Dear Drinking Water Laboratory Client,

A PDF file containing your analytical results has been attached to this e-mail.

Please do not reply directly to this e-mail. It is an automated account that does not respond to incoming messages.

Please contact the laboratory directly at (517) 335-8184 with questions regarding your report.

Thank you for using the MDEQ Drinking Water Laboratory.

Dear Drinking Water Laboratory Client,

A PDF file containing your analytical results has been attached to this e-mail.

Please do not reply directly to this e-mail. It is an automated account that does not respond to incoming messages.

Please contact the laboratory directly at (517) 335-8184 with questions regarding your report.

Thank you for using the MDEQ Drinking Water Laboratory.

Dear Drinking Water Laboratory Client,

A PDF file containing your analytical results has been attached to this e-mail.

Please do not reply directly to this e-mail. It is an automated account that does not respond to incoming messages.

Please contact the laboratory directly at (517) 335-8184 with questions regarding your report.

Thank you for using the MDEQ Drinking Water Laboratory.

525 W ALLEGAN
LANSING MI 48909

System Name/Owner:		WSSN/Pool ID:		
Collection Address:	NEITHERCUT ELEMENTARY,FLINT	Source:	Other	
Collected By:	TJD/GLK	Site Code:	CA3	
Township/Well#/Section:	//	Collector:	MDEQ DWRPD Staff	
County:	Genesee	Date Collected:	11/21/2015	08:41
Sample Point:	02KC001- DHHS OFFICE	Date Received:	11/23/2015	07:25
Water System:	Other	Purpose:	Other	

TESTING INFORMATION			REGULATORY INFORMATION			
Analyte Name	Result (mg/L)	Date Tested	RL (mg/L)	MCL/AL (mg/L)	Method	CAS #
Copper	0.22	11/24/2015	0.05	1.3	EPA 200.8	7440-50-8
Lead	0.002	11/24/2015	0.001	0.015	EPA 200.8	7439-92-1

The analyses performed by the MDEQ Drinking Water Laboratory were conducted using methods approved by the U .S. Environmental Protection Agency in accordance with the Safe Drinking Water Act, 40 CFR parts 141-143, and other regulatory agencies as appropriate.

Your local health department has detailed information about the quality of drinking water in your area. If you have concerns about the health risks related to the test results of your sample, please contact the Environmental Health Section through the address and telephone number listed below:

Dear Drinking Water Laboratory Client,

A PDF file containing your analytical results has been attached to this e-mail.

Please do not reply directly to this e-mail. It is an automated account that does not respond to incoming messages.

Please contact the laboratory directly at (517) 335-8184 with questions regarding your report.

Thank you for using the MDEQ Drinking Water Laboratory.

525 W ALLEGAN
LANSING MI 48909

System Name/Owner:		WSSN/Pool ID:	
Collection Address:	POTTER ELEMENTARY,LANSING	Source:	Other
Collected By:	TJD/GLK	Site Code:	CA8
Township/Well#/Section:	//	Collector:	MDEQ DWRPD Staff
County:	Genesee	Date Collected:	12/05/2015 13:15
Sample Point:	01CF001-RM22	Date Received:	12/07/2015 07:20
Water System:	Other	Purpose:	Other

TESTING INFORMATION			REGULATORY INFORMATION			
Analyte Name	Result (mg/L)	Date Tested	RL (mg/L)	MCL/AL (mg/L)	Method	CAS #
Copper	Not detected	12/08/2015	0.05	1.3	EPA 200.8	7440-50-8
Lead	Not detected	12/08/2015	0.001	0.015	EPA 200.8	7439-92-1

The analyses performed by the MDEQ Drinking Water Laboratory were conducted using methods approved by the U .S. Environmental Protection Agency in accordance with the Safe Drinking Water Act, 40 CFR parts 141-143, and other regulatory agencies as appropriate.

Your local health department has detailed information about the quality of drinking water in your area. If you have concerns about the health risks related to the test results of your sample, please contact the Environmental Health Section through the address and telephone number listed below:

Report To: STEVE BUSCH
525 W ALLEGAN
LANSING MI 48909

System Name/Owner:		WSSN/Pool ID:	
Collection Address:	POTTER ELEMENTARY,FLINT	Source:	Other
Collected By:	TJD/GLK	Site Code:	F01
Township/Well#/Section:	//	Collector:	MDEQ DWRPD Staff
County:	Genesee	Date Collected:	12/05/2015 10:55
Sample Point:	01CF047 - RM 35	Date Received:	12/07/2015 08:13
Water System:	Other	Purpose:	Other

Sample Comment LF94852 The sample was collected using a 125 ml plastic bottle.

TESTING INFORMATION			REGULATORY INFORMATION			
Analyte Name	Result (mg/L)	Date Tested	RL (mg/L)	MCL/AL (mg/L)	Method	CAS #
Copper	0.30	12/08/2015	0.05	1.3	EPA 200.8	7440-50-8
Lead	0.015	12/08/2015	0.001	0.015	EPA 200.8	7439-92-1

The analyses performed by the MDEQ Drinking Water Laboratory were conducted using methods approved by the U .S. Environmental Protection Agency in accordance with the Safe Drinking Water Act, 40 CFR parts 141-143, and other regulatory agencies as appropriate.

Your local health department has detailed information about the quality of drinking water in your area. If you have concerns about the health risks related to the test results of your sample, please contact the Environmental Health Section through the address and telephone number listed below:

Title	Modified	Modified by	
Potable Water for a remote Raw W...	8/20/2013 4:28 PM	Ashford, Stephen (DEQ)	New!

Subject	Potable Water for a remote Raw Water Pump Station
Body	DWEs, The newly formed Karegnondi Water Authority (KWA) will serve drinking water to Genesee County and Flint in the near future. The intake has already been permitted by yours truly. A raw water pump station is under design as we speak. Gary Williams of Jones & Henry Engineers called to ask what DEQ requirements would be to provide 35 gpm of potable water to the raw water booster station for drinking fountains and safety showers/eyewash stations. Jones and Henry proposed a well or SWT plant to meet this need. I told Mr. Williams about the nearby Lexington Worth Township Utilities Authority Type I CWS. He indicated there might be heart burn between LWTUA and KWA. If so, would a well or SWT plant design for 35 gpm and servicing one service connection be a type I or II system? My vote is no! What do you all think? Steve Ashford, P.E.

Potable Water for a remote Raw W...	8/20/2013 5:03 PM	Wozniak, Gary (DEQ)	New!

Body	My thoughts - So i take it that KWA and the raw station is not in the same general location so Rule 503 does not apply. Not a proposed type I or II. "might be heartburn" is no reason to not follow local ordinance, not provide the most safe water possible, or refuse the least cost effective solution in supplying the building with water (The City of Benton Harbor DPW garage is now served by the Benton Charter Twp. The heartburn has long subsided) Will the health dept even permit a SWT for a building if a well could be drilled? Hook them up to LWTUA. Take an antacid tablet --- **From:** Ashford, Stephen (DEQ)

Mike, open the agenda, attached to this email, for the meeting on the 10th, with GCDC/KWA. Location and time to follow. Matt Raysin sent all pipeline drawings to Jon last week. In your call to me you said you were gong to call Jon to confirm so he should have 30% plans by now. Any questions let me know.
More later.
John O'

Agenda
30% PS Review Meeting with MDEQ

Genesee County Drain Commissioner – Division of Water and Waste Services
Lake Huron Water Initiative – Contract S.4001 and S.4004
October 10, 2013
1:30 p.m. at GCDC-WWS offices

1) Technical Review

a) 30 % Project Design Report and Plan Review
   (a) Key and Critical Design and Construction Concepts, and Contracting Approach
      (i) S.4001
      (ii) S.4002
b)

2) Coordination Items

a) Pre-Purchase of Equipment Status and Discussion
b) Surge Status
c) Corrosion Status
d)

3) Permitting

a) Agency Comments or Concerns
b) Application Status
c)

4) Other Items

a) Design/Bidding/Construction Schedule
b)

5) Review Today's Action Items

6) Confirm Next Meeting—Tentative

a) 60% Project Review--November 20??

Subject: LHWI 30% plans - MDEQ Comments
Attachments: 30% Trans Main comments.doc

Jon & Steve,

Attached is the first draft of our comments put together concerning the 30% plans for the LHWI project. Jon, feel free to add or edit any of the comments as I combined some of the items you listed. Steve, I will plan on discussing these items tomorrow morning with you and show you some of our concerns on the plans. I may also edit the list tomorrow morning before I leave for the field – around 10:15am…..

Michael Prysby, P.E.
District Engineer
Office of Drinking Water and Municipal Assistance
517 290-8817

Lake Huron Water Initiative
Transmission Main – 30% Plans
MDEQ Comments
10/8/2013

- Contract S-4002 - (URS)

    1. Sheet 13.0; blow –off details: Concerns
       Connected to bottom of 66-in main – Access?
       8-inch Schedule 40 PE piping.
       Sheet 13 depicts two blow-offs, each with a different design.

    2. Air-vacuum releases are not all in best locations (high points). Some of these appurtenances are located at intermediate points along the pipeline.

    3. What is (are) the purpose(s) of the fire hydrants along the transmission line and why are the connections made at the mid-point of the pipeline?

    4. Average valve spacing is approximately 3.75 miles. This does not meet10-States Standards (1 valve/mile).

    5. Valving needs to be provided at the Black River crossing (vicinity of station 322+00 & 318+00). A blow-off should be provided at station 318+00 instead of an air-vacuum release valve. Is there consideration for corrosion protection of the steel transmission main at this location?

- Contract S-4003 - (LAN)

    1. The standard hydrant & valve details are not consistent with the other contracts.

    2. Proper valving is needed at the Jackson Creek crossing (Sheet 5.03).

    3. Proper valving is needed at the Sanilac Drain crossing (Sheet 5.19).

4. An air-vacuum release should be added near Sta. 1166+00 – Sheet 5.52.

5. Embridge Pipeline crossing – Sheet 5.60. Valving & cathodic protection near 1248+00?

6. An air-vacuum release should be added near Sta. 1310+00 – Sheet 5.66.

7. Sheet 5.68 – A portion of the transmission piping along and north of Hull Road back to the connection point between Contracts S-4003 and S-4005 is not depicted.

- Contract S-4005 (Wade-Trim)

1. An air-vacuum release is needed near Sta. 69+00 – Sheet 46

2. A drain/blow-off should be added near the Monroe Drain near Sta. 507+00 – Sheet 166.

3. The standard details/designs for the pipeline appurtenances (hyds, valves, air-releases) are not provided.

4. Valve spacing (3 valves total) of 3.8 to 4.9 miles does not meet10-States Standards.

5. Six standard hydrants are proposed – purpose(s) of these hydrants?

- Contract S-4006 (Rowe)

1. Sheet 62 – Trans Canada & Merit Energy gas pipeline cross near Sta. 745+00. Valving & cathodic protection at this location are not provided. Also, an air-vacuum release should be added near Stations 750+00 and 746+00.

2. Sheet 140 – Proper valving needs to be provided at the Flint River crossing – near Station 480+00.

3. Air vacuum release valves should be added near the following Stations; 719+00, 709+00, 692+00, 560+00, 545+00, 538+00, 513+00, 491+00, 473+00, 459+50, 448+00, 420+50, 405+00, 388+50, 356+00, 354+00, 345+00, 279+00, 263+00, 141+00, 123+00, and 57+00.

4. Five main line valves are provided with spacing between 3 and 5 miles. This spacing does not meet 10-States Standards. Also, what is the rational for the specific valve locations?

5. How will each section of pipeline be closed (protected) prior to connection with the pipeline in the adjacent contracts?

- Contract S-4007 (F&V)

1. Sheet C-5.34 - Cullen & Powers crossing – proper valving?

2. Sheet C-5.44 – Reigle Drain crossing – proper valving and provision for drain/blow-off?

3. Sheet C-5-80 – The standard detail for the valve off-set differs.

4. Blow-offs or mean to drain the pipeline do not appear to be optimally located at many of the pipeline's low points.

5. Pipeline appurtenances (air-release & hydrants) appear to be paired together at same location – explain.

6. How far upstream of the proposed 36X72 tap is next isolation valve on the 72-inch pipeline?
7. Many inconsistencies are noted with the pipeline appurtenances (air-release, hydrants, valves).

8. We are assuming that the city of Flint has had an opportunity to review the 30% plans for Contract S-4007.

General Comments:

There are many inconsistencies with the standard appurtenance details (air-vacuum release, blow-off connections, hydrants, and valving) between each contract. We are assuming that Genesee County intends to establish one standard set of details for all pipeline appurtenances.

Given the number of optimal air-vacuum release valve and blow-off locations, there are other locations (in addition to those listed above) where these appurtenances should be considered. There are also various locations where these appurtenances do not appear necessary. We will discuss these further as we review the plans in our meeting.

A total of 14 isolation valves are shown for the 66-inch pipeline (approx. 3.75 miles between valves on average). This does not meet the recommended valve spacing in 10-States Standards. Additional valving is needed at several important crossings (Black River, Embridge, Trans Canada, and others). The addition of these valves along with re-configuring the location of proposed valves will help attain a valve spacing closer to 10-States Standards.

Subject: LHI - 90% P.S. - MDEQ comments
Attachments: 90% P.S. comments.doc; 60% Flint Trans Main comments.doc

Attached are draft comments for the 90% submittal (IPS and LHPS) based upon our review and subsequent discussion. Feel free, as needed, to edit and/or provide any additional comments. As we discussed, I will contact Jon and Daryl tomorrow at 10am to further discuss our review comments pertaining to the LHPS. Following our discussion and receipt of any additional comments, I will prepare a final punch list for our meeting on Thurs. I will also forward a copy of the punch-list to Genesee County prior to COB tomorrow.

I also attached my comments pertaining to the 60% submittal (S-4007 -Flint pipeline) if there is an opportunity for further review of this portion of the project.

Lake Huron Water Initiative
Pumping Stations – 90% Plans
MDEQ Comments
1/8/2014

- Intermediate PS

1. A minimum of 7.0 MGAL of storage is proposed for the IPS with provision for additional storage. The KWA was to further explore the possibility of providing a larger tank (10 Mgal), what is the status of this?

    - What are the operating conditions (min/max operating level & pump control) of the storage tank?

    - The inlet/outlet piping configuration in the storage tank could cause short-circuiting. Internal baffling and relocation of the piping will minimize potential short circuiting.

    - Sheet P-1.12 What is the weir cone's maximum design overflow rate for the storage tank overflow?

    - The top of the storage tank is open. Raw water quality will be subject to degradation due to birds, geese, etc. Are there provisions to limit the potential degradation of water quality in the storage tank?

2. Sheet C-3.1 The proximity of the septic tank to the P.S. and generator may cause difficulties in working on the generator, P.S., or tank in the future. The septic tank should be located further away from the station.

3. Sheet C-6.8 shows provision to drain the meter chamber via. 3-in PVC drain to sump pump inside the pump station. Can the meter chamber drain line be directed by gravity to the detention basin?

4. The chlorine compound (initially sodium hypochlorite) has been changed to calcium hypo-chlorite – explain. What % strength solution will be achieved after dissolving the

calcium hypochlorite to maintain the preferred dosage? The use of granular chlorine will also be more operator intensive than liquid chlorine.

5. Microfiltration and UV disinfection remains proposed for the well which is to provide domestic and process water at the IPS. It was our understanding that this level of treatment was to be deleted since it is not required.

6. Sheet C-6.4 A concrete cookie that extended under the valve operating nut (shown in the 30% design) has been deleted – (Ref, Gate Valve Off-set detail).

7. The project design report (Page 14) references use of pilot controlled electronic control valve; however, Sheet C-6.7 shows a pressure sustaining valve for the backpressure chamber. Means to drain the backpressure chamber?

- Lake Huron P.S.

1. Sheet C-4.5 Will the flap gate valve at the bottom of10 ft catch basin perform adequately under freezing conditions?

2. Sheet C-4.6 A concrete cookie that extended under the valve operating nut (shown in previous design) has been deleted – (Ref, Gate Valve Off-set detail).

3. Sheet C-4.7 – means to drain the combined air release and air-inlet valve vault? The air release-inlet vent also needs to face downward and be screened.

4. Sheet C-5.3 – We are assuming that the air vent piping is connected to the air release/vacuum relief valve. Means to drain the valve vault?

5. The hydraulic calculation table and pump curves (Appendix B) are based on 1 pump @ 30 MGD and 3 pumps @ 60 & 70 MGD. The table continues to

reference wet well elevations with 3 pumps on and 5 pumps on. What is the projected wet well elevation with 1 pump on @ 30 MGD? Also, which wet well elevation (max, min, or avg.) is used in establishing the hydraulic profile on Sheet P-1.3?

Lake Huron Water Initiative
Transmission Main – 60% Plans
MDEQ Comments
1/2/2014
Contract S-4007

1. Sheet 8.0 – ARV/AIV – relief/inlet piping needs to point downward & be screened. Means to drain vault?

2. Sheet 12.0 – Will hydrants be plugged? Standard specs imply plugged hydrants; however, unplugged hydrants were discussed in most recent meeting. Hydrants also need to be designated as "non-potable" .

3. Sheet 30 – An ARV and an air release hydrant are located within 100 feet of each other.

4. Sheet 38 – Location of hydrant blow-off not at lowest point.

5. Sheet 57 – Add hydrant blow-off (A) near Sta. 364+00 – 365+00.

6. Sheet 59 – Remove ARV comment at Sta. 380+08.

7. Sheet 60 – Is ARV necessary at Sta. 395+50?

8. Sheet 65 – Add hydrant blow-off (A) near Sta. 448+00.

9. Sheet 66 – ARV & air release hydrant approximately 50 ft apart. Also, the location does not appear optimal.

10. Sheet 71 – ARV & air release hydrant are provided in vicinity of drain near Irish Road. A hydrant blow-off appears more suitable.

11. Sheet 75 – Location of ARV does not match between plan & profile view. Profile view offers more optimal location.

12. Sheet 80 – Location of ARV does not match between the plan & profile view.

13. Sheet 81 – Is an air release hydrant needed immediately west of Vassar Road?

14. Sheet 86 – Two air release appurtenances are located in the same proximity.

15. Sheet 94 – Add a hydrant blow-off near Sta. 699+50.

16. Sheet 98 – Add a hydrant blow-off near Sta. 737+50.

17. The master meter pit details are referenced on Sheet 15; however, Sheet 15 was not included in the 60% plans.

Lake Huron Water Initiative
Contract S-4005
Transmission Main – 100% Plans
MDEQ Comments
6/16/2014

1. We have not received the updated pipeline surge analysis. The updated analysis will need to include the revised listing (size and location) of the air release structures. The analysis also needs to confirm justification of the selected pressure classification (Class 150 for the S-4005 contract).

2. The leakage formula provided in the Leakage Test (Section 02513-18 of the Project Manual) is an outdated AWWA standard for DI/PVC piping. The allowable leakage for steel transmission main needs to be based from the AWWA Standard C-604-11 Installation of Buried Steel Water Pipe – 4-in and larger (Sec. 5.2). The leakage test pressure must also not exceed 125% of the anticipated working pressure.

   * The above leakage formula may be in the Project Manual for the other KWA pipeline contacts (S-4002, 4003, and 4006) and will need to be corrected.

3. Sheet 133 – Station 851+35 depicts a standard hydrant; however, the profile view shows the location of the tap at the top of the main (air-release application) and also notes “tee turned up”. Please explain.

Steve,

Thanks for the table. Flint passed the info on to me earlier today.

I see a discrepancy between your table and Flint's records and we have used Flint's data in the report. I have double checked the lab results and I believe the error is on your end, but that is something to resolve. I've attached what I believe is correct. We have already printed and sent out the report since it is due to you guys Sunday. Samir is hand delivering and will probably be by soon.

Here are the DBP results. Everything is great, but this still leaves us in violation at 3 sites, as shown in the other attachment.

Dear Drinking Water Laboratory Client,

A PDF file containing your analytical results has been attached to this e-mail.

Please do not reply directly to this e-mail. It is an automated account that does not respond to incoming messages.

Please contact the laboratory directly at (517) 335-8184 with questions regarding your report.

Thank you for using the MDEQ Drinking Water Laboratory.

Mike,

Does Genesee County have naturally high Fluoride levels? See the attached reports sampled by Highland Treatment and note the fluoride levels in the partial chem samples.

Importance: High

Brad,

Take a look at this (note it is from 2012 and involves many of the same players). It may help frame the context of what is going on and that it is not suddenly an issue.

Subject: Flint Supplemental

The Senate just passed House Bill 4102 and inserted a $100 placeholder for DEQ and DHHS for the "City of Flint Emergency Water Services." In talking to DHHS and SBO, DHHS already has spending authorization so we can simply transfer the revenue (a supplemental is not needed). I just wanted to make sure you are aware the bill is moving. I will leave a copy of the supplemental in your office or with Mary Beth.

DWSD and STATE OF MICHIGAN ISSUES
March 14, 2012

I. Flint & KWA

Flint has been a contract customer of DWSD since 1965. The original 35-year contract term expired in 2000, but service continues under the terms of the original contract, pending notification to terminate (the contract requires a one-year notice) from either party. The original contract contained estimated annual volumes for every year covered by the contract, and contained a "take or pay" provision equal to one-half of the estimated figures. In 1990, after Flint's failure to purchase up to 50% of the estimated amounts in the contract, DWSD and Flint negotiated an amendment that lowered the annual estimates, but left all other terms intact. Flint sells DWSD water to Genesee County on a wholesale basis via terms of an agreement between those two parties that was originally dated 1973, with a 2013 expiration date.

(a) KWA

Genesee County has been exploring alternative sources of water for a decade. That effort is led by the County Drain Commissioner Jeff Wright. The Karegnondi Water Authority (KWA) was established to more formally coordinate the evaluation of water supply alternatives. KWA consists largely of Lapeer County, Genesee County and Flint. The KWA project involves a $600,000,000 investment to pump and transmit raw water from Lake Huron to Flint. Even KWA acknowledges it is not a better financial arrangement than DWSD for the next 30 years. KWA is presently requesting Flint to agree to participate in a $10,000,000 engineering study and reports construction could start late 2012 or spring 2013.

DWSD has not ignored this effort. Instead a technical and financial committee consisting of KWA and DWSD representatives has been working cooperatively to DWSD / Flint / Genesee County for various options for the authority. DWSD Director McCormick and BOWC Chair Fausone have met with Mr. Wright and Flint financial manager, Mr. Brown, since the new year.

The KWA communities comprise about 6 percent of the DWSD water revenue structure. DWSD and its customers (through the TAC, etc.) have expressed a desire to keep the KWA communities "on board", but have been reluctant to pursue alternatives which would do so at a cost to other customers more than the 6 percent revenue requirement increase that would occur if DWSD just let them leave.

(b) Capacity

Through its five water treatment plants DWSD has the capacity to produce up to 1.7 billion gallons per day (bgd) of water – but current demand levels are closer to 1.0 bgd. DWSD has a large amount of available "excess" production capacity, which has contributed to recent rate increases – DWSD has maintained this capacity as water demands and sales have dropped.

DWSD's new capital improvement plans, and the mission of the upcoming master plan update, are seeking the best manner to "downsize" capacity and still meet service levels to the entire Southeast Michigan region. At the same time, the "independent" KWA plan seeks to unnecessarily add new water production capacity of approximately 60 to 80 million gallons per day (mgd) to the region, while taking that demand away from the DWSD system. Clearly, this is not an efficient nor strategic investment of public dollars in the region.

(c) Impact and Compliance

At DWSD water supply and sewage disposal functions are so fundamentally intertwined as to be inseparable. Administration, finance, procurement, maintenance, security, metering, customer service and billing, enterprise system investments, programs and initiatives that are essential for one utility function are also required for the other. The Water / Sewer Rate Interrelationship is based on the reality that DWSD is a unitary department that manages and operates both Detroit's water system and its sewer system. The extent that DWSD resources and facilities directly serve both the water and sewer systems is apparent in that only approximately 40 percent of DWSD employees perform "solely water" or "solely sewer" functions. These employees are primarily located at the treatment plants. The remaining 60 percent carry out activities that benefit both systems. The costs of these resources and facilities are shared between the two utility systems. The water rates provide the funding mechanism for the water system's share and the sewer rates provide the funding mechanism for the sewer system's share. The ability of the sewer system to carry out its mission and achieve long term compliance with the Clean Water Act is directly impacted by the ability of the water system to provide its share of the funding for these resources common to the water and sewer systems.

DWSD is requesting the State, which has appointed a financial manager for Flint, consider a regional approach to decisions of water and sewerage services. The State should not encourage or authorize DWSD customers to cannibalize the existing system, and to add additional regional debt thereby increasing the pressure on DWSD's customers to support existing debt and operations.

II. Distressed Communities and Customers

In recent years, the global economic issues have had a significant impact on Southeast Michigan and DWSD. With significant loss of water use (sales) and the commensurate sewer use (sales), rates for both services have risen substantially to cover costs associated with past and current capital investments. Compounding the decline in sales is the increasing bad debt on the systems from both Detroit and customer communities.

Detroit Public Schools and Highland Park, both under State oversight, are in significant arrearage to DWSD. The DPS accounts receivable is approximately $11,000,000. The Highland Park account receivable is at $9,576,165.

In recent months, the problems in Highland Park have resulted in the State approaching DWSD to assist Highland Park due to potentially significant public health issues in their drinking water system.

Other Southeast Communities are also demonstrating an inability to pay DWSD for services provided to their communities. In addition to Highland Park, six additional DWSD customer communities including Inkster and Hamtramck have increasing past due amounts. For example, the City of Inkster, which has recently received State funds "to keep the lights on", owes DWSD $1,595,844. Additionally, the City of Detroit which is undergoing financial review by the State has a general fund arrearage to DWSD of approximately $8,000,000.

It is quite likely DWSD will be asked to assist or manage some or all of the failing community's water and waste water systems because DWSD is uniquely positioned to do so. We recognize the critical role DWSD might have in these issues. However, it is quiet ironic that the State would seek DWSD's assistance through assuming responsibility for failing systems, and the economic risk that goes with that, at the same time the State would allow or facilitate DWSD's largest customer to exit the system. Add to this that the most significant outstanding debt owed DWSD are communities under State oversight or on the watch list. These actions in total are of significant detriment to DWSD, further hampering DWSD's ability to address investment necessary to effect long term compliance.

DWSD is requesting the State require distressed communities, and entities under State control, to pay for services provided and to consider water and sewer issues in its regional decision.

Andy,

I have checked with multiple staff from both the Drinking Water Program and the Water Resource Division today. Their comments to me today are the same as before. KWA saves money if they separate.

>
> Hi Bill,
>
> From a capacity standpoint, supplying KWA is completely feasible under either proposal with no adverse impact to the rest of the DWSD supply network. The proposal lists KWAs contracted max day demand at 40.6 mgd, the design and rated capacity of the Lake Huron Plant is 400 mgd. The DWSD service area average and max day are about 650 and 950 mgd; the other four water plants combined have a rated capacity of over 1100 mgd.
>
> I don't know the details of the cost analysis other than what has been reported by DWSD. It is my understanding that over the 30 year pay back period that full service water provided from DWSD would be more a lot more expensive than what KWA has projected if they separate. Several intermediate proposals of varying cost estimates have been presented without success. KWA was issued a permit last fall for constructing an intake (independent of DWSDs) and I think the plan is to start construction as early as this fall. Then a treatment plant would be constructed to treat the water. Flint has a water plant that draws raw water from the Flint River, but the plan would be to purchase raw water from the KWA intake and treat at their plant, using the River as a backup source. KWA has estimated a project cost of $274 million, DWSD estimated the project cost at $375 million; but I don't know exactly what the scope of work was for those estimates so I'm not sure that it's an apples to apples comparison.

Overall, besides the know impacts to DWSD for loss of revenue and increased cost to the rest of the system users to cover fixed cost, debt, etc., there could be other systems revisiting their proposals to separate. Grosse Ile and a few surrounding communities had looked into forming a water authority and building a plant to serve them; Grosse Pointe Park had submitted incomplete plans a few years back to build their own microfiltration plant. At one point, Grosse Pointe Shores was considering a study to see if they could re-work the Grosse Pointe Farms network to purchase water from them rather than DWSD through GP Woods.

Let me know if you want to discuss this further.

thanks,
Laura

Subject: RE: KWA and City of Flint

Director Wyant, Deputy Director Sygo, and Liane,

A response at this point may be moot as Flint and Genesee Co. already held a press conference yesterday rejecting the DWSD offer.

It is also unclear whether DWSD provided its offer directly to Flint and Genesee Co. by the deadline in Treasurer Dillon's letter. However, Flint and Genesee Co. still took the offer under consideration.

Our office concurs with both Flint and Genesee Co. that the offers provided by DWSD were incomplete.

Of the two scenarios provided by DWSD it appeared that only Scenario 2 was listed as potentially being more cost effective. However, this scenario did not address the following:

1. The DWSD scenarios are based on 40 MGD of service capacity. However, the KWA project is providing 60 MGD of initial capacity with potential expansion to 75 MGD in the future. Therefore, in order for a more direct comparison the DWSD scenario would need to increase capacity to 60 MGD, which would increase fixed rate commodity costs as well as the capital costs for the Huron Plant that DWSD was planning to allocate to Flint and Genesee Co., presumably by as much as 50%.

2. DWSD proposals cover a 30 year period to 2042, but fail to recognize that after this period bond payments for the KWA project will be complete and result in a significant reduction in costs for the KWA option.

3. While DWSD indicates that Flint and Genesee Co. would be given "broadened representation", it remains unclear exactly what this means in terms of actual control in the decision making process.

4. This scenario continues to rely on a single transmission system and would require the City of Flint to maintain its WTP for emergency purposes and these costs do not appear to be included. In addition, use of the Flint WTP as an emergency backup would leave Genesee Co. without an adequate backup supply to meet their 30 year needs.

Again, without DWSD providing the specific details of these proposals, it is difficult to provide a true comparative analysis, and as such Flint and Genesee Co. appear to be justified in their rejection of these proposals.

Please let me know if you require any further response.

Subject: Flint Site 5 Boil water advisory documents

Gentlemen,

Attached are the boil water advisory public notice with all required language and a map of the impacted zone. Please distribute to your media contacts immediately.

Once we have 2 sets of non-detect samples from the impacted area we can discuss lifting the advisory.

You indicated that flushing of the area has already started.
Please ensure the water system is taking investigative steps to identify a possible source

- Inspect storage facilities
- Verify pumping and treatment system remains intact and uncontaminated
- Inspect cross connection accounts in the affected area
- Survey the area for any unidentified cross connections
- Review any recent construction or maintenance in the area

- Check for building permits and with building inspectors for any recent construction in the area
- Check with fire departments and DPW for any temporary or improper hydrant use
- Review pumpage and check for breaks, leaks, or an uptick in unaccounted water loss
- Ensure any vacant properties have had the water service shutoff
- Review Cl residual data, conduct additional Cl monitoring, and increase disinfectant residual

I will be in contact with the County Health Department and the MDARD Food and Dairy Division.

You can reach me over the weekend at this number or Mike Prysby at his number.

Just a heads up that we've been in contact with Treasury regarding water treatment options for the city of Flint.

From: Prysby, Mike (DEQ)
Sent: Wednesday, January 23, 2013 10:01 AM
To: Bloemker, Jon (DEQ); Busch, Stephen (DEQ); Benzie, Richard (DEQ); Shekter Smith, Liane (DEQ)
Subject: Flint - Dept of Treasury

I spoke with Mr. Randy Byrne from the Dept. Treasury – Office of Fiscal Resp. concerning the Flint WTP. Below is a brief summary of our discussion. I can fill you on more details this afternoon just prior or immediately after our KWA meeting.

Q1: The city of Flint has considered using the Flint River as a source of drinking water to be treated at their WTP; however,

The city may be somewhat reluctant to use the river as their source, what is your assessment of this issue?

A: The city could utilize the Flint River ranging from 100% utilization – to a certain percent blending (either Detroit or KWA) or

zero percent utilization of the river. I agree that the city should have concerns of fully utilizing the Flint River (100%) for the following; the need to soften, the potential for more advanced treatment after next round of crypto monitoring, available capacity in Flint River at 100-year low flow, residuals management (disposal of lime sludge). As the percent utilization of the river decreases (blending options), the need for softening, residuals disposal, capacity issues do not pose as much of a concern.

Q2: When comparing the treatment of Lake Huron water vs. Flint River water, are more treatment chemicals needed to effectively treat the water?

A2: Flint river water will require a larger amount of primary coagulant (Ferric) due to poorer raw water quality than Lake Huron water. Also, a different type of primary coagulant (Alum) may be more suitable for the treatment of Lake Huron water. I can confirm that based on what the Detroit Lake Huron WTP uses. Also, since softening would need to be employed, treatment compounds including lime, soda ash, and carbon dioxide would be necessary.

Q3: If the city needed to borrow money to be able to operate full time (KWA or blending), does the DEQ offer funding via the DWRF?

A3: The city could apply for DWRF funding and their eligibility would be based upon how well they score in the overall DWRF ranking process. Also, the total amount of the loan and their ability to repay the loan would be considered.

Q4: Flint has put forth a significant capital investment over the past 10 years to maintain their WTP, is the condition of the WTP sufficient for full time treatment of raw water from Lake Huron ? Are the operators qualified to operate the WTP?

A4: The Flint WTP has demonstrated its ability to treat raw water (Flint River) and meet the drinking water standards based on quarterly test runs since 2009 and two pipeline emergencies that occurred in 2009 where water from the WTP was distributed to the city. Successful operation of the WTP on an intermittent basis is difficult. WTP operators face the constant challenge of maintaining WTP components in good working order while the plant is normally out of service over 90% of the time. The reliability of WTP and its components are better maintained through continuous operation. The operating experience and knowledge of the operators is also better established with full-time operation. WTP operators have the required operator certification and are very familiar with the operation of the Flint WTP, meeting drinking water standards, and troubleshooting operational problems. The Flint WTP is capable of meeting the drinking water standard if the plant was utilized to treat raw water from Lake Huron.

Q5: Do you see any weak links in the WTP or significant improvements if the WTP were to be fully utilized?

A5: I would not see any major treatment changes or additions needed if Lake Huron water was utilized; however, in order for the city to fully utilize its storage capacity, a pumping station would need to be added immediately after the WTP such that treated water can be pumped into the city's 20-Mgal Dort reservoir. In the current configuration, water from Detroit flows by gravity through this reservoir and then into the WTP's 3 Mgal reservoir followed by pumping via Pump Station No. 4 into the city's distribution system. Improvement in stand-by power may also be necessary. Finally, if a component of Flint River water were to be treated, then more advanced treatment based upon higher bin classification (UV disinfection, etc.) could be required based upon crypto. results.

Subject: RE: 2014 Communications planning

Mostly, but realize that information is only as good as staff chose to describe in their permits. Water main is tracked pretty well, but some permits are for multiple facilities or components that make it difficult to parse it into separate categories or query. We can only try it and see what we get. Kris could give you more info.

Subject: RE: 2014 Communications planning

If we could quantify construction permitting for FY13, not just number of permits, but water main footage, tanks, wells, treatment facilities, it could help highlight our impact on economic development and the need for water service. If we also take into consideration our average permitting time, this would then also touch on our customer service effort.

ODWMA came up with a few suggestions:

Stormwater Asset Management & Wastewater (SAW) Program

DEQ was able to plan and develop the new SAW Grant & Loan Program. Enacting legislation was signed on January 2, 2013. Applications for funding were available in October 2013. SAW will award $97M in the first year.

Asset Management Training

Over 500 people attended Asset Management Training provided by the DEQ. The training was designed to provide relevant and timely information to drinking water and wastewater municipal systems.

The issuance of construction permits to the KWA for the installation of Lake Huron Intakes (south of Lexington) to provide water service to Genesee county and Flint.

Issue of construction permits to Bay County for the construction of a new WTP using the Saginaw-Midland Municipal Water System as a source (Lake Huron versus Saginaw Bay).

Successfully rolled out the new Stage II Disinfection By-Product Rule to District Systems, providing technical assistance in the form of draft sampling plans and personalized consultations to ensure that the new rule was implemented smoothly.

The Michigan Groundwater Management Tool (MGMT) is a software platform that was developed in a Joint Funding Agreement with Michigan State University. MGMT utilizes spatially compiled groundwater data and allows for the automated analysis of ground water flow. MGMT now allows us to provide delineations at no charge for the smaller community and non-community water systems. Most of these MGMT delineations closely parallel traditionally developed Wellhead Protection Areas (WHPA's), which cost an average $36,000. In fiscal year 2013, almost 1800 public water supplies had provisional delineations completed by the MGMT at no cost. The provisional delineations identify these WHPA's and are the first critical step in protecting drinking water sources.

A total of 2416 drinking water operators trained in DEQ or jointly sponsored training classes.

Importance: High

Greetings, all. We're moving toward a great 2014, where we will be doing more strategic communication and impactful storytelling.

As we prepare the departmental communications plan, I need your input. The Director has tasked me with collecting 2013 Accomplishments from each of the divisions and districts.

I don't need a book. Half a dozen of your top accomplishments on the year would be very helpful. One liner with a few sentences.

I need these by Dec. 6, in preparation for an off-site planning meeting Dec. 9.

If you have questions, please get in touch with me directly. THANK YOU, and happy holidays.

Brad Wurfel

Communications Director

Subject: RE: 2014 Communications planning

15 well improvement projects with a total related capacity of 4541 gpm (6.54 MGD).

The turnaround time averages for the total 770 permits:

Received to Issue = 16 days avg.

Admin. Complete to Issue = 11 days avg.

Mostly, but realize that information is only as good as staff chose to describe in their permits. Water main is tracked pretty well, but some permits are for multiple facilities or components that make it difficult to parse it into separate categories or query. We can only try it and see what we get. Kris could give you more info.

If we could quantify construction permitting for FY13, not just number of permits, but water main footage, tanks, wells, treatment facilities, it could help highlight our impact on economic development and the need for water service. If we also take into consideration our average permitting time, this would then also touch on our customer service effort.

We do good work.

One thing missing from the list below was Chuck's note that one of our accomplishments should be that no serious public health problems arose in the public water supply program in the past year. However, it is difficult to quantify "nothing bad happened."

ODWMA came up with a few suggestions:

Stormwater Asset Management & Wastewater (SAW) Program

DEQ was able to plan and develop the new SAW Grant & Loan Program. Enacting legislation was signed on January 2, 2013. Applications for funding were available in October 2013. SAW will award $97M in the first year.

Asset Management Training

Over 500 people attended Asset Management Training provided by the DEQ. The training was designed to provide relevant and timely information to drinking water and wastewater municipal systems.

The issuance of construction permits to the KWA for the installation of Lake Huron Intakes (south of Lexington) to provide water service to Genesee county and Flint.

Issue of construction permits to Bay County for the construction of a new WTP using the Saginaw-Midland Municipal Water System as a source (Lake Huron versus Saginaw Bay).

Successfully rolled out the new Stage II Disinfection By-Product Rule to District Systems, providing technical assistance in the form of draft sampling plans and personalized consultations to ensure that the new rule was implemented smoothly.

The Michigan Groundwater Management Tool (MGMT) is a software platform that was developed in a Joint Funding Agreement with Michigan State University. MGMT utilizes spatially compiled groundwater data and allows for the automated analysis of ground water flow. MGMT now allows us to provide delineations at no charge for the smaller community and non-community water systems. Most of these MGMT delineations closely parallel traditionally developed Wellhead Protection Areas (WHPA's), which cost an average $36,000. In fiscal year 2013, almost 1800 public water supplies had provisional delineations completed by the MGMT at no cost. Subject: Genesee County - Proposal for regional system

Just wanted to follow-up a meeting we (Sonya Butler, Kelly Hoffman, and I) sat in on last week with Genesee County to discuss the new water authority and their plans for a regional system with Lapeer County, Sanilac County, the city of Lapeer, and the city of Flint.

In general, they took the opportunity to describe for us their master plan. We discussed options for revolving loan dollars. In addition, they asked if we (the community water supply program) could coordinate the reviews for permitting that would be needed in light of the fact that the project will be crossing district boundaries.

I think it will be helpful if we could discuss via a conference call. Since everyone was out last week at the Section meeting, I haven't had a chance to coordinate the conversation yet. Thought I'd share this note to get you thinking about issues you might see on the horizon.

Laura – I've included you since the Detroit system is obviously impacted by any proposal that is being discussed. They indicated in the meeting that they had reached an agreement (or at least a meeting of the minds) with the city of Detroit regarding a couple of options available to them relative to proceeding with the proposal. Perhaps you've heard something from the city that might shed some more light on this.

Veronica could you please set up a call for us. Friday morning looks good for me. It might have to wait until next week depending on calendars.

Kelly – would it be helpful for you to participate in the call in order to hear the discussion from the program side? They may also have questions for you.

Liz,

We still haven't heard anything from Flint on this….the city is very undecided on the direction to proceed and given their financial situation, this decision is even more difficult. I would not be surprised to see a city official (as part of the WTP visit) take the opportunity to pitch this concern to the Director.

Very true – the Director really appreciates getting an understanding of DEQ programs, so any points you can work into the conversation (including the back-up requirements) will most likely be of interest – we all want to feel good about our drinking water. He lives in EL, so if you want to compare 2 plants (Flint and another) during the tour, East Lansing may be the way to go. What is the latest on Flint wanting to go it alone or to blend?

Liz,

It may also be worth to stress the importance of the Flint WTP since the facility is city's only back-up source of drinking water in the event that the 72-inch pipeline from DWSD is taken out of service for emergency repair. The WTP played in critical role in maintaining a potable supply of drinking water thus protecting public health for over 100,000 people during two pipeline outages in 2009.

You will be able to mention your recent successes in getting some of your small plants shut down and the transition to a more reliable water source as part of your event. It might be especially good to mention it in front of Brad Wurfel (as he has not responded to my earlier note on the subject). I know it is the Flint versus Genesee plant you are visiting, but it is still a good story. There are often also legislators in attendance and they should appreciate how you have worked to protect their constituents!

I would like to inform you of the Director's visit to the city of Flint that is being arranged with the assistance of Ben Hall. Following a morning meeting in Flint, the Director plans to visit several Flint facilities during the afternoon. I offered up the Flint Water Treatment Plant as one of visits. I also confirmed with the WTP OIC that the treatment plant will be conducting a routine plant test run at this time. I plan on attending since I oversee the Flint WTP and I will also invite other LDO drinking water staff to attend as their schedules allow. I will inform you as to the time of the visit as soon as I am informed.

Yes. This project will decrease the Dwsd drinking water revenue, although the city has been all over the board on this issue. Please remember that this withdrawal has only been permitted for drinking water supply so far, with nothing for agricultural use.

Subject: RE: Highland Park
Attachments: Highland Park Determination and Order2nd response letter -KD Revised.doc

Attached is the letter with a couple minor wording changes. Otherwise it sounds good to me.

I have not heard anything about the treasury meeting either. Abu and I visited the plant Monday evening and conditions continue to deteriorate. There were about 5 days last week that they were unable to collect samples from the filter confluence point (compliance point) due to a watermain break nearby that flowed continually thus lowering their reservoir level and subsequently causing the sample pump to lose its prime. Thankfully samples were being collected at each filter effluent and at the plant tap (on either side of the malfunctioning point) that demonstrated turbidity was meeting standards. The clarifiers are filling with sludge and also have a 0.5-1" thick layer of floating sludge that developed over the course of a week. This has happened before and they have removed it using pool skimmers. We asked them to work on that this week. Filters are requiring backwash every 8-16 hours instead of every 24-36. They have airbinding in the filters that is likely a result of air in the system due to pump change in service. It could also be due to the poor state of the filter media. There are so many things wrong it's hard to pinpoint the cause of any one thing at times. Abu and/or I will visit the plant each week to check on turbidity readings and contractor progress as well as pick up copies of their bench sheets listing turbidity results and calibration records. I want to keep a close eye on turbidity levels until the clarifier/turbidimeter work is completed. We looked at the valves that need to be fixed on the clarifiers and the contractors are aware of what they need to do. I'm glad that the work is happening now, because the clarifier situation is deteriorating.
Thanks,

Kris

No.

But I thought this was interesting. I heard on NPR yesterday that Treasury is meeting with Flint regarding their water supply plans/options and I understand that DWSD is also supposed to attend.

Thanks Liane. I was waiting to hear from you and Kris before I ran it by John Scherbarth. Last time I talked to John he asked about a response to the DWSD letter to Treasury. Has there been any communication from Treasury; do we know if they met with Sue McCormick?

I have one minor suggestion which I highlighted (track changes was being persnickety).

Did we/should we run this by John S. before it's finalized?

Kris – anything you wanted to add? Change?

Attached is a draft letter to the City addressing the work the City has started on the clarifiers, the turbidimeter work that is next on their to-do list, and holding all other compliance dates in abeyance as the City continues to work towards a contract with DWSD. Please review the letter and let me know if there is anything else you would like to see in it. Thanks.

Subject: RE: Water Plant Mothballing

I have only been involved with two plants temporarily to permanently shutting down. When Flint was test running their plant twice per year, they would shut down temporarily for six months. Flatrock had a temporarily shut down that became permanent.

Remembering these procedures, I believe you are on the right track. Definitely, remove all chemicals from lines and feeders. I would strongly recommend getting ALL the chemicals out of the treatment plant. The chlorine cylinders definitely should be relocated for the sake of security. The activated carbon and fluorosilicic acid are disasters waiting to happen. The PAC is a fire hazard. The fluorosilicic acid is a spill and bio hazard. They may want to look at how to properly dispose the chemicals. I don't think there is anybody in their right mind wanting old chemicals from the Highland Park WTP.

Drain ALL the sludge and water from the sedimentation basins and sludge lines.

In both of the other shut down cases, water was kept in the filters at least to the height of the top of the media. In Highland Park's situation, I say drain the filters and all associated lines in the filter gallery completely.

Other major issues are the raw and finished water reservoirs. The raw is self-draining at the expense of the neighbors. The finished water reservoir may be another story.

Other issues are plant security and structural stability. The scrappers and thieves would have a field day. The city may want to have the power to the plant shut off, and they may want to think about the transformers.

Let's talk about the issue tomorrow and Thursday.

Subject: Water Plant Mothballing

Highland Park wants to "properly" shut down their plant and keep it in reserve in the event they are able to generate enough funds to fix everything and reopen it in the future. I need to give Highland Park some recommendations on how to go about the shutdown. I was thinking dewater/dry everything out, winterize, remove chemicals, and then safely secure the property. In reality there is not much to preserve but they want to go about the shut down the right way. Has this been done before in michigan? Do you have any other recommendations/thoughts?

Thanks!
Kris

Drinking Water Budget

Category	2012	2013 Projected	2014 Projected
Federal Grants	$8,458,600	$8,830,300	$9,306,900
General Fund	$1,207,200	$1,240,700	$1,275,000
Fees	$4,041,600	$4,010,800	$4,091,000
DWRF Loans	$29,191,000	$27,900,000	$25,000,000
One Time Relief*	$31,300	$0	$0
Total	$42,929,700	$41,981,800	$39,672,900

* One time relief provided to offset the first year of costs for Other Post Employment Benefits (OPEB)

Sequestering

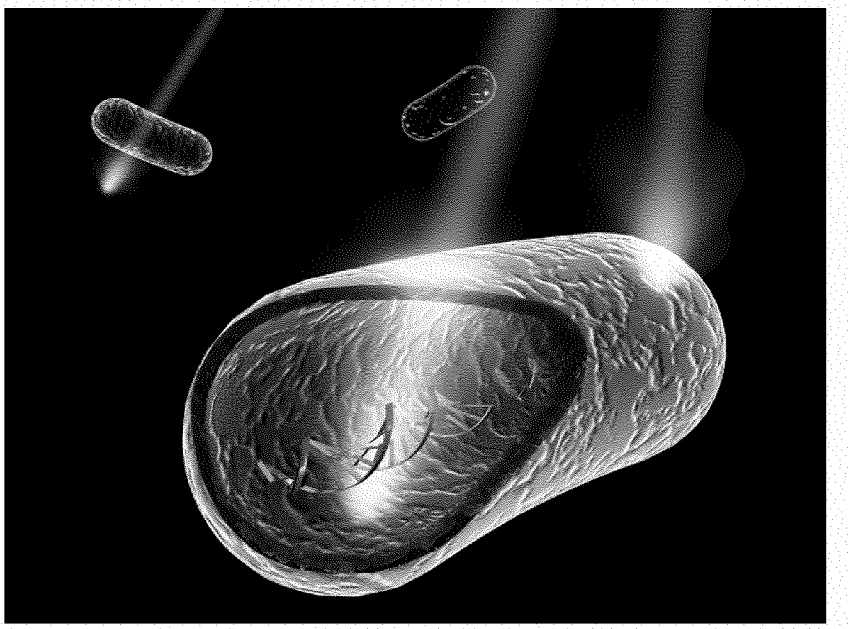
- The program incurred a 5% federal fund reduction in FY 2013
- FY 2014 sequestration impacts are unknown, but there is the potential for an 8% - 12% reduction. This reduction will be taken from the already reduced levels of funding in FY 2013.

SDWA Rules Corrections

- Effective June 15, 2013
  - Corrected Citations
  - Corrected Spelling

Next Rules Package

- Promulgation of RTCR by 2015
  - Stakeholders Meetings
    - Starting August 2013



Operator Certification Program

- Fees
  - Renewals
  - Examination
- Split of Drinking Water & Waste Water programs
- Program moved to Community Water Unit

Revised Total Coliform Rule (RTCR)

- Published in Federal Register on 2/13/13
- Applies to all Public Water Supplies
- Compliance date is April 1, 2016

FEDERAL REGISTER

Vol. 78 Wednesday,
No. 30 February 13, 2013

Part II

National Primary Drinking Water Regulations: Revisions to the Total Coliform Rule: Final Rule

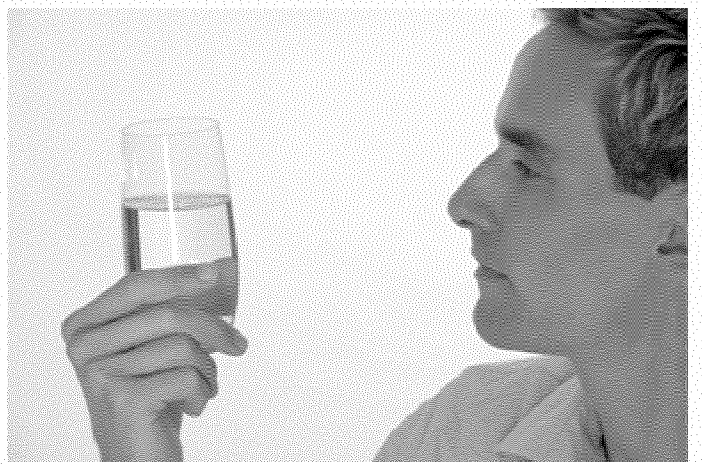
[Speaker Notes For Slide: 21]

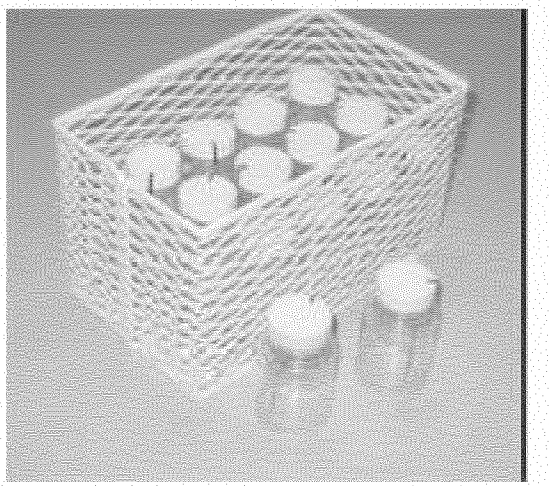
The Revised Total Coliform Rule (RTCR) was published in the Federal Register on February 13, 2013. Similar to the original 1989 Total Coliform Rule, the revised rule applies to all Public water supplies, including all Community and NonCommunity systems.

The compliance date is 3 years away. The official compliance date is April 1, 2016.

Many of Same Core Elements

- Routine Monitoring
- Repeat Monitoring
- Approved Sampling Site Plans
- Analytical methods
- Public notice requirements





[Speaker Notes For Slide: 23]

The revised rule contains many of the same core elements as the original rule.

The revised rule requires water systems to conduct routine monitoring based on the population served, collect repeat samples when a positive result is reported, prepare and obtain approval of a Sampling Site Plan, and requires Public Notice for certain violations or monitoring errors.

Key Monitoring Provisions of RTCR

- Maintains the routine sampling structure of TCR
  - # samples collected still based on population served
- Reduces the required number of repeat and additional routine samples for systems ≤1,000 in population
  - Will not need to collect 4th repeat sample
- Allows systems to modify repeat sampling protocol
  - Can change repeat sample locations and the time frame they are collected
- Systems are still responsible for developing sample site plans which the state reviews and approves

[Speaker Notes For Slide: 25]

Some of the key monitoring requirements in the new rule are:

Routine sampling basically remains the same, in that the number of samples collected every month is still based on population served.

For small systems serving a population less than a 1,000, it reduces the required number of repeat and additional routine samples. As an example, small systems will not need to collect a 4th repeat sample following a positive result and may not have to collect a minimum of 5 samples the following month if approved by the state.

The rules also allows systems to modify repeat sampling protocol. Systems can change repeat sample locations and the time frame they are collected, also if approved by the state.

One point to keep in mind is that systems are still responsible for developing sample site plans which the state reviews and approves. The plan will spell out the routine and repeat sampling protocol that system must follow after it is reviewed and approved by the DEQ.

Major Differences

Major Differences

- **<u>Existing TCR</u>**
- Nonacute MCL for Total Coliform when >5% of monthly samples TC positive (but not E.coli). No assessment or corrective action required
- Acute violation based on E. coli and fecal coliform
- Public notice (PN) required for monthly TC and acute E. coli/fecal violations

- **<u>New RTCR</u>**
- Replaces nonacute TC MCL with a Treatment Technique requirement. An **Assessment** and corrective action required based on monitoring results
- Acute violation based on E. coli only
- PN required for failure to perform assessment within 30 days or correct contamination pathways and for all acute E. coli violations

[Speaker Notes For Slide: 27]

There are some differences in the revised rule that water system owners and operators will need to be aware of. Some of the major differences from the existing rule and the new rule are:

The existing TCR rule defined that a nonacute MCL violation occurred when more than 5% of the monthly samples were positive for total coliform, which also required issuance of public notice. The new rule removes the nonacute MCL for total coliform, but requires an Assessment to be completed where the pathway of contamination is investigated and if found, corrected.

The TCR rule stated that acute violations were based on the presence of either E. coli or fecal coliform, but the revised rule acute violation are only going to be based on E.coli.

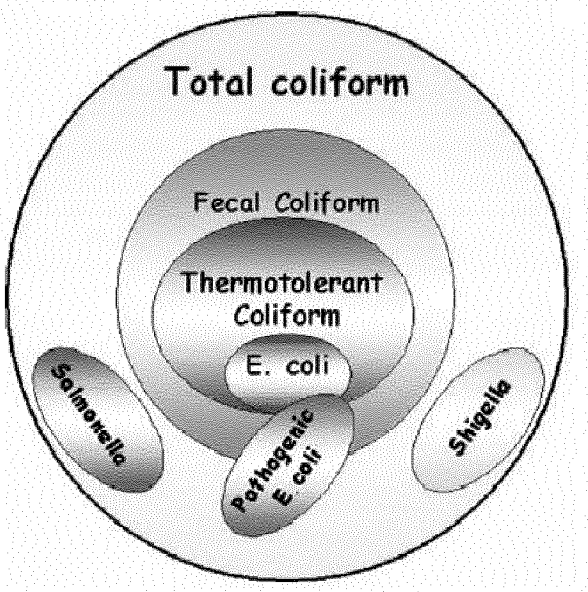
The existing rule requires Public Notice for both nonacute (total coliform) and acute (E.coli or fecal) violations. The new rule requires PN for failure to perform an assessment within 30 days or correct a contamination pathway, and for acute violations.

Why drop the Total Coliform MCL?

- "Many of the organisms detected by total coliform methods are not of fecal origin and **do not have any direct public health implication**."

- "Total coliforms in the distribution system **may indicate a potential pathway for contamination but by themselves do not indicate a health threat**."

- "The **absence** (versus the presence) **of total coliforms in the distribution system indicates a reduced likelihood** that fecal contamination and/or waterborne pathogens are occurring in the distribution system."



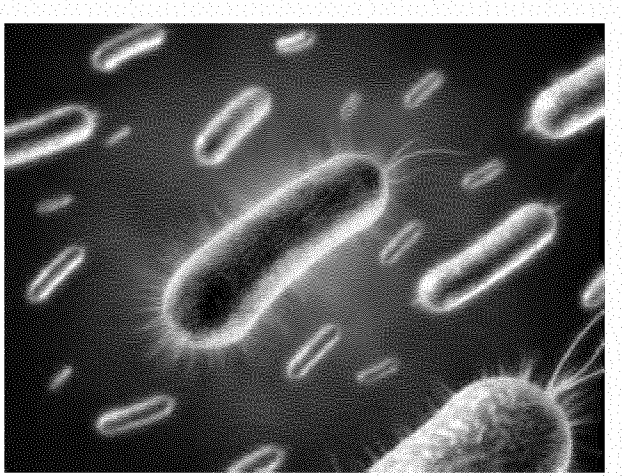
[Speaker Notes For Slide: 29]

As we already mentioned, EPA has removed the MCL for total coliform in the new rule. Many of the organisms detected by total coliform methods are not of fecal origin and do not have any direct public health implication.

Members of the Federal Advisory Committee that was in charge of revising the rule felt that public water systems should not be issuing public notice and making public health decisions based on an indicator organism like total coliform.

E. Coli MCL occurs when…

- A routine sample is TC-positive and one of its associated repeat samples is E. coli-positive.
- E. coli-positive and one of its associated repeat samples is TC-positive.
- A system fails to take all required repeat samples following a routine sample that is positive for E. coli.
- A system fails to test for E. coli when any repeat sample tests positive for TC.



[Speaker Notes For Slide: 31]

The committee ultimately decided to use E.coli as the organism for MCL violations. There are more than 700 recognized E. coli strains, which only a small number of which cause disease such as O157:H7. E. coli is a meaningful indicator for fecal contamination and the potential presence of associated pathogen occurrence.

The RTCR states that an E. coli MCL violation occurs when:

- A routine sample is TC-positive and one of its associated repeat samples is E. coli-positive.

- E. coli-positive and one of its associated repeat samples is TC-positive.

- A system fails to take all required repeat samples following a routine sample that is positive for E. coli.

- A system fails to test for E. coli when any repeat sample tests positive for TC.

(Mention that the last 2 are new items in the revised rule.)

Assessments

- Applies "find and fix" approach to possible contamination
- Systems must conduct a basic assessment (Level 1) or a more detailed assessment (Level 2) depending on the severity and frequency of contamination
- Failure to conduct assessment and correct is a Treatment Technique violation

[Speaker Notes For Slide: 33]

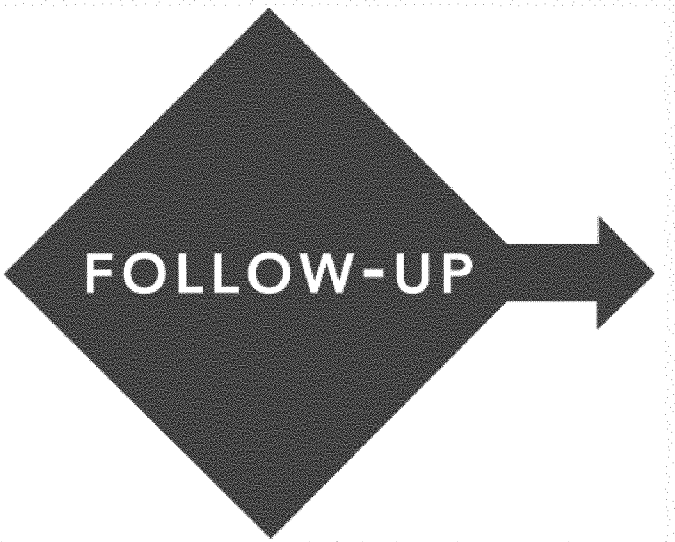
RTCR requires PWSs to investigate the system and correct any sanitary defects found when monitoring results show the system may be vulnerable to contamination. A Sanitary defect is a defect that could provide a pathway for entry for microbial contamination into the distribution system or that is indicative of a failure or imminent failure in a barrier that is already in place.

Systems must conduct a basic self assessment (Level 1) or a more detailed assessment by a qualified party (Level 2) depending on the severity and frequency of contamination.

Failure to assess and correct is a Treatment Technique violation.

Assessments - Level 1 Triggers

- When more than 5% of monthly samples are TC positive
- Failure to collect the correct # of repeat samples
- Can be completed by system owner/operator



[Speaker Notes For Slide: 35]

Level 1 Assessments must be done when:

PWSs taking 40 or more samples per month, the PWS exceeds 5.0 percent total coliform positive samples for the month.

2. For systems taking fewer than 40 samples per month, the PWS has two or more total coliform-positive samples in the same month.

3. The PWS fails to take every required repeat sample after any single routine totalcoliform-positive sample.

Level 1 Assessment can be completed by the system operators or owners.

Assessments – Level 2 Triggers

- When E.coli violation occurs
- Second Level 1 trigger within a 12 month period
- Must be done by party approved by state

[Speaker Notes For Slide: 37]

Level 2 Assessments must be done when:

- A system has an E. coli MCL violation.

- A system has a second Level 1 treatment technique trigger within a rolling 12-month period

Level 2 assessments must be dome by a party approved by the state. This could be the state, an approved 3rd party or the supply if staff or management has required certification or qualifications specified by the state.

Revisions to the Total Coliform Rule

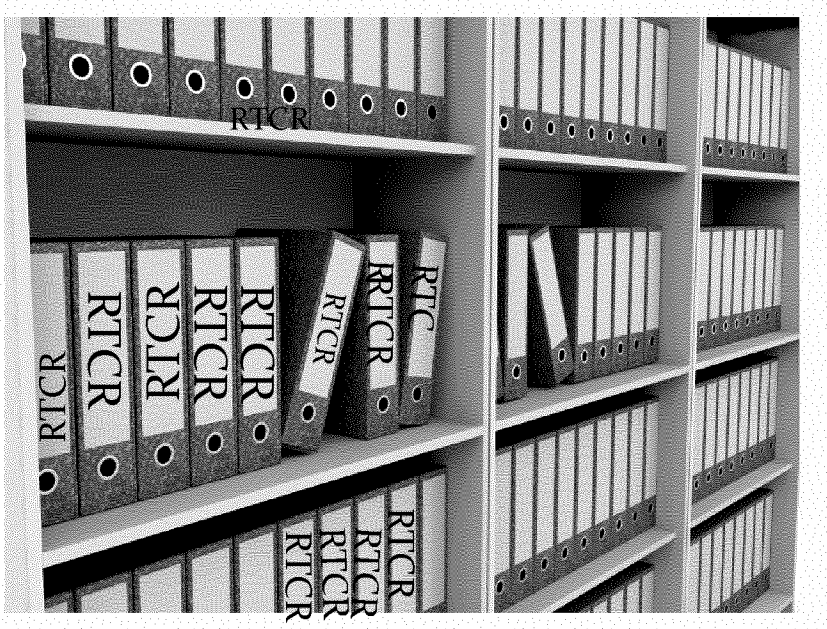
- Major Impact on Noncommunity Water Supplies
  - Major Workload Increase LHD
    - Tracking of Monitoring
    - Annual Site Visit or Increased Monitoring
  - Region 5 States Hardest Hit

RTCR - Summary

- 3 years until it takes effect on <u>April 1, 2016</u>

- DEQ taking steps to adopt RTCR into Act 399

- Guidance documents and Assessment forms will be prepared "soon"



[Speaker Notes For Slide: 40]

Remember that the RTCR does not take affect until the spring of 2016. In the meantime, the DEQ will be adopting the rule into Act 399 and will be preparing both guidance documents and assessment form templates to assist water supplies in preparing for, and complying with the revised rule.

Lead-Free Definition Under the Safe Drinking Water Act

- Current rules prohibit installation or repair of any:
  - Pipe
  - Fitting
  - Fixture
  - Solder
  - Flux

lead-free

- That is not "lead free"

[Speaker Notes For Slide: 42]

The next topic that I would like to discuss pertains to lead free plumbing.

Existing Safe Drinking Water Act rules state that no person may use any pipe, pipe or plumbing fitting or fixture, any solder, or any flux, in the installation or repair of any public water system; or any plumbing in a residential or nonresidential facility providing water for human consumption, that is not lead free.

There is also a rule that went into effect in 1998 the prohibits the introduction into commerce any pipe, or any pipe or plumbing fitting or fixture, that is not lead free, except for a pipe that is used in manufacturing or industrial processing;

Reduction of Lead in Drinking Water Act of 2011

- Changes the definition of "lead-free" by reducing lead content from 8% to a weighted average of not more than 0.25% in the wetted surface material

- Provides calculation procedure for determining the weighted average lead concentration of a product from the components that make up the product

- Effective on January 4, 2014

[Speaker Notes For Slide: 44]

The Reduction of Lead in Drinking Water Act of 2011 changed the definition of lead free. The new definition of "lead-free" reduced the allowable lead content from 8% to a weighted average of not more than 0.25% in the wetted surface material.

It also provides a formal calculation procedure for determining the weighted average lead concentration of a product from the components that make up the product

This rules takes effect January 4, 2014.

New Lead Free Rule

- A product introduced into commerce legally on January 3, 2014, can't be used in the installation or repair of a PWS or residential or non-residential facility on January 4, 2014
- Back inventory that does not meet 0.25% lead free calculation cannot be installed after January 3, 2014
- If repairs are done, does the entire fixture/device have to be replaced?

[Speaker Notes For Slide: 46]

As with any new rule, there are several concerns about implementation and many questions that arise as we get closer to the effective date of the rule.

The first concern is that in reality, a product can be legally sold the day before the effective date (January 3, 2014), but cannot be legally installed the next day (January 4, 2014) if it does not meet the new lead free definition.

One thing is clear, back inventory that does not meet 0.25% lead free calculation cannot be installed after January 3, 2014. For Public water supplies, this could include water meters and backflow preventers.

Another big question has to do with repairs. If a repair is done, it's clear the replacement parts must meet the new definition. But does the entire appurtenance have to be replaced? We (DEQ) are still waiting for guidance from EPA on this question.

What to do?

- Make sure any products meet NSF 61-G
  - 61-G complies with new free definition
- Use up any existing stock not meeting new definition by 1-3-13
  - May use for nonpotable purposes (i.e. irrigation)
- Still waiting for EPA guidance on repair/replacement issue
  - MDEQ not taking inventory of parts on hand

NSF®

Certified to NSF/ANSI 61-G

[Speaker Notes For Slide: 48]

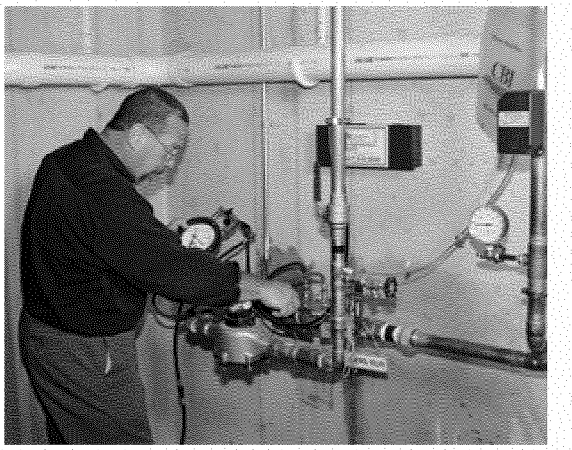
One thing water suppliers can do at this time is to make sure any appurtenance, fitting or fixture meets the new lead free definition, especially if it has brass or bronze components.

In Michigan all water system components that come into contact with drinking water must meet the NSF-61 Standard. The NSF 61-G designation indicates that the product not only complies with Standard 61, but also the new lead free definition. G represents an appendix in Standard 61 which is an additional test procedure that manufacturers can request during the certification process to make sure the unit meets the new lead free definition.

Changes to Backflow Testing Certification

- <u>Existing Approved Backflow Preventer Testers:</u>

- General Tester - licensed plumbers who have taken an approved backflow tester class
  - (can test any assembly in the state)
- Restricted Tester - nonlicensed plumbers who have taken an approved backflow tester class
  - (can test their own assemblies)



[Speaker Notes For Slide: 50]

Another thing that will be changing in the future is the Backflow Testing certification process.

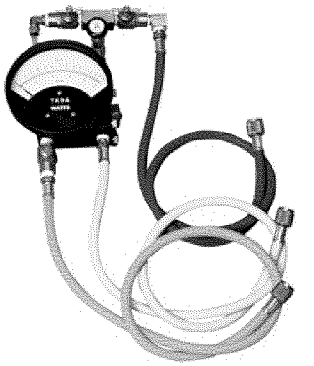
In Michigan there are two types of certified testers that have been allowed to test backflow preventers.

The first is a General Tester which are licensed plumbers who have taken and passed an approved backflow tester class. General testers can test any backflow preventer in the state.

Restricted Testers are nonlicensed plumbers who have taken and passed an approved backflow tester class, but they can only test backflow preventers in their normal place of employment.

Backflow Preventer Testing Certification Concerns

- DEQ, State Plumbing Board, and other 3rd party organizations agreed that qualifications to become an "approved" or "certified" tester needed to be updated and more consistent:
  - Some type of re-certification
  - Consistent class structure
  - Standardized exams



- Decided to move towards ASSE testing certification

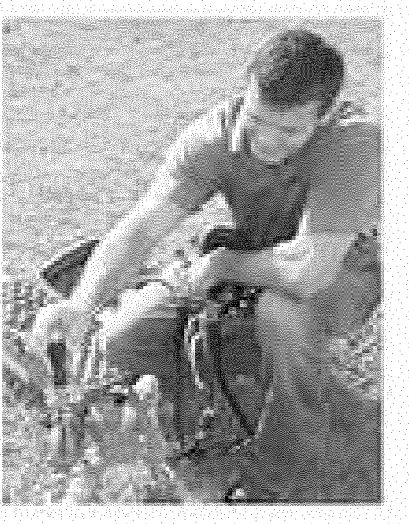
[Speaker Notes For Slide: 52]

In Michigan, there have been several organizations that held backflow testing classes around the state. However, these classes varied in the amount of class time, the class content, the format of the test and none of them required a re-certification or continuing education to remain a certified tester.

After much discussion, the DEQ along with the State Plumbing Board decided to move towards a standardized testing backflow certification, which is the American Society of Sanitary Engineers (ASSE).

Transitioning to ASSE Certification

- Makes all the approved testing classes t
  - Class time
  - Class format and agenda
  - Instructors
  - Uniform exam and exam procedures



- Regardless of where a class is held or who is holding it, every participant will get the same course content

[Speaker Notes For Slide: 54]

The ASSE Testing Certification allows for a standardize class time and format. All ASSE approved testing classes, regardless of where they are held, offer the following benefits.

40 hours of class time
Class format and content
Instructors are ASSE certified
The exam and exam formats are the same for every class.

ASSE Certification

- Certification expires every 3 years, must take refresher class and pass the test to remain certified

- Does not require plumbing license
  - Must have 5 years in "related field" to attend the class

[Speaker Notes For Slide: 56]

The ASSE certification is good for 3 years, and to maintain the certification a person will have to take, and pass a one day refresher class.

One major change is that the ASSE testing certification does not require a person to be a licensed plumber. However to be able to even take an ASSE testing class, the person must have five years of experience in a related field.

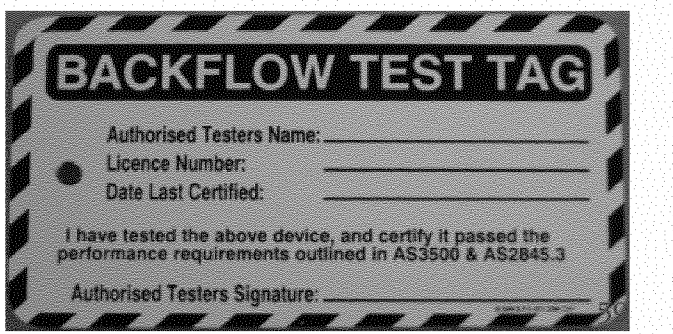
Many of the testing classes in Michigan now ASSE certified. The DEQ recommends that any person taking a tester class in the future to make sure it is ASSE certified.

What Does This All Mean?

- For now, nothing!

- Use existing testers (general or restricted) and encourage all testers to become ASSE certified
  - Most testers approved under a existing program will only have to take the refresher course to become ASSE certified

- Once enough testers become ASSE certified statewide, it will become "official" (2015?)



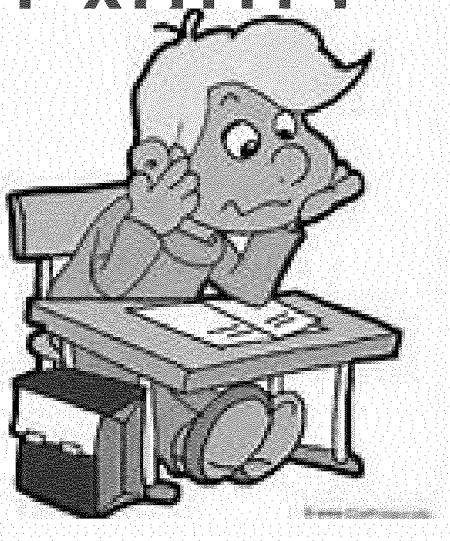
[Speaker Notes For Slide: 58]

So what does this mean? For now, nothing!

Use existing testers (general or restricted) and encourage all testers to become ASSE certified
Most testers approved under a existing program will only have to take a 1-2 day refresher course to become ASSE certified

Once enough testers become ASSE certified statewide, it will become “official”, which it looks like will happen sometime around 2015.

5 Level Certification Exams

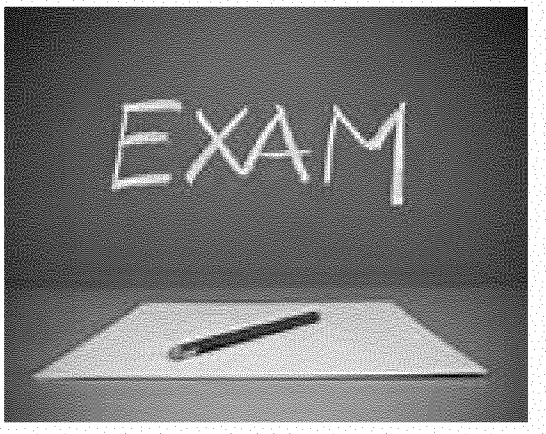


- 5 level exams will now be offered at same time and locations as other drinking water exams

- Next exam dates:

  May 2, 2013

  November 6, 2013
(postmark by Sept 16th)



- Applications mailed to DEQ must be originals, no photocopies!

[Speaker Notes For Slide: 60]

The S-5, D-5 and F-5 drinking water exams are now being offered at the same time and in the same locations as the Community exams.

The Next exam date is May 2, 2013 followed by November 6, 2013. The postmark deadline for the November exam is September 16, 2013.

If you submit your drinking water exam application to your accounting department for payment, please be sure they know that we need the original sent to us...not a copy. We have received many applications in our office this spring that are copies and we need the original application with your original signature. We are making calls to those we find that need original signatures so they can be submitted and our records are complete.

Stage 2 Disinfection Byproducts (DBP) Rule

- Stage 2 compliance monitoring for TTHM/HAA5 samples replaces the existing Stage 1 monitoring
  - Started in 2012 for supplies serving populations greater than 50,000 and any customers they may serve
  - Starts October 1, 2013 for supplies serving populations less than 10,000 and any customers they may serve
- Stage 1 monitoring continues until Stage 2 begins

[Speaker Notes For Slide: 62]

Stage 2 compliance monitoring is set to begin for small and medium sized systems in 2013. This monitoring includes disinfection byproduct monitoring of Total Trihalomethane compounds and Halo Acetic Acids for all communities that serve chlorinated water.

For community water systems with populations greater than 50,000, Stage 2 monitoring began in 2012. These systems include Detroit, Grand Rapids, Kalamazoo, Lansing, Ann Arbor, Saginaw/Midland Corporation, Wyoming, Waterford Township and their customer supplies.

Systems serving population less than 50,000 transition to Stage 2 sampling later this year, on October 1, 2013.

Please note that Stage 1 monitoring continues until Stage 2 monitoring begins.

Stage 2 DBP Compliance Monitoring differences from Stage 1

- Each site must meet the MCL for TTHM and HAA5 called Locational Running Annual Average (LRAA).
- Wholesale supplies and customer supplies will collect compliance samples separately based on the population of each community.
- Some small systems will not be required to collect "dual set" samples for TTHM and HAA5.
- DEQ will assist systems in developing sampling site plans for DBP's and will notify systems of their Stage 2 DBP requirements

[Speaker Notes For Slide: 64]

Stage 2 is different from Stage 1 in a number of ways. First of all, each site where samples are collected must now meet the MCL of 80 micrograms/liter for TTHM and 60 micrograms/liter for HAA5. No more system wide averaging. This is called the locational running annual average.

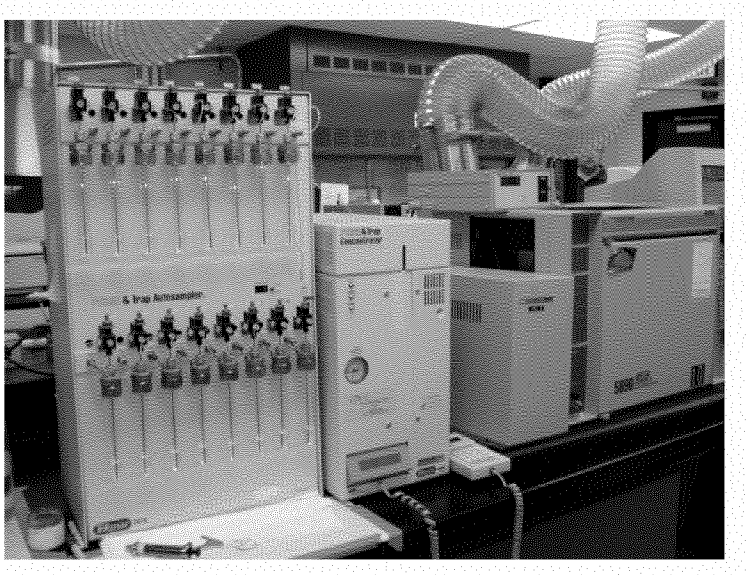
In addition, similar to lead and copper and bacti monitoring, each system that purchases water will be responsible for the TTHM and HAA5 samples within their community.

However, some small systems such as surface water supplies on quarterly monitoring serving fewer than 3,300 and groundwater systems on annual monitoring serving fewer than 500 may not have to collect sample pairs at each location (this called a dual set), reducing the sampling costs for those systems.

DEQ will assist systems in developing sampling site plans for DBP's and will notify systems of their Stage 2 DBP sampling requirements.

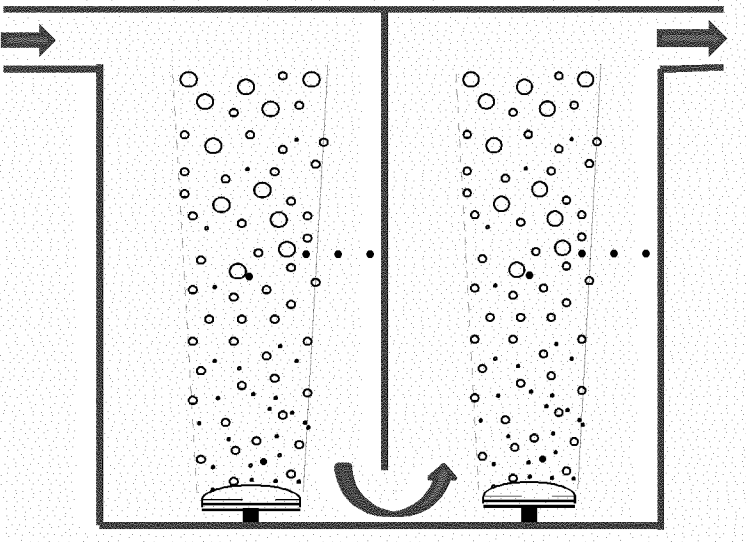
Stage 2 DBPR - Some New Surprises

- Some Regional Systems using Great Lakes
  - Busting on LRAA
  - No problems with Stage 1 DBPR
- 1st Glance
  - Long Detention Times
  - Prechlorination



Stage 2 DBPR - Some New Surprises

- Proposed Solutions
  - Alternative Disinfection Practices
  - Alternative Disinfectants
  - Aeration
    - Plant Based
    - Distribution Based



Upcoming New or Revised EPA Rules

Regulatory Action	**Proposed**	**Final**
Consumer Confidence Rule (CCR) Alternative Delivery Memo	2012	January 2013
Revised Total Coliform Rule (RTCR)	July 2010	2013
3rd Unregulated Contaminant Monitoring Rule (UCMR 3)	April 2012	2013-2015
Perchlorate	February 2013	August 2014
Long-Term Lead Copper Rule (LT-LCR)	2013	2015
Carcinogenic VOCs (cVOCs)	2013	2015
Hexavalent Chromium (Cr-6)	2016-2017	2019-2020

The End

Subject: Meeting with Director

Sonya,

I apologize that I am now getting you information regarding our meeting with Director Wyant on Monday with my client, the Genesee County Drain Commissioner Jeff Wright. The purpose of our meeting will be to discuss projects on the Drinking Water Revolving Fund for both Genesee County but also Karegnondi Water Authority.
Part of the discussion will be the hope of having The MDEQ endorsing the project and approving DWRF and other funding, because the project will, at long last, provide a water supply that will truly be reliable. One of the greatest problems for this area is that when the water supply from Detroit is interrupted, this area will experience water restrictions, boil water notices and the complete shutdown of our restaurants, hospitals and many area businesses.
My primary contact for information has been unavailable for the last two weeks, and I apologize for any inconvenience. If I am able to obtain any other information I will be happy to share it with you. I have attached a PowerPoint with general talking points as well as an Executive Summary from an Engineering Report which further discusses the project in comparison to the current system this region has for water.
Thank you for your patience.

Kindsvatter & Associates, Inc. is a strategic initiative government relations and association management specialist firm with a seasoned professional staff whose primary goal is providing clients with business management services and legislative representation at the state and national level.

Talking points on KWA

Decision basis

- Reliability

  Must have reliable, uninterrupted supply of wholesome water.
  Multiple interruptions due to failures of power supply, pump stations and water main breaks on Detroit system – have resulted in Boil Water Notices that close hospitals, schools, and businesses.

- Creation of Jobs

  This project will employ engineers, surveyors, equipment operators, carpenters, masons, iron workers, millwrights, electricians, concrete suppliers, laborers and a variety of other trades for several years. Will emphasize employment of local workers.
  With employment of the local workforce there will be a positive impact for area businesses prepared to meet the needs of these tradespersons and professionals.

- Empowerment of the Region

  Local, elected officials will take responsibility for the production, delivery and the cost of water to all the businesses and residents that choose a public water supply. Ultimately, the people will have a voice in water supply matters.

- Ownership

  The present water supply is not reliable. State officials are on record they are requiring redundancy and reliability. Detroit has already put into works a plan for a second pipeline to the region. The water customers here must pay for that new system. Obviously a second pipeline will be built at a cost of hundreds of millions of dollars. We will pay for it whether it is built by KWA or Detroit. The difference is under KWA, we will build it with local labor, control it and OWN it.

Study Participants

This study of a new water supply has been developed for the following governmental units and agencies.

City of Flint

Genesee County

Genesee County Drain Commissioner – Division of Water and Waste Services
- City of Burton
- Clayton Township
- City of Clio
- Davison Township
- Flint Township
- City of Flushing
- Flushing Township
- Gaines Township
- Genesee Township
- Grand Blanc Township
- City of Montrose
- Montrose Township
- City of Mt. Morris
- Mt. Morris Township
- Mundy Township
- Richfield Township
- City of Swartz Creek
- Thetford Township
- Vienna Township

Lapeer County

Greater Lapeer County Utilities Authority
- Village of Almont
- City of Imlay City
- City of Lapeer
- Mayfield Township
- Almont Township*
- Elba Township*
- Goodland Township*
- Imlay Township*
- Lapeer Township*
- Oregon Township*

**Do not currently provide water supply*

Sanilac County

- Worth Township
- Fremont Township
- Maple Valley Township
- Speaker Township

This report has been developed for planning purposes and considers data available through May 2009.

Executive Summary

1 Introduction

The City of Flint (Flint), the Genesee County Drain Commissioner – Division of Water and Waste Services (GCDC-WWS), and the Greater Lapeer County Utilities Authority (GLCUA) are supplied water from the City of Detroit's Water and Sewerage Department (DWSD). Because of growing concerns regarding the reliability and cost of the DWSD supply, Flint, GCDC-WWS, and GLCUA have considered alternatives for water supply. The first formal study was completed in 1992; the most recent was completed in 2006.

This study considers two alternatives from the 2006 study. One alternative is the continued purchase of water from DWSD; the other alternative is the development of a new water supply from Lake Huron.

Both alternatives include the construction of a new pipeline. DWSD is planning the construction of a new pipeline to Flint to address concerns regarding reliability and capacity. Water rates for either alternative will be increased similarly to recover the capital investment in new facilities.

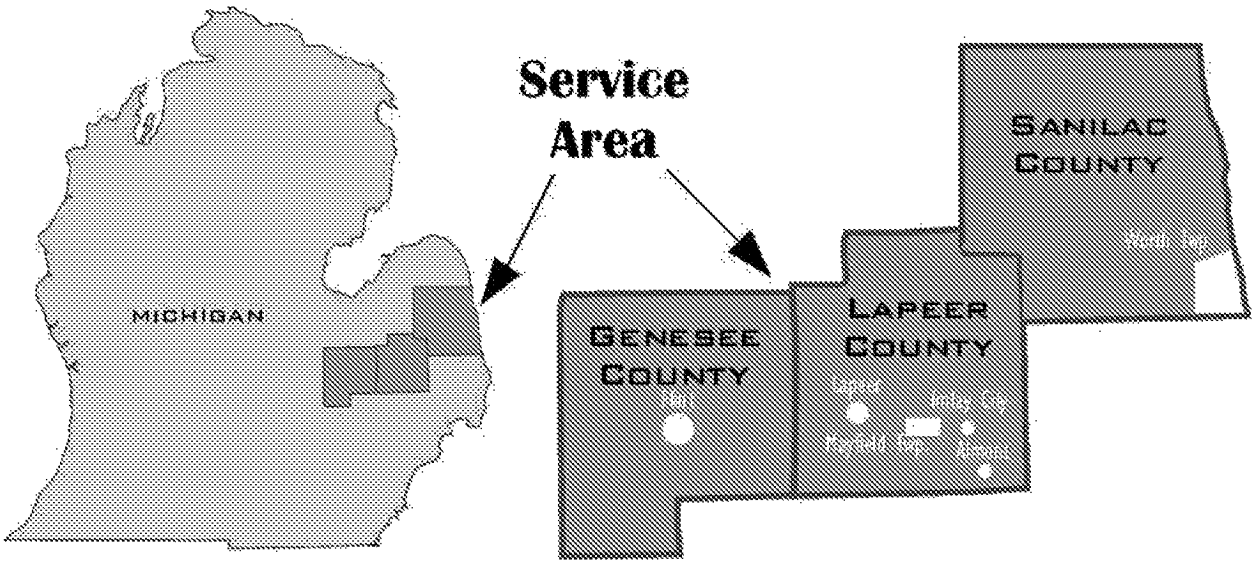
The second alternative, development of a new water supply from Lake Huron, provides the opportunity to supply water to additional communities. Sanilac County has joined Flint, GCDC-WWS, and GLCUA as participants in this study of water supply alternatives.

A new governmental authority, the Karegnondi Water Authority (KWA), is planned to develop and operate the new water supply. The KWA will be comprised of the communities supplied water.

2 Study Area

Figure 1 shows the study area.

Figure 1: Study Area



3 Demands

Table 1 shows the current and future (25 year) demands used for this study. Existing demands are based on records of recent water use; future demands have been developed from information provided by each community.

Table 1: Demands for Planning

	Initial (2014)		25 Year (2039)	
	Avg Day (mgd)	Max Day (mgd)	Avg Day (mgd)	Max Day (mgd)
Genesee County	14.2	25.0	16.2	32.5
City of Flint	16.5	25.0	19.2	28.8
Lapeer County	2.5	3.8	9.0	14.8
Sanilac County	0.1	0.1	0.1	0.1
Total	33.3	53.9	44.5	76.2

4 Alternative 1- Continued Supply by DWSD

Several options for continued DWSD supply to Flint, GCDC-WWS, and GLCUA have been discussed with DWSD representatives; however, there have been no formal negotiations or agreement regarding any particular option. Four options have been evaluated based on these discussions. Analysis indicates that the lowest cost option for continued supply from DWSD is a partnering arrangement with DWSD. This alternative is not available to Sanilac County.

With this option, a 30 year contract with DWSD for water service is required. Flint, GCDC-WWS, and GLCUA will be responsible to construct and operate a portion of the Flint Transmission System (FTS) which DWSD is planning to construct in 2010. By constructing and operating a portion of the FTS; water can be purchased by Flint, GCDC-WWS, and GLCUA at a lower rate.

DWSD estimates the portion of the FTS to be constructed by Flint, GCDC-WWS, and GLCUA at $346,000,000. Operating costs are projected to be $724,000 per year initially. In exchange for responsibility for the construction and operating costs; Flint, GCDC-WWS, and GLCUA will benefit by a 45% reduction in the purchase price of water from DWSD. Table 2 shows the cost of water for this option in 2011-2012, the year in which construction of the FTS is planned to be completed. The current water rate (2009-2010) is shown for comparison.

Table 2: Comparison of DWSD Cost of Water, Now and After Construction of FTS

	Flint & GCDC-WWS ($/MCF)	GLCUA ($/MCF)
DWSD Commodity	$8.70	$9.30
FTS Capital	$15.19	$14.53
Macomb Capital *	$0.00	$0.00
FTS O&M	$0.46	$0.46
Projected 2011-2012 Rate	$24.35	$24.29
2009-2010 Rate	$14.32	$16.11

*Planned for 2024; no cost impact until then

5 Alternative 2 – New Lake Huron Water Supply

The 2006 study evaluated several options for a new water supply. The 2009 update focuses on one of the options, the alternative of delivering raw water from Lake Huron to participating communities for local treatment and distribution.

GCDC-WWS purchased 230 acres of property adjacent to Lake Huron in southern Sanilac County in 2002. An intake to draw water from Lake Huron and a pumping station are planned for this site. Raw water will be pumped through a pipeline to an inland reservoir.

Inland from the reservoir, pipelines supply treatment facilities for Flint, GCDC-WWS, and GLCUA. Treatment facilities for Sanilac County can be located along the pipeline route.

Treatment by microfiltration has been planned for Sanilac County and GLCUA. A new conventional treatment plant is planned for GCDC-WWS. It is planned that raw Lake Huron water is delivered for treatment to Flint's existing treatment plant.

The planned water system provides for twin pipelines, storage, backup equipment and processes to provide a reliable supply. Facilities have been planned with capacity for the 25 year demands shown in Table 1, and provisions for further expansion.

Figure 2 is a schematic showing the new water supply.

Figure 2: Schematic Lake Huron Water Supply

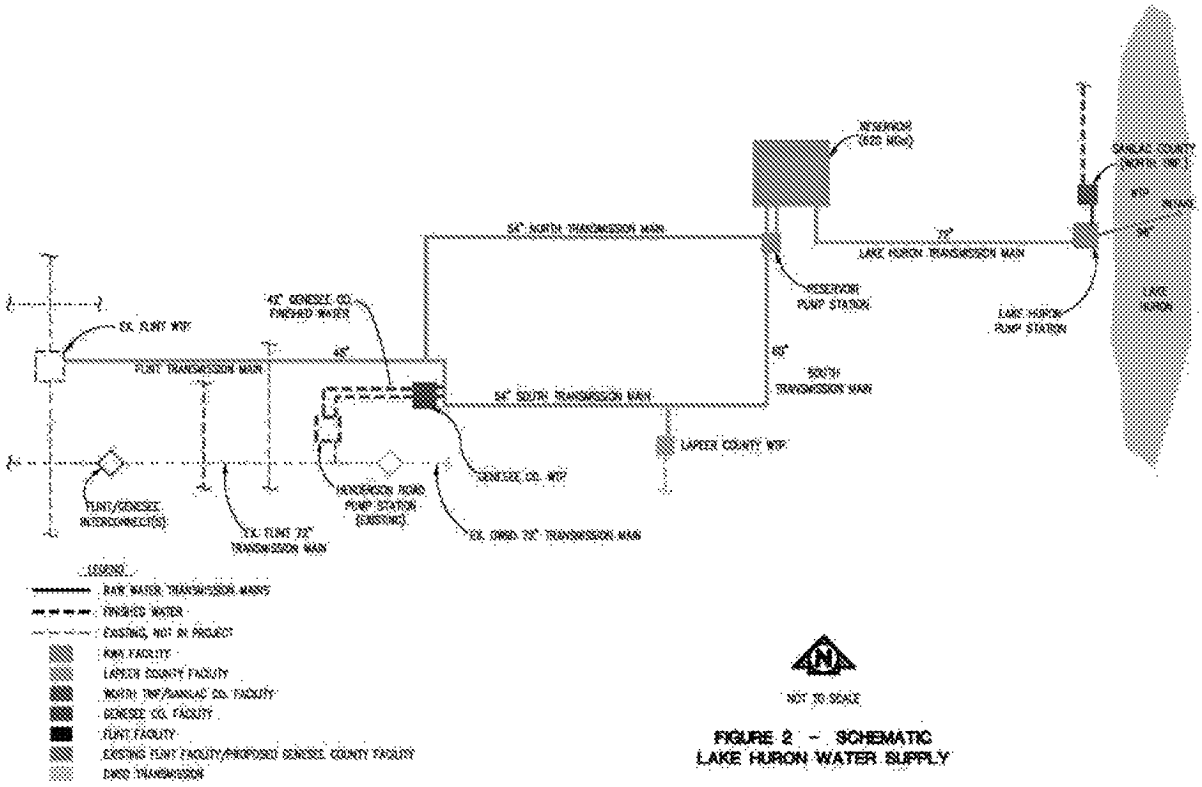


Table 3 summarizes the project cost of the new Lake Huron water supply which was studied.

Table 3: Summary of Cost of New Lake Huron Water Supply

Project Component	Total Project Cost	Sanilac Co. Share	Lapeer Co. Share	GCDC-WWS Share	Flint Share
KWA Lake Huron Water Supply	$443,885,767	$813,723	$86,312,736	$188,899,927	$167,859,381
New Sanilac Co. Facilities	$1,849,360	$1,849,360			
New Lapeer Co. Facilities	$40,009,060		$40,009,060		
New Genesee Co. Facilities / Upgrades	$110,038,554			$110,038,554	
New Flint Upgrades	$5,987,030				$5,987,030
Totals	$601,769,771	$2,663,083	$126,321,796	$298,938,481	$173,846,411

Table 4 shows the projected operating costs for the new Lake Huron water supply during the initial year of operation.

Table 4: Project Operating Expenses during Initial Year of New Lake Huron Water Supply

Community	KWA ($/MCF)	Local ($/MCF)	New Water Supply Treatment Cost (2014)	2009-2010 DWSD Rate
Sanilac County	$1.30	$41.56	$42.86	N.A.
Lapeer County (GLCUA)	$1.30	$3.11	$4.41	$16.10
GCDC-WWS	$1.30	$2.86	$4.16	$14.32
City of Flint	$1.30	$4.13	$5.43	$14.32

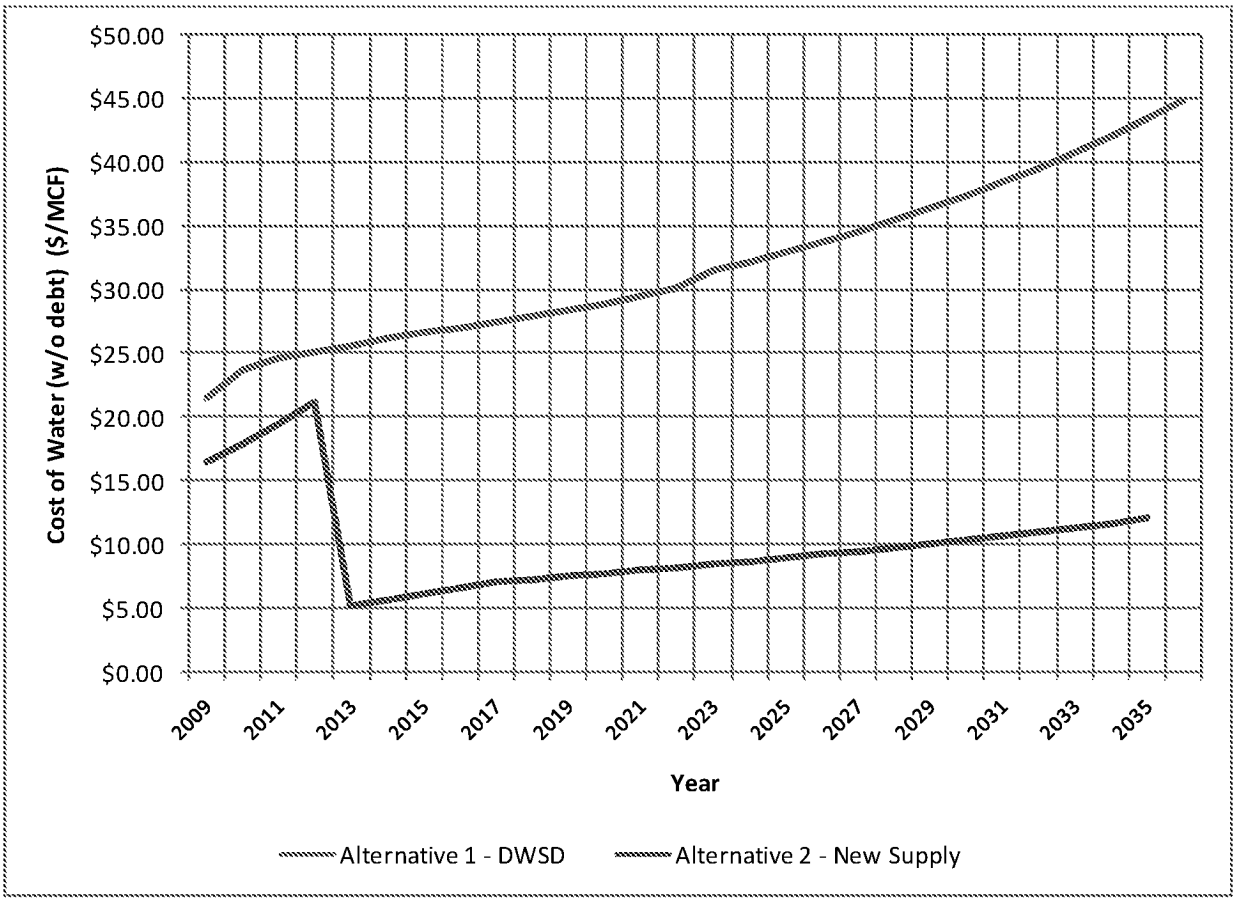
Notes
1. New water supply costs based on projected annual consumption of each community in year 2014.
2. Costs do not include debt retirement or depreciation expense.

6 Comparison of Alternatives

With the investments in facilities planned by DWSD, either of the alternatives considered are believed to provide a reliable, long-term water supply with sufficient capacity for the needs of the study area. Regardless of the alternative selected, a new pipeline and other facilities are planned for construction. As a result, the cost of water will increase with either alternative.

Figure 3 shows the projected cost of water for each alternative. For demonstration purposes, the cost of water for the new Lake Huron water supply alternative does not include the cost of repayment of debt incurred for its construction. The graph shows that without the debt of constructing the new system (or once the debt for its construction is repaid), the cost of water from the new supply will be substantially less than continuing to purchase water from DWSD.

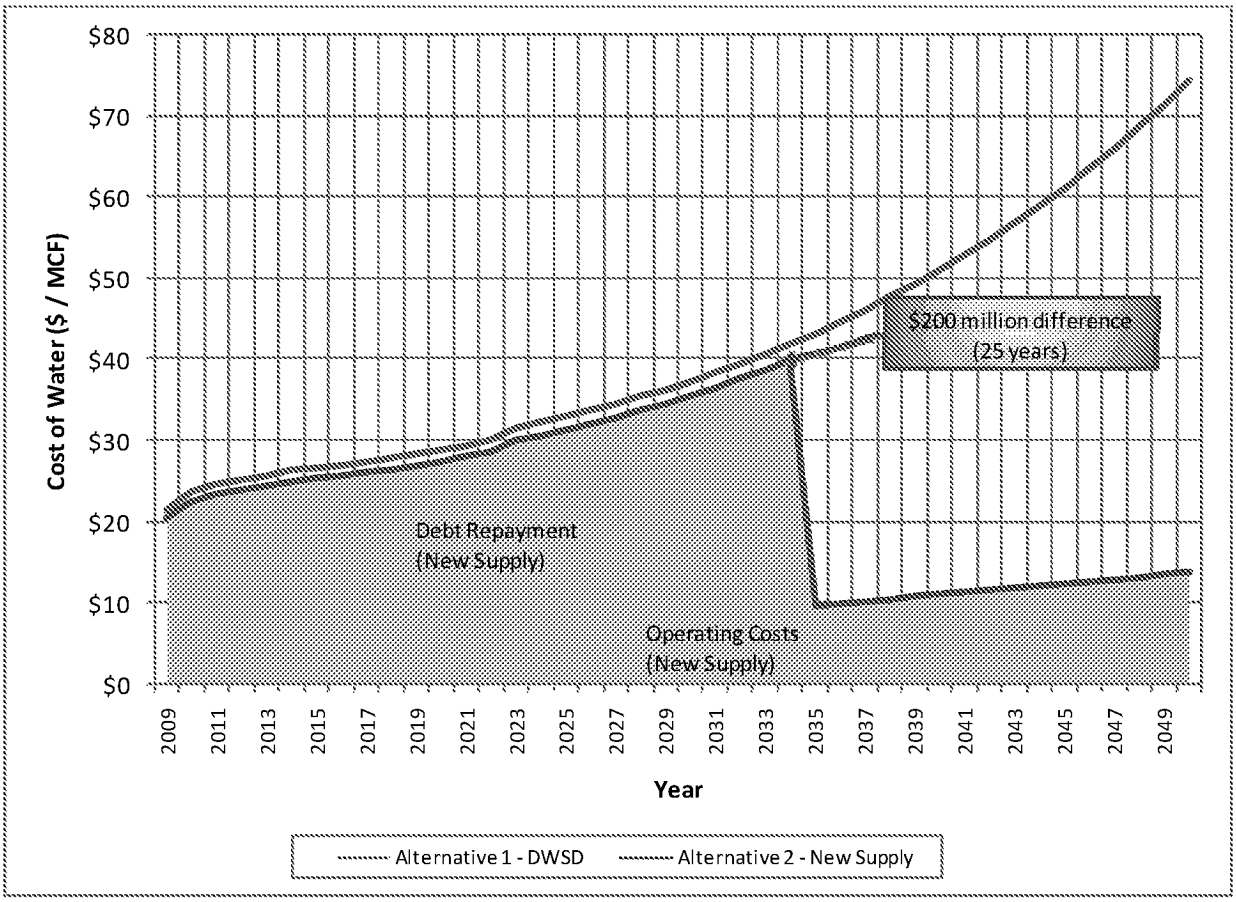
Figure 3: Projected Cost of Water



The cost of water for the DWSD alternative was developed using the DWSD rate methodology for recovery of capital investment. For comparison, the cost of water for the new Lake Huron supply should include the cost of financing its construction.

If 25-year bonds are used for financing the construction of the new Lake Huron supply, analysis has shown that the cost of water for the new Lake Huron supply can be less than with continuing service from DWSD. Over the 25-year life of the bonds, the total cost of water with continued DWSD supply is projected to be $200 million greater than with the new Lake Huron supply. Figure 4 demonstrates the cost savings resulting from new Lake Huron supply during the 25-year bond period

Figure 4: Comparison of Alternatives



Preliminary Engineering Report

Lake Huron Water Supply
Karegnondi Water Authority

September 2009

Preliminary Report

1 Introduction

The City of Flint (Flint), the Genesee County Drain Commissioner Division of Water and Waste Services (GCDC-WWS), and the Greater Lapeer County Utility Authority (GLCUA) operate community water systems. The Detroit Water and Sewerage Department (DWSD) has supplied these utilities with water since the 1960s.

Because of growing concerns regarding the reliability and cost of the DWSD supply, these utilities have studied other supply alternatives. The first formal study was completed in 1992; a 2006 study evaluated several alternatives for a long-term water supply.

This study focuses on two of the alternatives considered in the 2006 study. One alternative considers the impact of remaining customers of DWSD; the second alternative evaluates the feasibility of developing a new Lake Huron water supply.

DWSD is planning significant capital investments to address concerns with reliability and to provide sufficient capacity to meet the needs of their customers. The cost of planned facility improvements will be added to future rate increases to all customers. If DWSD continues to supply Flint, GCDC-WWS, and GLCUA; it is expected that their future rate increases will be greater than other DWSD customers because of the methodology for used for determining the cost of water. This study compares different options for remaining a customer of DWSD and uses DWSD's established rate structure to project the future cost of water.

The alternative studied for a new Lake Huron water supply can provide water supply on a regional basis, providing the potential for service to additional communities. As a result of this potential; Sanilac County is included as a participant in this study along with Flint, GCDC-WWS, and Lapeer County. This study develops the conceptual design of a new water supply to allow for estimates of the costs for its construction and operation for comparison with the alternative of continuing supply by DWSD.

A new governmental authority, the Karegnondi Water Authority (KWA), is planned to be established to develop and operate the new water supply. The KWA will include the communities supplied by the new water supply.

2 Scope

The alternatives for long term water supply are evaluated on the following criteria:

- Reliability – A new supply shall be planned with redundancy and backup provisions to maintain a continuous, safe supply of drinking water to customers.
- Cost – The concept studied shall be planned in sufficient detail to reasonably develop opinions of construction and operating costs, to allow for its comparison with existing water supplies.
- Quality – A new supply shall be planned with suitable provisions so drinking water will meet all current and anticipated regulations, and will consistently be of equal or better quality than current supplies.
- Quantity – The water supply shall be designed with sufficient capacity and provisions for expansion to meet the needs of the service area throughout the planning period.

- Security – Planned facilities shall have suitable provisions and measures to guard against disruption of service or contamination resulting from vandalism or malevolent activities.

The alternative of continuing supply from DWSD is developed using their current rate methodology and planned improvements to their facilities. This report provides an overview of the options for continued service by DWSD; Appendix 18 provides a detailed analysis.

The alternative of developing a new water supply for Flint, Genesee County, Lapeer County, and Sanilac County assumes that the KWA will develop and operate the new water supply, to deliver raw water from Lake Huron to each member community. Member communities will be responsible for local treatment and distribution of water to their customers.

The concept for a new water supply is developed through a series of technical memoranda that serve the following purposes.

a. Determine the facilities, processes, and capacities required to supply the proposed service area.
b. Establish budgets for construction and ongoing operating and maintenance (O&M)
c. Evaluate constructability (permitting, environmental concerns, right-of-way requirements).
d. Develop schedules for implementation.

This report provides an overview of the study undertaken to develop a new Lake Huron water supply. Details are provided in the technical memoranda as appendices to this report.

3 Planning Criteria

3.1 Criteria for Continued DWSD Supply Options

The following criteria were used to evaluate the alternative of remaining a customer of DWSD.

- Planning Period: 25 years
- Economics: Financing for DWSD capital improvements: 30-year bonds at 5% rate

3.2 Criteria for New Lake Huron Supply Option

Engineers and planners used the following criteria for the study and evaluation of a new Lake Huron water supply.

- Planning Period: Proposed facilities are planned to meet the projected 25-year needs, at a minimum, with provisions for future expansion.

- Design Capacity: Proposed water supply is planned with capacity adequate for maximum day demand (MDD); peak demands are assumed to be met through local storage.

- Economics:
  Based on the following assumptions:
  - Inflation Rate during Planning Period: 3% annually
  - Financing: 25-year bonds at 6% rate
  - Capitalized Interest: not included

- Engineer's Opinion of Construction Costs:
  - ENR Construction Cost Index: 8688
  - Construction Contingencies: 15% of construction cost

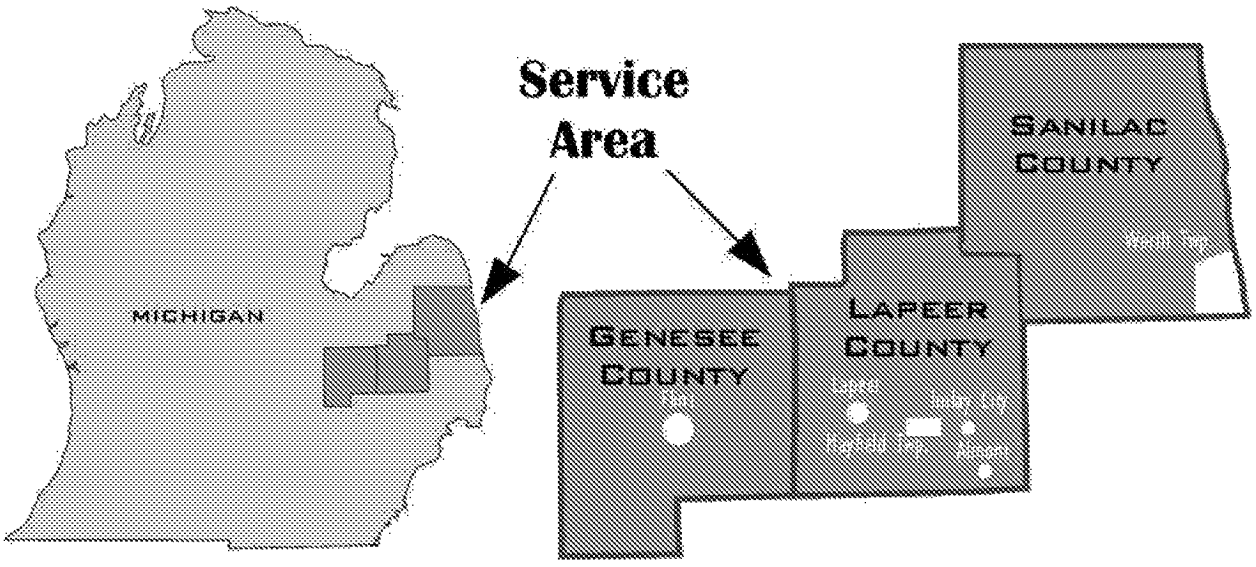
- Design Contingencies: 5% of construction cost
- Engineering, Legal, Bonds, and Administration: 17% of construction cost
- Land Acquisition Costs:
  - Easements: $0.15 per square foot
  - Land (Purchase): $6,000 per acre

- Operating and Maintenance Costs
  - Depreciation:
    - Equal to installed cost of equipment and facilities divided by their expected service life. Depreciation expenses are considered constant throughout the study period. Services lives are assumed as follows:
      - Pipe: 75 years
      - Mechanical Equipment: 20 years
      - Physical Plant: 75 years
  - Power: assumed $0.063 per kWh, in 2014 dollars
  - Labor
    - The following hourly rates are assumed, in 2014 dollars:
      - WTP Superintendent: $35 per hour
      - Supervisor: $30 per hour
      - Operators: $20 per hour
      - Maintenance Mechanics: $25 per hour
      - Mechanic's Helpers: $20 per hour
      - Instrument Technicians: $25 per hour
    - Fringe benefits add 62% to the preceding labor rates

4 Study Area

The study area is considered to include Genesee County, Flint, Lapeer County, and Sanilac County. Figure 4-1 below illustrates the study area.

Figure 4-1: Study Area



The City of Flint provides water to residential, business, and institutional customers throughout the city. The city is fully developed and adjacent areas are supplied water by GCDC-WWS, resulting in little potential for expansion of its service area.

GCDC-WWS provides water to nineteen villages, cities, and townships located in Genesee County. There is potential for expanded water service within the nineteen communities now served plus growth potential by serving new communities, within or adjacent to Genesee County.

Most cities and villages in Lapeer County operate community water systems. The City of Lapeer, the City of Imlay City, the Village of Almont, and Mayfield Township are members of GLCUA and purchase water from DWSD for distribution to their water customers. Lapeer, Imlay City, and Almont supply water to businesses and residences throughout their municipal boundaries. Mayfield Township provides water service only to a limited area within the township. Six other townships are members of GLCUA; however, they do not currently provide water service to their communities. Other county municipalities, including Columbiaville, Dryden, Metamora, and North Branch operate community water systems which utilize wells for supply. For this study, the initial service area for the new Lake Huron Supply is assumed to be the GLCUA communities. There is potential for increased water demands through continued development within existing GLCUA service areas, expansion of service to new areas, and agricultural irrigation.

Sanilac County is predominantly rural, with 80% of the land used agriculturally. Most villages and cities in the county operate community water systems. Four of the five townships which border Lake Huron operate community water systems which supply only the properties near the lakeshore. The proposed supply pipeline from Lake Huron provides the ability to serve to other areas of the county. For this study, it is assumed that one township (Worth Township) receives water from the new Lake Huron supply. Studying the requirements for providing service to Worth Township provides guidance regarding the costs for supplying other Sanilac County communities.

5 Demands

Communities and agencies within the study area are presently supplied water from other sources. Engineers and planners have reviewed records of past water use to determine the initial demands of the proposed water supply. In addition, officials representing communities within the service area have provided guidance for projecting future water use. Table 5-1 below summarizes the demands used for this study.

Table 5-1 Design Demands Used for Study

	Initial (2014)		25 Year (2039)		50 Year (2064)	
	Avg Day (mgd)	Max Day (mgd)	Avg Day (mgd)	Max Day (mgd)	Avg Day (mgd)	Max Day (mgd)
GCDC-WWS	14.2	25.0	16.2	32.5	22.5	45.0
Flint	16.5	25.0	19.2	28.8	24.0	36.0
GLCUA	2.5	3.8	9.0	14.8	11.7	19.7
Sanilac County	0.1	0.1	0.1	0.1	0.1	0.2
Total	33.3	53.9	44.5	76.2	58.3	100.9

6 Alternative 1 - Continued Supply from DWSD

Flint, GCDC-WWS, and GLCUA are currently supplied water from DWSD. Flint and GLCUA have contracts with DWSD for water service. GCDC-WWS is supplied water from Flint as a second-tier customer. This section considers options for continued supply by DWSD.

Sanilac County is not currently supplied by DWSD. This alternative is not available for Sanilac County.

6.1 DWSD Rate Methodology

DWSD establishes water rates for all of its customers through a uniform rate structure. The following variables are considered in the rate model:

- Annual average day flow
- Maximum day flow
- Peak hour flow
- Distance
- Elevation
- Meter size
- And combinations of the above

DWSD determines its cost to operate, maintain, and expand the water system on an annual basis. Costs are categorized regarding their impact by the preceding variables. Costs are combined with the variables established for each community and are used to compute the cost of water for each community annually.

DWSD indicates that rate increases are expected to average 7% through 2014, then 4% thereafter. These increases are considered the average of all DWSD customers. A review of historical records indicates that rate increases to Flint have averaged about 1% higher than the average of all suburban DWSD customers. Therefore, this study assumes increases of 8% through 2014 and 5% subsequently.

The geographical locations of Flint, GCDC-WWS, and GLCUA have a significant impact on their rates for water supply by DWSD. Historically, about 70% of the cost of water has been attributed to the "distance" and "elevation" components of the DWSD rate methodology.

DWSD is planning the construction of additional transmission facilities. Using the current rate methodology, the costs associated with the construction and operation of these facilities will be assigned to the "distance" and "elevation" categories. The cost of water to Flint, GCDC-WWS, and GLCUA are expected to increase more as DWSD adds these facilities.

6.2 Options for Continued DWSD Supply

DWSD has developed a new "Master Agreement for Water Supply". The new agreement provides a thirty year commitment for water supply and requires a commitment for purchase of a minimum volume of water each year. The agreement also provides customers the ability to specify the quantities and pressures of water to be supplied. The cost of water will be based upon the contracted quantities rather than historical demands. DWSD is not required to deliver water in

excess of the contracted quantity. Where demands are exceeded by a community, DWSD may increase the cost of water to the community based on the actual demands experienced.

DWSD is encouraging all suburban customers to adopt the new agreement to provide for better planning, uniformity between all customers and less fluctuation in rates from year to year. For customers that do not elect to execute the new master agreement, the existing supply agreements will continue to be used. Where the existing agreements remain in use, rates will be established based on historical demands plus a twenty percent allowance for potential future increases in peak demand.

Through preliminary meetings with DWSD, several concepts have been identified for Flint, GCDC-WWS, and GLCUA to remain customers of DWSD. Four of these concepts have been studied. These are summarized in the following sections and are discussed in detail in Appendix 18.

6.2.1 Option 1 – No Change

This option assumes that Flint and GLCUA continue to purchase water from DWSD based on their existing water supply contract. GCDC-WWS is assumed to continue to purchase water as a second tier customer from Flint.

It is assumed that future water rates are established on the basis of historical demands plus a 20% proxy. It is also assumed that DWSD constructs the planned upgrades to their transmission facilities and that the cost of construction and operation are incorporated into the future cost of water.

Figure 6.1 shows the projected cost of water for Flint and GCDC-WWS; Figure 6.2 shows the projected cost of water for GLCUA.

6.2.2 Option 2 – Master Agreement (Current Demands, plus 5%)

This alternative assumes that Flint, GCDC-WWS, and DWSD execute the new master agreement. It is assumed that the contracted volumes are equal to historical demands, plus a five percent increase to provide for some growth. It is also assumed that DWSD constructs planned upgrades to their transmission facilities and that the cost of construction and operation are incorporated into the future cost of water.

Figure 6.1 shows the projected cost of water for Flint and GCDC-WWS; Figure 6.2 shows the projected cost of water for GLCUA.

6.2.3 Option 3 – Master Agreement (Future Demands)

This alternative assumes that Flint, GCDC-WWS, and GLCUA execute the new master agreement. It is assumed that the contracted volumes are equal to the projected demands assumed in Section 5. It is also assumed that DWSD constructs planned upgrades to their transmission facilities and that the cost of construction and operation are incorporated into the future cost of water.

Figure 6.1 shows the projected cost of water for Flint and GCDC-WWS; Figure 6.2 shows the projected cost of water for GLCUA.

6.2.4 Option 4 – Master Agreement (Partnering Arrangement with Capital Contribution)

DWSD officials have indicated that Flint, GCDC-WWS, and GLCUA could realize reduced costs for water through a partnering arrangement. In this scenario, Flint, GCDC-WWS, and GLCUA would execute the new master agreement and would be responsible for the construction and operation of a portion of the transmission facilities upgrades planned by DWSD. Under this scenario, the distance and elevation factors used for establishing rates can be reduced.

Figure 6.1 shows the projected cost of water for Flint and GCDC-WWS; Figure 6.2 shows the projected cost of water for GLCUA.

Figures 6-1 and 6-2 show that over the 25-year planning period, option four results in the lowest cost of water of the four options considered for continued DWSD supply. This option will be compared against the alternative of constructing a new Lake Huron water supply.

Figure 6-1: Flint and GCDC-WWS Cost of Water

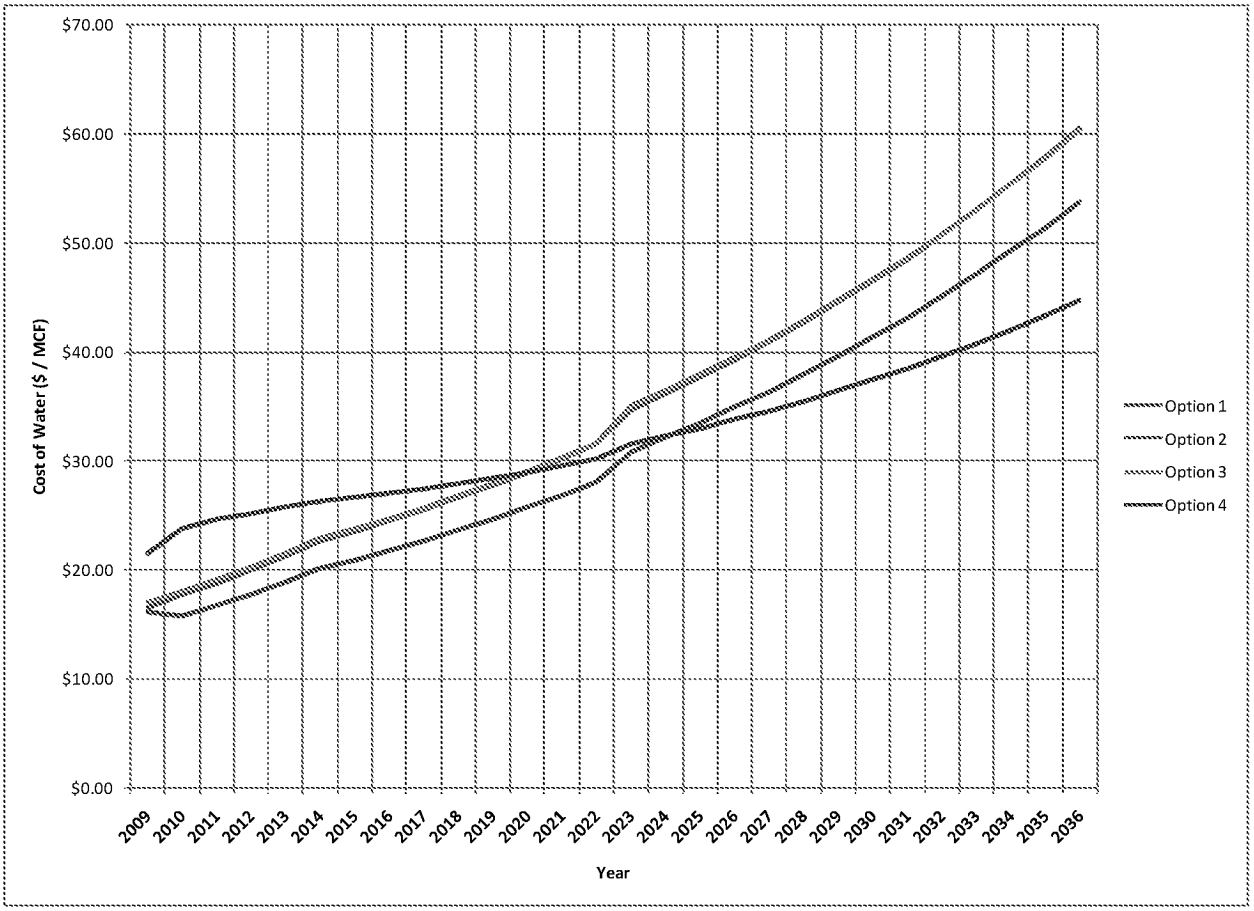


Figure 6-2: GLUCA Cost of Water

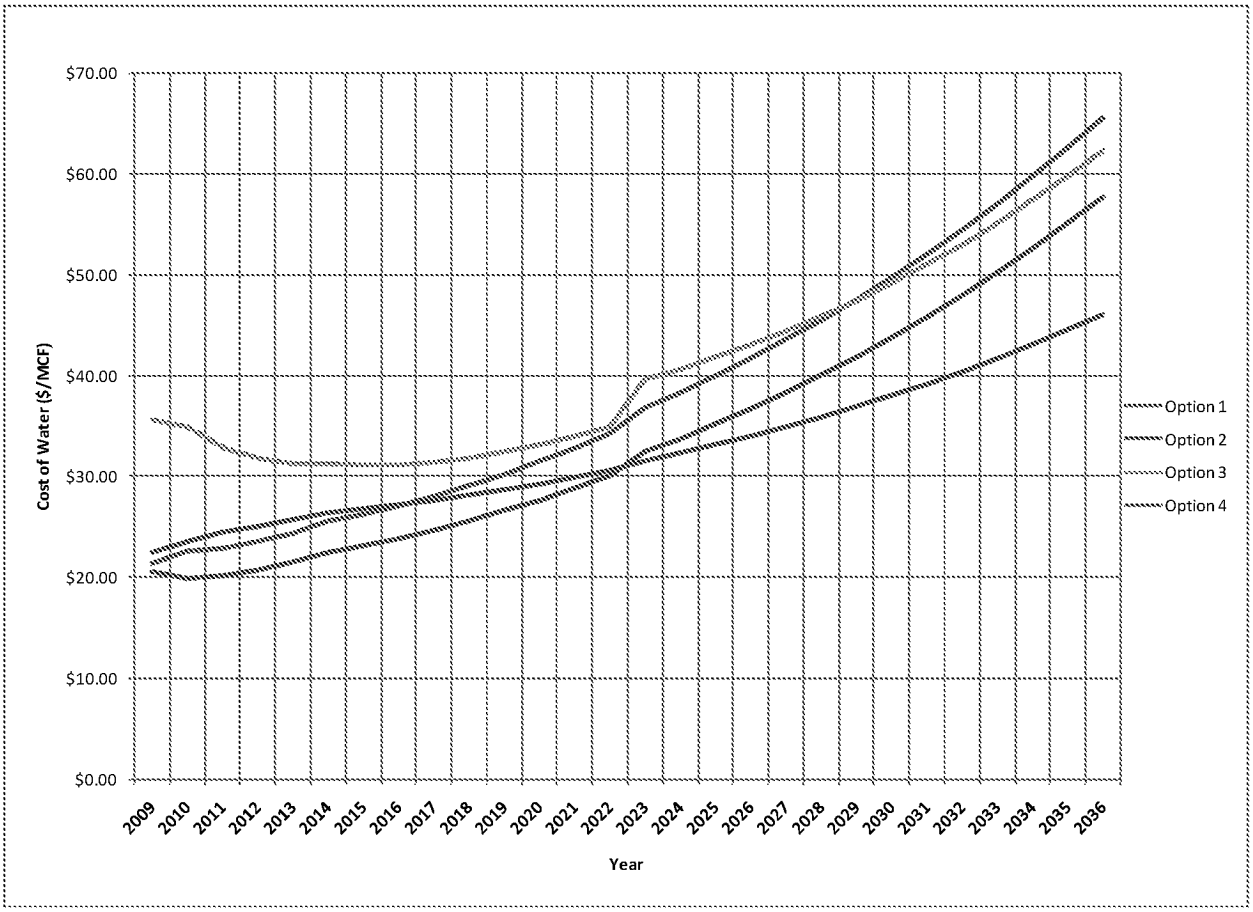


7 Alternative 2 – New KWA Lake Huron Water Supply

7.1 New Lake Huron Water Supply Concept

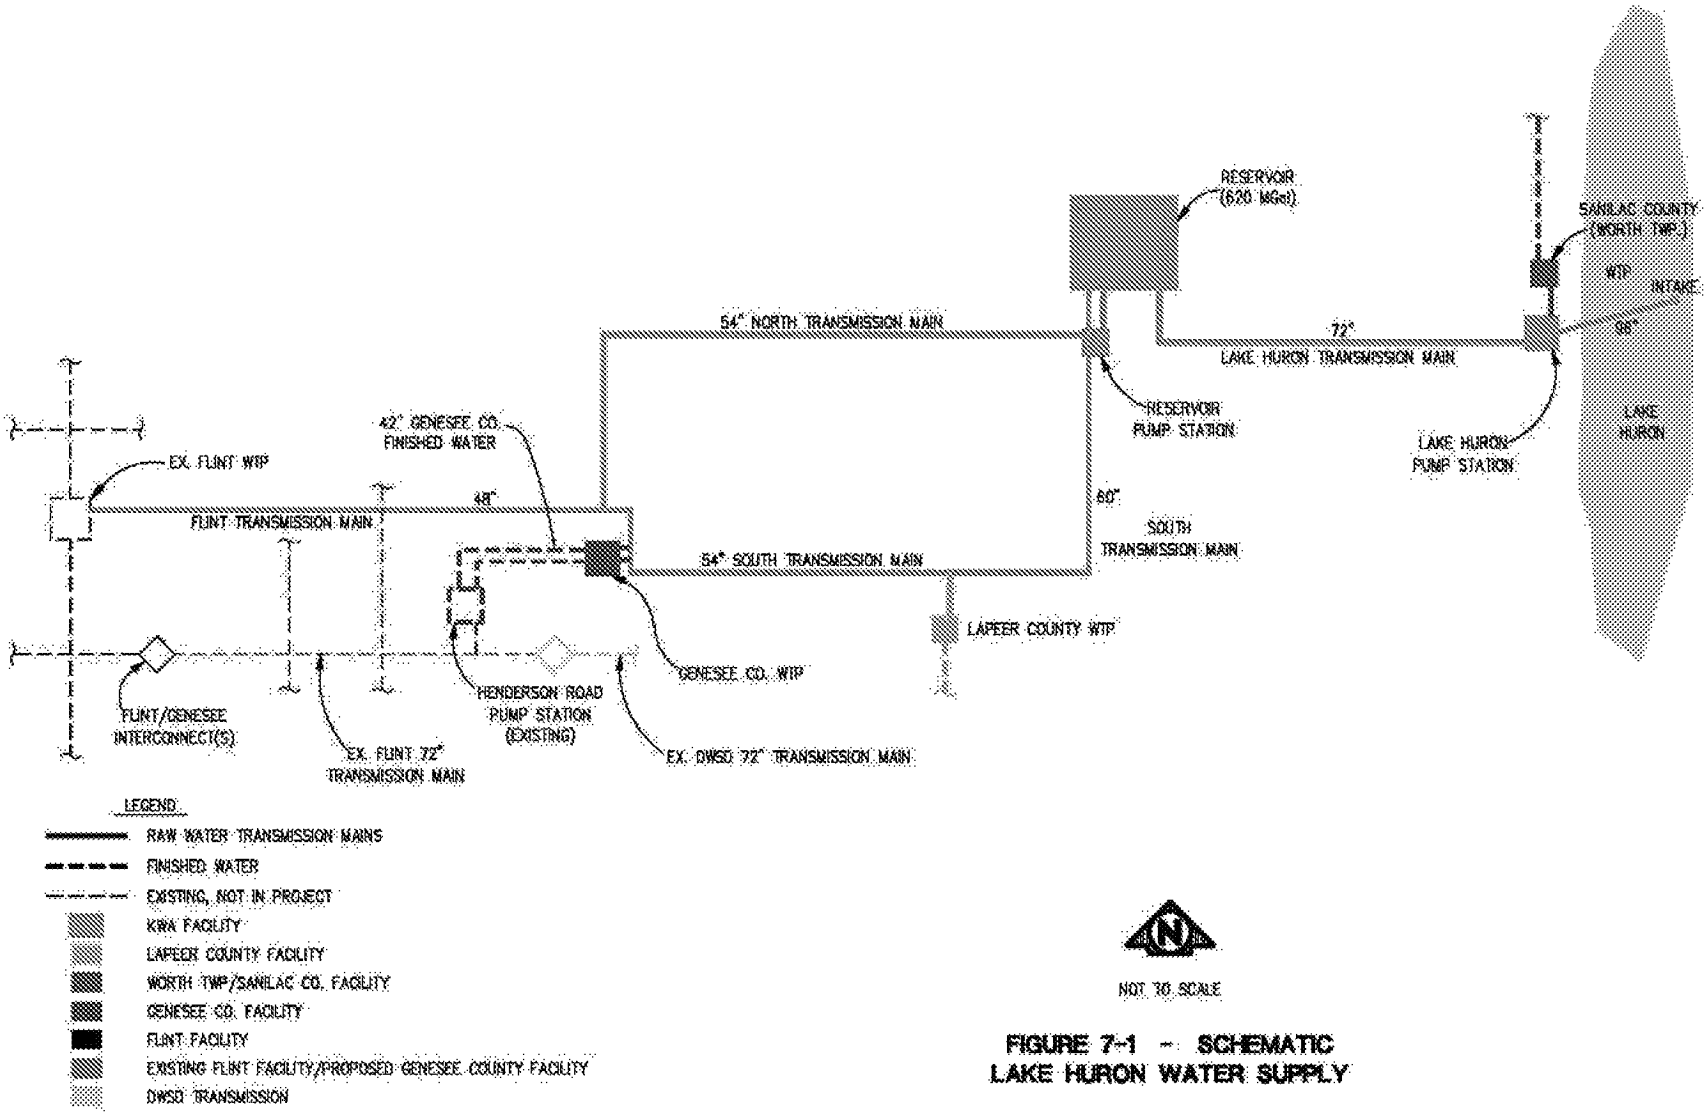
Figure 7-1 (page 9) schematically shows the proposed new water supply. Components are color coded to delineate the KWA's responsibilities and member communities' responsibilities.

The authority will be responsible for delivery of raw water to the member communities; each community will be responsible for the treatment and distribution of water to its customers.

7.1.1 Source

Water for the new supply is planned to be drawn from Lake Huron. In 2002, Genesee County purchased 230 acres of land adjacent to Lake Huron as a potential site for a new water supply facility. The site is located in Worth Township, Sanilac County, about 20 miles north of Port Huron, Michigan.

Figure 7-1: Schematic



7.1.2 Intake

A submerged crib intake is planned to be located about 3.2 miles from the shoreline, in 40 feet of water. It is believed that this location is far enough from shore to provide a steady supply of high-quality water from the upper lakes and is deep enough as to not interfere with shipping. The intake is planned with provisions for controlling zebra mussels and ice.

A single pipeline to convey water from the intake, located under the lake bottom, to a shorewell is planned. An inland reservoir will provide reliability for the single intake, which provides storage capacity for the MDD for a period of seven days. This period is considered adequate to allow for maintenance or repairs to the intake.

The proposed intake is planned with a capacity of 200 mgd, two times the projected 50-year MDD. The intake is planned to have greater capacity than other components due to the difficult construction conditions and relatively high cost, in relation to other project costs.

7.1.3 Lake Huron Pumping Station

The Lake Huron Pumping Station (LHPS) is proposed to be located adjacent to Lake Huron, pumping raw water from the intake shorewell to facilities located further inland for storage, treatment, and distribution. Two-stage pumping is planned: low-lift pumps will draw water from the shorewell and pump to adjacent ground storage tanks; high-service pumps will draw from the storage tanks and pump raw water to the inland reservoir.

The pump station facility is planned for the projected 50-year demand, although initial pumping equipment will be designed for the 25-year demand. The pump station is planned with provisions for expansion to 200-mgd capacity, consistent with the ultimate capacity of the intake.

Security provisions are planned for the pumping station facility. Backup power will be provided for system monitoring and control, security, lighting, and HVAC. Backup power for pumping is not planned; water can be supplied to customers from the inland reservoir for several days in the event of a power failure.

7.1.4 Transmission Mains

New pipelines will be necessary to transport water from the Lake Huron source to the customers.

Most of the area between Lake Huron and the proposed service area is rural. Elevations between the lake and Flint vary from a low of 590 feet to a high of 975 feet. Intermediate pumping between Lake Huron and Flint will be required to limit operating pressures.

Although specific routes have not been chosen, it is assumed that pipelines will primarily follow existing roads. Engineers have reviewed several routes to gain an understanding of road types and conditions, soil conditions, terrain, presence of existing utilities, stream and river crossings, land use, and environmental conditions that may be encountered with pipeline construction. Using this information, cost estimates for right-of-way acquisition, excavation, and restoration for the new pipelines have been developed, regardless of their route.

Engineers and planners have designed the proposed transmission mains to provide sufficient capacity for the 25-year MDD. The pipeline between Lake Huron and the inland reservoir is

planned to be a single line; the reservoir will have sufficient storage to meet maximum demand over a consecutive seven-day period, allowing for repair or maintenance of the pipeline. Other pipelines are planned to be dual lines, except where alternative provisions for reliability are available.

A specific pipeline material has not been selected, however, it is assumed that pipe may be ductile iron pipe (DIP), concrete pressure pipe (CPP), or steel pipe. DIP is available in sizes up to 64 inches in diameter.

Pipeline capacity has been developed using the following criteria:

- Maximum operating pressure: 200 psi
- Hazen Williams C-factor: 120

Figure 7.1 (page 9) shows the proposed pipeline sizes to provide capacity for the 25-year MDD.

The following pipeline appurtenances have been included in the initial planning for transmission mains.

- Isolation valves: electric actuated gate valves, at six-mile intervals
- Provisions for flushing, draining, and surge relief: periodically at streams or drains
- Provisions for air release: at high points

Additional capacity in excess of the projected 25-year MDD can be provided by the addition of intermediate pumping facilities, construction of another pipeline, or additional reservoir storage. As demands approach the projected 25-year MDD, an evaluation of future needs and alternatives should be completed to develop a specific plan for future expansion.

7.1.5 Raw Water Reservoir and Pumping

The concept for a new water supply includes an inland reservoir. The planned reservoir provides storage inland, away from Lake Huron, which can supply water to KWA customers when the single pipeline between the lake and the reservoir or the intake is out of service for repairs or maintenance. The proposed reservoir has a capacity of 620 million gallons, which can supply the MDD of KWA customers for more than seven consecutive days.

A single-cell reservoir is planned initially, based upon 25-year demands. A second cell can be added for increased future demands. A specific site for the reservoir has not been selected, but at least 190 acres of land is recommended to provide space for future expansion.

Water from the LHPS will normally be discharged directly into the reservoir; a second pumping station located at the reservoir will draw water from the reservoir for pumping to downstream customers. Although the flow-through operation should minimize loss of water quality, provisions will be provided for chemical control of algae and other potential water quality concerns in the reservoir.

Twin pipelines are planned downstream of the reservoir to provide reliability; one pipeline will be available to supply water in the event one is out of service for repairs or maintained. Together, the two pipelines have capacity for the 50-year MDD; however, an individual pipeline will have capacity only for 75% of the MDD. During periods when one pipeline is out of service for repairs or maintenance, restrictions on outdoor water use may be required to reduce demands to this level.

The reservoir pump station is planned to pump concurrently to both pipelines. Five 20-mgd pumps are planned initially to deliver the 25-year MDD. Space is provided in the planned facility for the addition of two pumps to meet the 50 year demand.

Backup power for system control and monitoring, security, lighting, HVAC, and pumping are included for the planned facility.

7.2 Service to KWA Member Communities

The concept for a new Lake Huron water supply assumes that the KWA will deliver raw water to each member community and that each community will be responsible for its treatment and distribution. Additional facilities or modifications will be required by each member community to replace their existing water supply. Each member community has different needs described below.

7.2.1 Sanilac County

The new water supply can provide service to Sanilac County communities from any point along the proposed pipeline. For this study, it is assumed service is provided to Worth Township. The facilities and cost for providing service to Worth Township will be similar for other communities. Worth Township is presently supplied finished water from the Lexington Worth Township's Utility Authority (LWTUA); LWTUA is supplied water from the Village of Lexington. LWTUA distributes water to Worth Township properties along Lake Huron and M-25. The southerly end of the LWTUA distribution system is adjacent to the planned site for the intake and pumping station for the new KWA water supply.

To supply Worth Township with the new Lake Huron water supply, treatment will be required. Raw water from the LHPS ground storage tanks will be pumped to an adjacent treatment facility to be treated by microfiltration, and disinfection prior to re-pumping to the existing LWTUA distribution system. Microfiltration is a well established treatment process for treating Great Lakes water. Microfiltration equipment is modular, and future expansion, if necessary, is easily accomplished by the addition of modules and building expansion.

An analysis of the LWTUA distribution system to evaluate the impact of a new supply has not been completed.

7.2.2 Lapeer County

DWSD currently provides treated water to Lapeer County communities of Lapeer, Imlay City, Almont, and Mayfield Township. Provisions for water treatment will be required for the new supply, to provide service to these and other Lapeer County communities.

Alternatives for treatment include a single treatment plant for Lapeer County, treatment plants for individual communities, or supply of finished water from Genesee County. After preliminary consideration, the alternative of a single Lapeer County facility is included in this study. The selection of the best alternative for treatment should be made after customers and demands are finalized.

Transmission piping, to convey treated water from the treatment facility to the four communities, is included in the project costs for Lapeer County. Treatment by microfiltration is planned. Treatment equipment is modular, and facilities can be expanded relatively easily.

The proposed treatment facility and finished water transmission mains have been planned for the 25-year MDD. Treatment facilities can be easily expanded for increased demands. Pipeline capacity can be increased by constructing additional pipelines or adding pumping capacity.

7.2.3 Genesee County

If the current finished water supply from Flint and DWSD is replaced with the new Lake Huron supply, several modifications to the GCDC-WWS system will be required.

7.2.3.1 Water Treatment

GCDC-WWS currently purchases finished water for distribution to its customers. With the proposed KWA raw water supply, treatment will be required prior to distribution.

Conventional treatment by clarification and filtration is planned. Specific processes include rapid mixing, flocculation, high-rate plate settler clarification, and granular media filtration. Provisions are included for the future addition of treatment processes, if necessary for compliance with regulations or to improve treatment.

The water treatment plant is planned to have four equally sized pretreatment trains. The loading rate of filters at the initial MDD is conservative. It is assumed that once the plant is operational, plant-scale trials will demonstrate the suitability of high-filter surface loading rates, which are expected to ultimately provide sufficient capacity for the 50-year demand without the addition of more filters.

7.2.3.2 Henderson Road Pumping Station

Finished water from the planned GCDC-WWS water treatment plant will be pumped to the Henderson Road Pumping Station (HRPS). The HRPS currently pumps water to the east and north areas of Genesee County. With the planned new Lake Huron supply, the HRPS will provide high service pumping, supplying finished water to all of the GCDC-WWS distribution system. Additional pumps must be added for its increased service area.

Three pumps currently provide a firm capacity of 16 mgd and a total capacity of 30 mgd. Additional pumping capacity of 8 mgd is needed to meet the projected demands during the initial years of operation. Additional pumping capacity of 16 mgd (from current capacity) is required for the projected 25-year demands. Expansion of the HRPS building is required to accommodate both of the additional pumps. Emergency backup power is currently available at the HRPS facility and is adequate for operating three 8-mgd pumps.

The HRPS is presently supplied water by a 48-inch pipeline from Flint's 72-inch transmission main. The 48-inch pipeline will need to be reconfigured to allow the HRPS to pump to the 72-inch transmission for distribution to the south and west areas of the county. This requires replacement of the meter and check valves with a control valve at the connection to the 72-inch main.

7.2.3.3 Flint's 72-Inch Transmission Main

A transmission main supplies water from the DWSD system to Flint from DWSD's Lake Huron treatment plant, just north of Port Huron. East of Genesee County, the pipeline is owned and operated by DWSD. The City of Flint owns and operates the 72-inch transmission main running from the DWSD meter located near the county line, through

Genesee County to the Flint water treatment plant. The GCDC-WWS distribution system is supplied through eight connections to the Flint 72-inch main.

Although the 72-inch main will no longer be necessary to convey water to Flint under this concept being studied, maintaining the main's operation will allow it to continue to supply the GCDC-WWS distribution system. In this role, future responsibility for the main should be transferred from Flint to GCDC-WWS.

7.2.4 Flint

Prior to contracting with DWSD in 1965 for water supply, the City of Flint treated water from the Flint River. DWSD delivers finished water to Flint, but the city's water treatment plant has been maintained and operated on a limited basis as a backup supply. Some modifications at the city's treatment plant will be necessary to allow it to reliably provide treatment on a continuous basis. Proposed modifications required for full-time operation and treatment of Lake Huron water include:

- Piping and metering to deliver raw water
- Power upgrades, including emergency / backup power
- Disinfection upgrades
- Chemical feed systems
- Finished water pumping
- Updated controls and monitoring
- Added security measures

7.3 Permitting

Construction of the proposed new water supply requires permits and approvals from federal, state, county, and local agencies, railroads, and utilities. It is expected all required permits and approvals can be obtained during design. A permit to withdraw water from Lake Huron has been issued by the MDEQ.

7.4 Engineer's Opinions of Cost

Engineers and planners have developed opinions of cost for construction of the new water supply and for its ongoing operation and maintenance, using the criteria identified in Section 3. Costs include contingency allowances of 20%, and engineering, legal, bond, and administrative allowances of 17%.

7.4.1 Construction Costs

Table 7-1 below summarizes the project cost of a new water supply; Table 7-2 (page 15) shows the cost distribution among the KWA member communities. KWA costs are distributed to members proportionally, based upon each community's share of the total capacity provided.

Table 7-1: Project Costs

	Engineer's Opinion of Cost
Construction Cost - New Water Supply (KWA)	$317,367,567
Construction Cost - City of Flint Treatment	$5,319,000
Construction Cost - GCDC-WWS Treatment	$76,607,003
Construction Cost - Lapeer County Treatment	$29,150,000
Construction Cost - Sanilac County Treatment	$1,328,000
Subtotal - Construction Cost	**$429,771,570**
Design Contingencies (5%)	$21,488,579
Construction Contingencies (15%)	$64,465,736
Engineering, Bond, Legal, & Administrative (17%)	$73,061,166
Utilities	$10,385,000
Property	$2,597,720
Total Project Cost	**$601,769,771**

Table 7-2: Project Costs for New Lake Huron Water Supply

Project Component	Total Project Cost	Sanilac Co. Share	Lapeer Co. Share	GCDC-WWS Share	Flint Share
KWA Lake Huron Water Supply	$443,885,767	$813,723	$86,312,736	$188,899,927	$167,859,381
New Sanilac Co. Facilities	$1,849,360	$1,849,360			
New Lapeer Co. Facilities	$40,009,060		$40,009,060		
New Genesee Co. Facilities / Upgrades	$110,038,554			$110,038,554	
New Flint Upgrades	$5,987,030				$5,987,030
Totals	$601,769,771	$2,663,083	$126,321,796	$298,938,481	$173,846,411

7.4.2 Treatment Costs

Table 7-3 summarizes the treatment costs during the first year of operation, assumed to be 2014. The costs for operating and maintaining the new KWA water supply water to each community is distributed on the basis of each community's projected annual consumption. These costs are combined with local treatment costs to determine the total cost for supplying treated water to each community. Costs are expressed in dollars per 1,000 cubic feet ($/MCF) to allow comparison with DWSD commodity units.

The last column of Table 7-3 below shows the current DWSD commodity charges, for comparison with the projected 2014 cost of treatment by the new Lake Huron supply being studied.

Table 7-3: Projected Initial Treatment Costs with New Lake Huron Water Supply

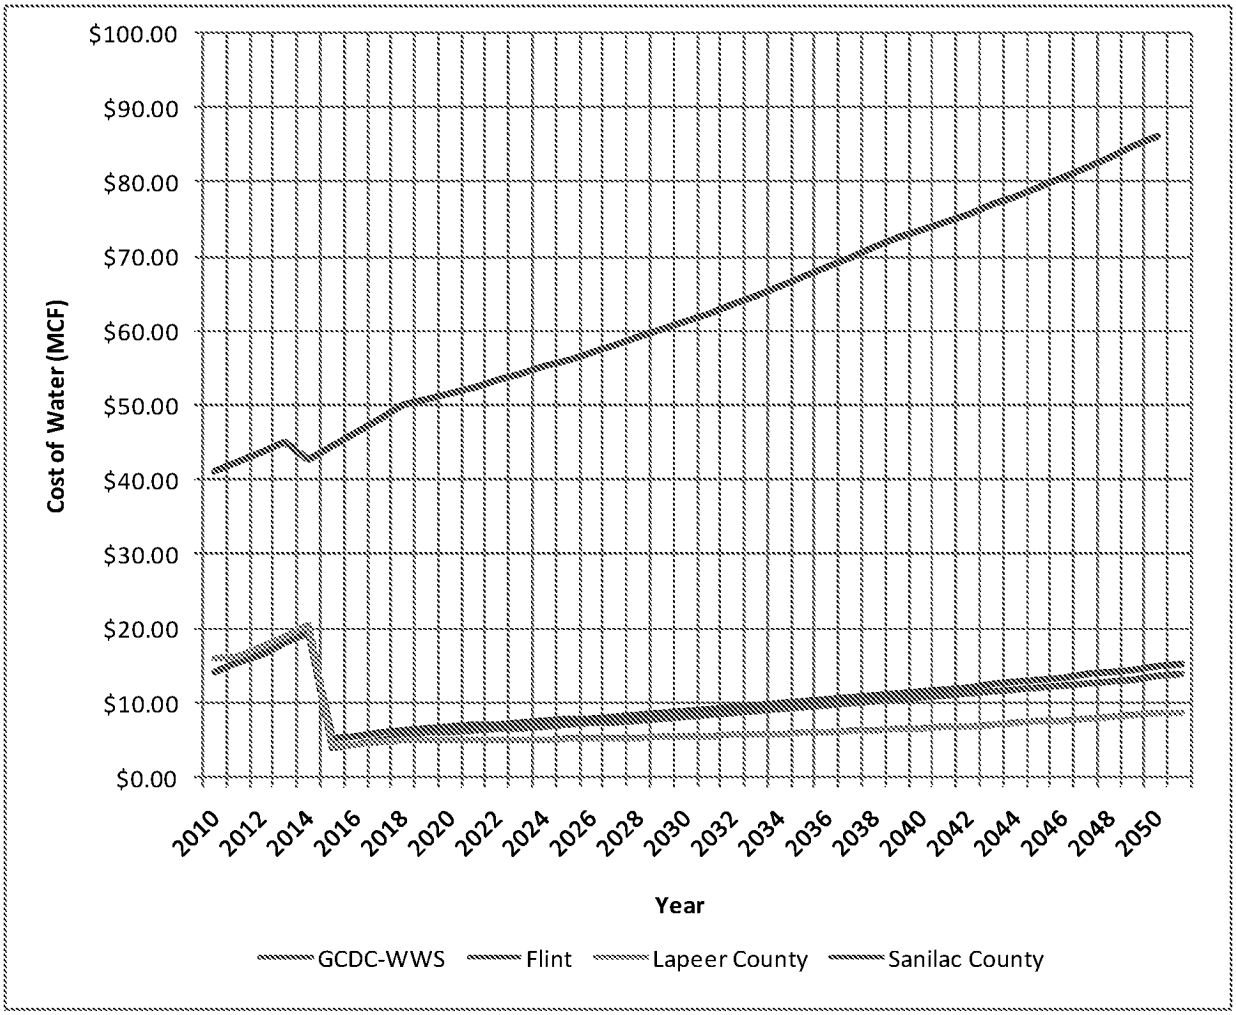
Community	KWA ($/MCF)	Local ($/MCF)	New Water Supply Treatment Cost (2014)	2009-2010 DWSD Rate
Sanilac County	$1.30	$41.56	$42.86	N.A.
Lapeer County (GLCUA)	$1.30	$3.11	$4.41	$16.10
GCDC-WWS	$1.30	$2.86	$4.16	$14.32
City of Flint	$1.30	$4.13	$5.43	$14.32

Notes
1. New water supply costs based on projected annual consumption of each community in year 2014.
2. Costs do not include debt retirement or depreciation expense.

7.4.3 Annual Treatment Costs

Projected average annual treatment costs resulting from the new water supply are shown through the year 2050 on Figure 7-2 (page 16). Neither debt retirement nor depreciation is included in the annual operating and maintenance expenses shown on Figure 7-2.

Figure 7-2: Cost of Treated Water



7.5 Alternatives for Cost Reduction

The concept developed for a new water supply is based on criteria established prior to beginning the study. There are alternatives which can reduce the cost of a new water supply, yet provide a safe, reliable supply. Project costs can be reduced by more than $100 million through incorporation of some of the alternatives identified here.

7.5.1 Cost-Reduction Alternatives – KWA Lake Huron Supply

- Provide a single supply pipeline (relocate reservoir further inland)
- Reduce the capacity of the Lake Huron intake and pumping station by 50%
- Negotiate an agreement with DWSD to provide backup and eliminate the reservoir
- Provide single-stage pumping at the LHPS
- Reduce size of transmission mains by either increasing operating pressures or reducing capacity

7.5.2 Cost-Reduction Alternatives – GCDC-WWS

- HRPS – construct additional 10-MG storage in lieu of redundant finished water pipeline
- Provide treatment by microfiltration instead of conventional treatment
- Locate WTP at HRPS site

7.5.3 Cost-Reduction Alternatives – Flint

- Reduce capacity of planned facilities

7.5.4 Cost-Reduction Alternatives – Lapeer County

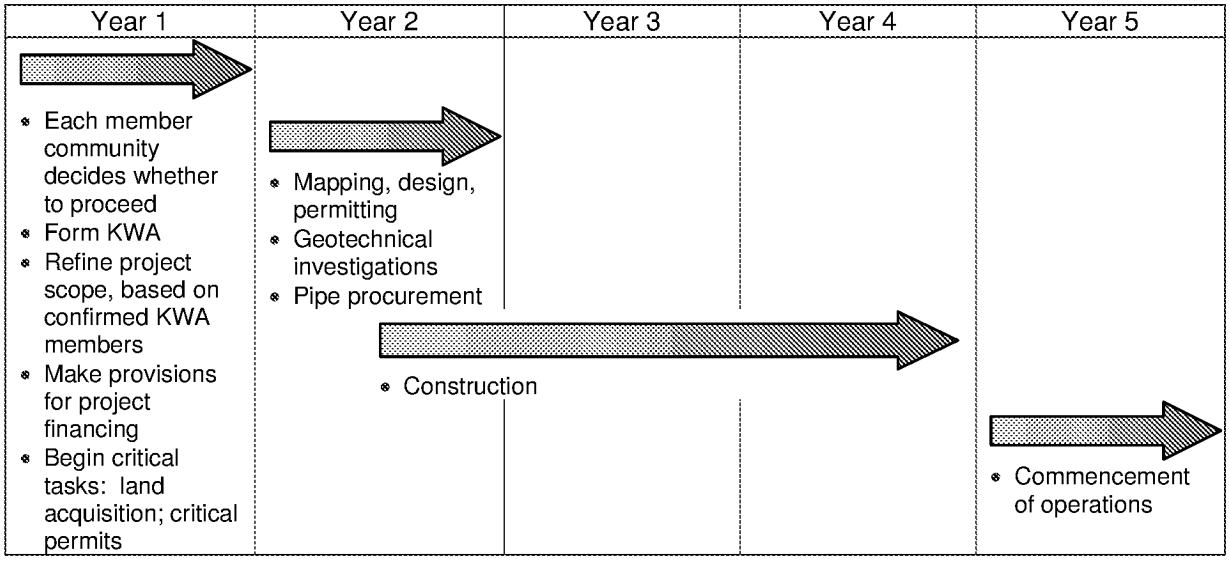
- Reduce capacity of planned facilities
- Other options for treatment and distribution may reduce costs once actual service area and demands are defined.

7.5.5 Cost-Reduction Alternatives – Sanilac County

- Identify specific customers for water supply and determine facilities and costs for specific conditions

7.6 Implementation

The following schedule shows that planning and design of the new water supply can be completed within four years. Early procurement of pipe and materials, division of construction work to allow for more contractors or crews, advance work on critical issues, and other measures can be incorporated in the proposed project to accelerate the schedule.

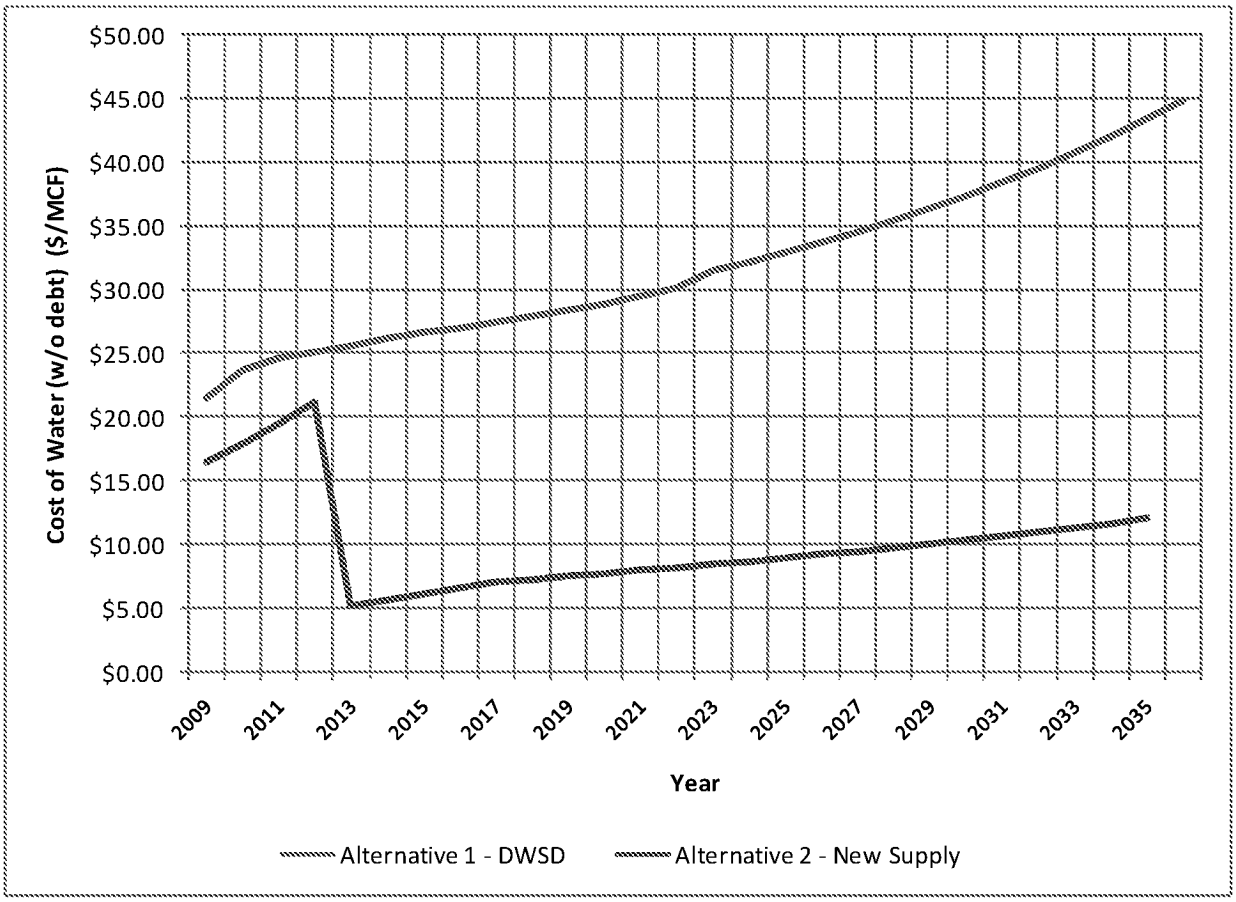


8 Comparison of Alternatives

With the investments in facilities planned by DWSD, either of the alternatives considered are believed to provide a reliable, long-term water supply with sufficient capacity for the needs of the study area. Both alternatives address the criteria established for reliability, water quality, quantity and security. The primary difference between the two alternatives is economics. Regardless of the alternative selected, a new pipeline and other facilities are planned for construction. As a result, the cost of water will increase regardless of the alternative selected; however, each will be affected differently.

Figure 8-1 shows the projected cost of water over the planning period for both alternatives. For demonstration purposes, the cost of water for the new Lake Huron water supply alternative does not include the cost of repayment of debt incurred for its construction. The graph shows that without the debt of constructing the new system (or once the debt for its construction is repaid), the cost of water from the new supply will be substantially less than continuing to purchase water from DWSD.

Figure 8-1: Comparison of Alternatives



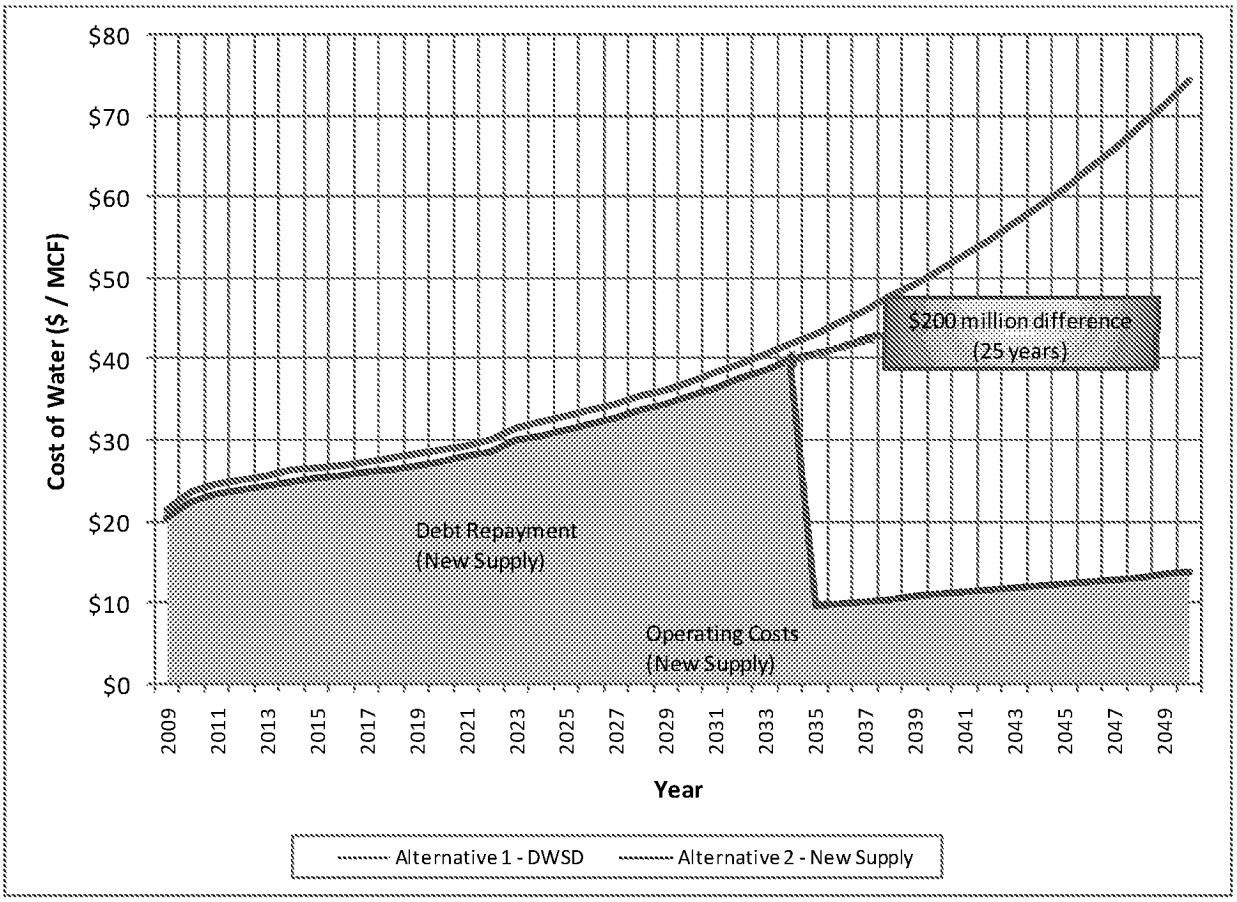
9 Debt Service

The cost of water for the DWSD alternative was developed using the DWSD rate methodology which includes recovery of capital investment. For comparison, the cost of water for the new Lake Huron supply should include the cost of financing its construction.

If 25-year bonds are used for financing the construction of the new Lake Huron supply, analysis has shown that the cost of water for the new Lake Huron supply can be less than with continuing service from DWSD. Over the 25-year life of the bonds, the total cost of water with continued DWSD supply is projected to be $200 million greater than with the new Lake Huron supply.

Figure 9-1 demonstrates the cost savings resulting from new Lake Huron supply during the 25-year bond period; the figure also shows the reduction of the cost of water with new Lake Huron supply once the debt in paid back.

Figure 9-1: Comparison of Alternatives



10 Other Impacts of Long-Term Water Supply Alternatives

In addition to the criteria established in Section 2 for comparison of long-term water supply alternatives, there will be other impacts. A review of some of these follow.

10.1 Employment

Either alternative will require the construction of new facilities. Depending on the alternative, up to 1,200 construction jobs will be created over a three-year period. With Alternative 1, the new facilities constructed by DWSD must comply with Executive Order 4001 of the Mayor of Detroit, which requires that either at least 50% of labor for construction is Detroit residents or a penalty is assessed against the contractor. Without the restrictions, Alternative 2 offers the Genesee, Lapeer, and Sanilac County region more opportunity to furnish local labor for construction.

Continued DWSD supply will result in a negligible increase in operation and maintenance staffing once the new facilities are constructed, since water will be supplied from an existing treatment plant. Approximately 45 new full-time positions will result from operation and maintenance of three new water treatment plants and other facilities consequential to the new Lake Huron water supply.

10.2 Facility Life

DWSD plans for construction of a new section of transmission main; this main is a small piece of the overall DWSD system. Although the facilities planned by DWSD will be new, most other

components of the DWSD system are 50 to 100 years old. As a result of the age of the DWSD system, future operating and replacement costs are anticipated to continue to be greater with continued DWSD supply than with the new system provided by KWA.

10.3 Environmental Impacts

Both alternatives will result in approximately 70 miles of new transmission main. Since specific routes have not been determined, it is assumed that both alternatives will have similar impacts environmentally as a result of pipeline construction. Permitting for construction of either pipeline alternative is expected to be of a routine nature. Impacts are anticipated to be temporary, occurring only during the construction period.

Continued supply from DWSD provides for supply of water through an existing intake from Lake Huron. The alternative for a new supply requires construction of a new intake. Environmental impacts during construction of the new intake will be of a temporary nature. With either alternative, the total quantity of water drawn from Lake Huron will be equivalent. A permit for withdrawal from Lake Huron has been issued for the new water supply.

11 Glossary

25 Year Demand – The projected quantity of water needed in the future (in 25 years).

Average Day Demand – The quantity of water desired over a period of 24 hours, averaged over a year.

Capacity – The greatest quantity that can be conveyed or processed by a particular component, or the limiting quantity of a facility or series of components.

Clarification – Water treatment process providing for the removal of particles from water using gravity settling.

Construction Contingencies – An allowance in the project budget so money is available in the event unexpected conditions are encountered during the construction phase which requires additional work to finish the project.

Construction Cost – The cost of constructing proposed facilities; including labor, materials, and contractor's equipment charges and fees.

Crib – Submerged structure which surrounds inlet to intake pipe for protection.

Demand – The quantity of water desired by customers.

Design Contingencies – An allowance in the project budget so money is available in the event that design and permitting requirements result in the need for additional facilities, longer pipeline routes, more difficult construction conditions, or other conditions which increase the project cost.

Disinfection – Treatment process to destroy or prevent the growth of disease-carrying microorganisms.

Distribution –Delivery of water to customers (homes, businesses, institutions, etc.) by a pipe network.

ENR Construction Cost Index – An index for "time adjustment of construction costs". Engineering News- Record (ENR) is a long established publication serving the construction industry. The index is computed based upon the cost 200 hours of labor, 25 cwt structural steel, 1.128 tons cement, and 1,088 board feet of lumber. The index has been computed over a 100+ year history.

Filtration – Treatment process using a porous material to trap and remove suspended particles from water.

Finished water – Water that has received treatment and meets standards and regulations established for drinking water.

Firm Capacity – The maximum quantity of water that can be treated or pumped in the event that the largest mechanical component or pump is out of service.

Governmental Authority – A governmental entity, comprised of other governmental units (cities, townships, counties, etc.), for a special purpose such as sharing services (water utilities, public safety, libraries, etc.)

Ground Storage – Tank at ground level for the storage of water.

Hazen Williams C Factor – Engineering coefficient used for considering the effect of pipe material on hydraulic capacity.

High Service – Term used to describe pumping against high pressure, often resulting from elevation increases and friction in pipeline(s).

Intake – Submerged pipe inlet to draw water from a lake.

Local Storage – Water storage tanks located in the distribution system, often providing for supplying water for peak demands because of their proximity to the customers' locations.

Low Lift – Term used to describe pumping against relatively low pressure, usually where water must be lifted to provide for another treatment process.

Malevolent – Actions intended to result in harmful or malicious impact.

Maximum Day Demand (MDD) – The maximum quantity of water desired by customers over any 24 hour period.

Microfiltration – Treatment process using fine-pored synthetic membranes for removal of particles in water.

O&M – Acronym for operating and maintenance. Operating and maintenance is the ongoing cost for operation, including labor, power and utilities, chemicals and supplies, maintenance and repairs, supervision, and administration.

Peak Hour Demand – The greatest quantity of water desired for consumption during any one hour period.

Project Costs – The total cost of constructing proposed facilities; including the cost of construction plus other costs expected during the planning, design, and construction phases. Other costs often include land acquisition, utility service, engineering, legal fees, and appropriate contingencies.

Proxy – An allowance for future increased water use assumed by the water supplier, in absence of information provided by the water customer.

Raw Water – Water in its natural state, prior to treatment.

Reservoir – Earthen basin or tank for the storage of water.

Residuals – Solid materials resulting from the treatment of water. Residuals may include solids (silt, algae, etc.) removed from the source water or the precipitate resulting the addition of chemicals for treatment.

SCADA – Acronym for "Supervisory Control and Data Acquisition". SCADA is a term commonly used to describe the instrumentation to measure or monitor equipment and/or processes, and controls to operate equipment.

Shorewell – Vertical shaft located adjacent to lake, extending from the ground surface down to the intake pipe.

Zebra mussels – small shellfish introduced to Great Lakes through ballast discharge from international shipping. Zebra mussels are a concern to waterworks because they attach to submerged intakes and pipes, resulting in reduced capacity or plugging.

Attachments: Request for WQ Monitoring 10-31-12 wb-swas-reqform_247026_7 (1).doc

Bill –

The request from EPA regarding program integration reminded us that we needed to follow-up on our request last fall for WRD to monitor at selected intakes for a number of chemicals of concern (see attached).

It's our understanding that WRD were going to notify applicants in Feb/March, but we have not heard anything. Could you update us on the status of this request? And if this is moving forward, would it be appropriate to bring up at the Region 5 director's meeting?

Liane

Not really. Michigan does a good job controlling nutrients with a focus on phosphorus.

>
> To follow-up on Tom's e-mail below, we'd like to include a session on CWA/SDWA integration during the upcoming state directors' meeting. This session is currently scheduled for Tuesday, April 16, at 3:00

p.m. The proposed topics include national and regional EPA CWA/SDWA integration nutrient-related activities, such as: (1) activities in the Western Basin of Lake Erie, (2) state nutrients frameworks, and (3) WI nitrate project status. We'll be discussing where and how to better coordinate between states and Region 5 during this meeting.

If you and/or any of your staff would be interested in presenting information about your work in nutrients, harmful algal blooms, or what projects are happening in Lake Erie, etc., please let me know. And if you have additional ideas for topics, please let me know that, too.

Thanks, and I look forward to seeing you in April!

WATER QUALITY MONITORING REQUEST

Completion of this form is voluntary. Submission of this form is not required.

Requestor Information (please print or type):			
NAME Richard Benzie, Chief, Community Drinking Water Unit			ORGANIZATION Office of Drinking Water and Municipal Assistance, DEQ
MAILING ADDRESS 525 W. Allegan			PHONE # (517) 241-1245
CITY Lansing	STATE MI	ZIP 48909	E-MAIL ADDRESS benzier@michigan.gov

Please identify the water body name(s) and location(s) recommended for monitoring.		
WATER BODY NAME(S) Raisin River, Lake St. Clair Shoreline, Flint River, Huron River, Platte/Boardman Watershed, Elk/Pine/Betsie Watershed and Ontonagon/Iron Watershed	LATITUDE See below	LONGITUDE See below

_____ ¼ of _____ ¼ Section: _____, Town: T_____, Range: R_____, Township: _____, County: _____.

PLEASE DESCRIBE THE REASON FOR MONITORING, LIST ANY QUESTIONS YOU WOULD LIKE ANSWERED, AND SPECIFY THE MONITORING PARAMETERS DESIRED:

The locations listed below are drinking water intakes located in the water bodies listed above, most of whom are targeted for monitoring in the Strategic Environmental Water Quality Monitoring Program for Michigan's surface waters. In addition to the parameters WRD typically monitors in targeted watersheds, Michigan's Public Water Supply Supervision (PWSS) program requests these locations also be sampled for 1,4-dioxane, chlorate, perfluorinated compounds (PFOS, PFOA, PFNA, PFHxS, PFHpA and PFBS), and the following hormones: 17-B-estradiol, 17-@-ethynylestradiol, estriol, equilin, estrone, testosterone and 4-androstene-3,17-dione. These parameters are among the 30 emerging contaminants that are included in EPA's third Unregulated Contaminant Monitoring Rule (UCMR3) that requires certain public water systems to monitor treated drinking water between 2013 and 2015. Monitoring at these intakes can be easily accomplished as sampling stations are already available. Results of this monitoring will provide drinking water systems with the level of emerging contaminants in their source and allow them to focus their Source Water Protection Programs on reducing the presence of these contaminants in their source waters instead of employing costly treatment. It will also facilitate a collaborative effort between the Safe Drinking Water and Clean Water (PWSS and NPDES) programs in Michigan.

SUPPLY NAME	Intake Name	LATITUDE	LONGITUDE
City of Adrian	Lake Adrian Intake	41.91284	-84.03665

Subject: Meeting with Director

Sonya,

I apologize that I am now getting you information regarding our meeting with Director Wyant on Monday with my client, the Genesee County Drain Commissioner Jeff Wright. The purpose of our meeting will be to discuss projects on the Drinking Water Revolving Fund for both Genesee County but also Karegnondi Water Authority.
Part of the discussion will be the hope of having The MDEQ endorsing the project and approving DWRF and other funding, because the project will, at long last, provide a water supply that will truly be reliable. One of the greatest problems for this area is that when the water supply from Detroit is interrupted, this area will experience water restrictions, boil water notices and the complete shutdown of our restaurants, hospitals and many area businesses.
My primary contact for information has been unavailable for the last two weeks, and I apologize for any inconvenience. If I am able to obtain any other information I will be happy to share it with you. I have attached a PowerPoint with general talking points as well as an Executive Summary from an Engineering Report which further discusses the project in comparison to the current system this region has for water.
Thank you for your patience.

Subject: RE: Call from MI citizen in Flint

Richard and Liane,

FYI.

Mike, Adam, and I had a conference call with Flint this morning to go over some MOR and monitoring details.

We have received bacti and distribution Cl data, but only have some preliminary MOR data. Remaining MOR data will be provided as required by the end of the month.

They appear from what we discussed to be conducting the required monitoring and preliminary data suggest everything is meeting standards. Unit 37 samples will be collected next week, but as previously indicated we do have results from test runs that demonstrate everything was meeting standards.

The WTP has not been Fluoridating at this time, as we suggested they focus on required treatment until things settle down. They indicated they should be ready by June 1 to start Fluoridation. They do have around 0.15 ppm in the raw water.

If want any additional info just let us know.

Subject: RE: Call from MI citizen in Flint

I suspect there may has been excessive runoff and storm water discharges with the weather we have been experiencing, but you will have to ask the Water Resources Division for details. If a release or overflow is unusual or not expected, both we and the systems should get contacted through the PEAS contact lists.

We expect surface water treatment plants to be capable of treating their source adequately from a microbial standpoint regardless of deteriorating source water quality.

One answer to his question is that any time a system is unable to meet drinking water standards or suspects there may be a water quality problem as a result of an unexpected event (spill, pressure loss, etc.), they are required to notify the consumers and provide appropriate precautionary advice. So no news should be considered good news.

We can talk more next week.

The citizen, Mr. Lathan Jefferson, contacted Mindy Eisenberg at Headquarters. I will follow up with you all next week at her request. Mike, if I could get copies of the lab analyses for regulated contaminants and their MOR for the new Flint water, I'd appreciate it. Richard and Mike, Mindy is wondering if there were any contaminant releases recently into the Flint River? See my response below.

Cc: Poy, Thomas
Subject: RE: Call from MI citizen in Flint to you

Hi, Mindy. Thank you for listening to him. Mike Prysby, the DEQ district engineer who oversees Flint water treatment and distribution, doesn't have Flint's Monthly Operating Report yet, but he has results from Phase 2/5 and other required contaminant analyses (required to meet so the plant could be put on-line), and health standards are being met, he said. I will ask Mike to send me copies of their Phase 2/5 results and the MOR, and his analysis. I didn't specifically ask about any

contaminant releases, but DEQ has historically been consistently reliable in reporting to us any contaminant releases---but I will ask Mike that also. Richard Benzie is out of the office til Friday or Monday, but I will be in Lansing auditing set-asides next Monday, so I will touch base with him also.

Pat Cook is the DEQ drinking water treatment expert, who Lathan Jefferson talked to at MI DEQ this week. Pat Cook was out of the office at training so I was unable to find out what he told Mr. Jefferson. Mr. Jefferson refused to take Mike Prysby's phone number, which is why he didn't mention Mike's name to you.

Hi Jennifer,
Yes, I just spoke with him and he explained the situation. He didn't mention Mike Prysby but did mention a Pat Cook from DEQ who he has spoken with about the health issues. What analyses is Flint doing? Do they have any analyses for the Phase 2/5 rules? He expressed concern about closed GM plants along the river. Could there be releases? Have you spoken with Richard Benzie?

Thanks

To: Eisenberg, Mindy
Cc: Poy, Thomas; Hyde, Tinka
Subject: Call from MI citizen in Flint to you

Mindy—A Mr. Lathan Jefferson has talked with Tinka, and also with me just now about his drinking water quality. Flint has just switched from Detroit water (from Lake Huron) to Flint River water within the past couple of weeks. Flint River quality is not great, but there is a surface water treatment plant producing water that is currently meeting SDWA standards, according to the MI DEQ district engineer, Mike Prysby. The water has more hardness, and pH and alkalinity may be different from Detroit water. Mike will have more information on the difference in water quality when he receives Flint's first monthly operation report this week. Mr. Jefferson said he and many people have rashes from the new water. He said his doctor says the rash is from the new drinking water, and I told him to have his doctor document this and he can bring to the attention of the MI DEQ, since lab analyses to date show that the drinking water is meeting all health-based standards. He has no interest in speaking with Mike Prysby; he doesn't trust anyone in MI government. He asked me for free drinking water lab analyses, which I was unable to provide. He only wants to speak with someone from EPA Headquarters.

Subject: RE: Briefing on Karegnondi Project/City of Flint

Just so everyone is on the same page:

Karegnondi Water Authority (KWA) has received a permit to construct an intake structure in Lake Huron from DEQ. If not already started, construction is planned for this fall.

I recall some discussion with Genesee County about using the raw water line to also provide water for agricultural purposes and possibly a utility in the area. Staff (Mike Prysby) is meeting with the county Wednesday to discuss big picture technical items on the project. We will be sure to remind the county at this meeting that the water withdrawal permit is restricted to drinking water use.

When we met with KWA and the city of Flint last spring, Flint had not yet decided whether to join the authority or not. We have not received word that a decision has been made. At one time, it appeared that DWSD would allow the city of Flint to blend DWSD water with Flint River and/or KWA drinking water; however we have heard third-hand that this may not be acceptable to DWSD. We have not seen anything in writing.

If we could quantify construction permitting for FY13, not just number of permits, but water main footage, tanks, wells, treatment facilities, it could help highlight our impact on economic development and the need for water service. If we also take into consideration our average permitting time, this would then also touch on our customer service effort.

We do good work.

One thing missing from the list below was Chuck's note that one of our accomplishments should be that no serious public health problems arose in the public water supply program in the past year. However, it is difficult to quantify "nothing bad happened."

Subject: RE: 2014 Communications planning: NEED YOUR HELP

ODWMA came up with a few suggestions:

Stormwater Asset Management & Wastewater (SAW) Program

DEQ was able to plan and develop the new SAW Grant & Loan Program. Enacting legislation was signed on January 2, 2013. Applications for funding were available in October 2013. SAW will award $97M in the first year.

Asset Management Training

Over 500 people attended Asset Management Training provided by the DEQ. The training was designed to provide relevant and timely information to drinking water and wastewater municipal systems.

The issuance of construction permits to the KWA for the installation of Lake Huron Intakes (south of Lexington) to provide water service to Genesee county and Flint.

Issue of construction permits to Bay County for the construction of a new WTP using the Saginaw-Midland Municipal Water System as a source (Lake Huron versus Saginaw Bay).

Successfully rolled out the new Stage II Disinfection By-Product Rule to District Systems, providing technical assistance in the form of draft sampling plans and personalized consultations to ensure that the new rule was implemented smoothly.

The Michigan Groundwater Management Tool (MGMT) is a software platform that was developed in a Joint Funding Agreement with Michigan State University. MGMT utilizes spatially compiled groundwater data and allows for the automated analysis of ground water flow. MGMT now allows us to provide delineations at no charge for the smaller community and non-community water systems. Most of these MGMT delineations closely parallel traditionally developed Wellhead Protection Areas (WHPA's), which cost an average $36,000. In fiscal year 2013, almost 1800 public water supplies had provisional delineations completed by the MGMT at no cost. The provisional delineations identify these WHPA's and are the first critical step in protecting drinking water sources.

A total of 2416 drinking water operators trained in DEQ or jointly sponsored training classes.

Subject: 2014 Communications planning: NEED YOUR HELP
Importance: High

Greetings, all. We're moving toward a great 2014, where we will be doing more strategic communication and impactful storytelling.

As we prepare the departmental communications plan, I need your input. The Director has tasked me with collecting 2013 Accomplishments from each of the divisions and districts.

I don't need a book. Half a dozen of your top accomplishments on the year would be very helpful. One liner with a few sentences.

I need these by Dec. 6, in preparation for an off-site planning meeting Dec. 9.

If you have questions, please get in touch with me directly. THANK YOU, and happy holidays.

Brad Wurfel

Communications Director

Subject: FW: Update on Site Visit Dates

Liane:

It appears that the director will be coming to the Bay City office in June and/or September. Last couple of times, he did not want to see anything related to drinking water. If he has changed his mind, we will have the new Bay County plant under construction. Also, we should have the KWA raw water pump station, located just south of the village of Lexington, under construction.

Subject: Update on Site Visit Dates

Dear District Coordinators:

Below is another proposed update for site visit dates in the coming months. Please review dates and let me know if you need a different date or if you want to swap with another district coordinator. I have also provided some extra dates if you need alternative dates. This has been tricky as other meetings keep popping up my way for consideration. Also, we may have other events/announcements/site visits per the different themes in the draft Communications Plan that Brad will review at Monday Morning's staff meeting. Mondays and Fridays were proposed as they are normally good days for legislators.

Kalamazoo - Fred, SW Michigan area on Wednesday, **Wednesday, April 9.** The Director will be in Cass, MI on April 8 and spending the night there.
Back up Date in case of Weather Conditions: **Friday, April 25**

Lansing - Mike, Monday, April 14, 9:00-5:30. Director can leave at 9:00 that morning.
Backup Date in case of Weather Conditions: Monday, May 12, starting at 9:00.

Jackson - Mitch, I have given you **Friday, May 2.**

SE MI - Andy, as you know we had to pull the March 12 afternoon for site visits. We may be doing another event that day afternoon instead. We will keep you posted.

SE MI – Andy, Friday, May 9. Does this work for you?
Also, Director will be in Livonia on Tuesday, June 10 for the Environmental Compliance Conference doing the welcome speech. We may be able to also do a couple of sites if it works out.
Also, I will be working with Rep. Talabi's office for a Detroit sites tour and will keep you posted on that date.

Grand Rapids, Heidi, Friday, May 16. Does this work for you?
Also, Director will be in GR on Thursday, June 5 for Environmental Compliance Conference doing the welcome speech. We may be able to also do a couple of sites if it works out.

Saginaw Bay Chris, Friday, June 6. Does this work for you?

Cadillac - Phil, per our conversation we are going with **Friday, June 20**, and then spend the night in Traverse City area and then Director travels to RAM Center on **Saturday, June 21** for MUCC Speech on Saturday, June 21.

Cadillac Phil, per our conversation, the Director has a speech at Boyne Mt the evening of **Thursday, June 26** then he can do site visits **on Friday, June 27**.

Gaylord - Phil, in addition, Director will be in the **Gaylord area on August 12**. He will want to visit with staff that day and I may arrange for him to stop at RRD's In Service Training on August 11 or 12.

UP - Steve, I have given you **July 30, 31, and August 1 for the UP**. Also, as you know the Director met with UP staff on **Friday, February 14**. As a heads up, we may need to slightly alter the UP dates but I need to talk with the Director further on this as an ECOS meeting has now popped up in Washington DC on July 31. Stay tune....

Extra Available Date: Monday, June 23, starting at 9:00
Extra Available Date: Monday, June 30, starting at 9:00
Note: I do have some Monday afternoons available on the days of SMT meetings. May need some of these for "events".

Other dates for the second time around:

Jackson – Mitch – Monday, July 21 – Does this work for you?

Lansing and/or Grand Rapids – Mike and Heidi – Monday, August 18, leaving Lansing at 9:00. Or Friday, August 22. Do one of these work for you?

Saginaw - Chris - Friday, September 26 or Monday, September 29. Do one of these work for you? I do not have very many Mondays or Fridays in September for the Director.

SE Michigan, Andy, Friday, October 10 – Does this work for you?

Back up date in case needed this fall:
Monday, October 13

Please note that I did not check your calendars tonight on some of these dates but I will work with you wherever we can. I hope that I gave all of you at least 2 opportunities. If not, please let me know. I will also work this week in getting these on the Outlook calendar.

I appreciate your patience as we work through this. We look forward to working with you. Sarah Howes and Brad Wurfel will be contacting you in the near future to start the arrangements. This will be an exciting year in Telling Our Story!

Thank you.

Subject: Site Visit Dates

Dear District Coordinators,

I know you are all anxious to get started with site visit dates. I have given some of you dates but others I am still working on. I hope to get you final dates very soon.

Phil, I left you a voice mail today. Will Friday, June 20 work for Northern MI? Director will stay over and then head to the RAM Center on June 21 to speak to MUCC at their annual meeting.

Phil, the Director has a speech at Boyne Mt the evening of June 26 and would like to do site visits on Friday, June 27. Can you make that work?

Phil, in addition, Director will be in the Gaylord area on August 12. He will want to visit with staff that day and I may arrange for him to stop at RRD's In Service Training on August 11 or 12.

Mitch, I have given you Friday, May 2. (In addition, possibly one site visit the afternoon of Feb. 28)

Steve, I have given you July 30, 31, and August 1 for the UP. Also, as you know the Director will be in the UP on Friday, February 14 and that day is all set.

Andy, I've given you half day on March 12 since the Director will be in Detroit. There will be other dates coming.

Others: I will be in touch soon; hopefully yet this week. I have not forgotten you. I have several dates on hold that I will be able to offer.

I will be out of the office tomorrow, Feb. 12.

Thank you for your patience.

Subject: FW: Discontinuation of Service

Mike,

I forwarded your question to Jon Bloemker. His response is shown below. He asked me to forward it to you. The bottom line is that there are no provisions in the SDWA or Administrative Rules that specifically authorize DEQ to require the City to continue water service. There is a more general provision in the Act that could be construed to grant us authority if we deemed the termination of water service to be a public health threat.

Bob London

Cc: Shekter Smith, Liane (DEQ)
Subject: RE: Discontinuation of Service

Bob:

There is nothing in Michigan Safe Drinking Water Act granting the DEQ the authority to mandate the city continue water service to the township. However, a liberal reading of §325.1015 (3) may be construed that the department may issue an emergency order with or without hearing to protect public health. If the situation degrades to the point where the city is about to turn the valve off to the township, the DEQ administration and/or politicians want to employ this clause or other legal remedies to protect public health. For the most part, the issues between the city and township are contractual and political disputes, which are best handled by the court system. A better solution would require both sides to be reasonable and reach a more equable temporary and preferably a permanent solution.

Please keep in mind the disputes between DWSD and the most of S.E. Michigan. Numerous threats were made by both sides. One of the tools used was the capacity assessment requirements. Even with the Flint and Genesee County dispute with DWSD, a temporary fix was reached between the county and Detroit. Unfortunately for the township, we would be asking them about their plans to provide a reliable source of water to their customers under our capacity development clauses.

I attempted to call Liane Shekter Smith yesterday about this issue and finally made contact a few minutes ago. She will bring our administration up to date.

Subject: Discontinuation of Service

Hi Bob

You are aware that the City of Alpena is involved in legal action against Alpena Township related to their refusal to pay the water and sewer rate increases. In the Township's Requests for Admissions, they assert that the City has voluntarily continued to provide water service to them even though they refuse to pay imposed rate increase. In the past we have had guidance from the MDEQ that water service cannot be discontinued to the Township as this would be a criminal offense. Please know that we would never advise the city to take such action which would clearly compromise public health.

The City Attorney has asked that I find out what statute or law gives the MDEQ the authority to take legal action against the City if service to Alpena Township was shut off. Any guidance that you could provide would be appreciated.

Thanks,

Mike Glowinski

Subject: Authority Materials

Good Evening Bill and Tom,

Bill, I understand that you spoke with Sue McCormick today. At her request, I am forwarding informational material related to the regional authority memorandum of understanding that was signed yesterday.

Attached are the following items discussed/reviewed at today's Board of Water Commissioners workshop.

1) Today's BOWC Workshop Presentation summarizing key points of the MOU

2) Executed Memorandum of Understanding (MOU) filed with Bankruptcy Court yesterday.

3) DRAFT articles which are being presented to City Council and County Commissions for consideration to effectuate the Authority.

Please note that the MOU became public yesterday. The presentation and articles were released today. The MOU should be considered a "framework" document. If the appropriate bodies approve the articles (by October 10th), the next step would be drafting a lease agreement.

Copied on this email is Eric Rothstein who has provided technical support and assistance to Judge Cox and Rich Baird during the county mediation process. As we may have mentioned, there was a "gag order" in effect for the participants of the mediation. As we move forward, Eric may also assist with developing a work plan to address the long list of issues triggered by the MOU.

Thank you,

Nickie

Mike Duggan, Mayor

Great Lakes Water Authority
Memorandum of Understanding

SEPTEMBER 10, 2014

DWSD MEDIATION PROCESS

- Initial Authority discussions failed
  - Based on "monetizing" DWSD assets / revenues to benefit of City of Detroit General Fund creditors
- April 2014 Judge Cox resumes DWSD mediation
- Agreement that lease payment will "stay in the system" for City of Detroit local system or Detroit share of common costs
- Finance Working Group determination of feasibility of $50 million "control premium" in form of lease payment
- Memorandum of Understanding / Articles of Incorporation drafted for execution by Principals of counties and City of Detroit
  - Pending affirmation by respective local government governing boards
  - Multi-track implementation planning process pending

MEMORANDUM OF UNDERSTANDING OUTLINE

- Governance
- Lease
- Key Financial Terms
- O&M of Detroit and Other Local Systems
- Capital Improvements
- Treatment of Existing Contracts
- Evaluation and Transitional/Transactional Costs
- Management of the System for Benefit of Customers
- Termination of Authority or Withdrawal from Membership
- Conditions Precedent to Transfer
- Statement Regarding State Commitments

GLWA GOVERNANCE

Macomb County	Oakland County	City of Detroit	Wayne County	State of Michigan
1 Voting Board Member	1 Voting Board Member	2 Voting Board Members	1 Voting Board Member	1* Voting Board Member

- **Board appointed to 4-year terms serving "at will"**
  - Minimum education and experience requirements; compensation determined by Board
- **Supermajority (5/6) voting requirements for:**
  - Appointment of General Manager
  - Approval of rates and rate-setting protocols
  - Issuance of debt
  - Annual approval of a rolling 5-Year CIP
  - Adoption of a procurement policy
  - Approval of a lease of the Systems
  - Removal of any Board member for cause.

GLWA LEASE & KEY FINANCIAL TERMS

Lease of DWSD Assets

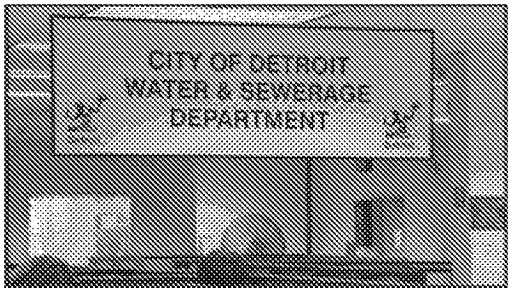
- $50 million per year payments a "common to all" revenue requirement
- Held in separate Authority fund used at City's discretion for:
  - Detroit local infrastructure improvements
  - Detroit share of common to all debt service or debt service for Detroit local improvement

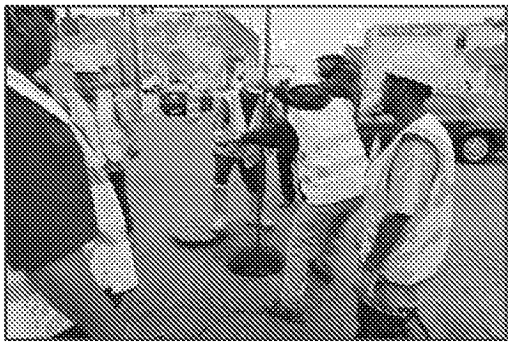
Key Financial Terms

- GLWA has no taxing power
- Incorporating municipalities / GLWA finances separate
- MFA available to Authority
- "Common to All" rate structure includes:
  - Lease payment ($50M)
  - $4.5M ratepayer assistance for all retail users in GLWA system
  - "Frozen" $26M recognitions of City ownership
- Open, transparent financial reporting
  - Pension liabilities limited per Bankruptcy, monitored
- **Assumes annual revenue requirement increases of no more than 4% for each system**

OPERATION AND MANAGEMENT OF DETROIT AND OTHER LOCAL SYSTEMS /

- City has right to continue to operate and retain employees for the local system in Detroit including to deliver
  - Capital improvements
  - Billing and collection system
  - City to implement water loss practices
- City may contract for selected operations & capital program delivery
  - With GLWA
  - With other service providers





CAPITAL IMPROVEMENTS / EXISTING CONTRACTS

Capital Improvements

- State agreement to facilitate access to State administered financing
- City of Detroit determines priorities for dispensing local system improvement funds

Existing Contracts

- The City will assign all customer (wholesale) contracts to GLWA
- GLWA a successor employer to DWSD. Collective Bargaining Agreements (CBAs) assured
- Existing DWSD vendor contracts assigned to GLWA

IMPLEMENTATION COSTS / MANAGEMENT OF THE REGIONAL SYSTEM

Implementation Costs

- State agrees to give priority consideration to a CGAP grant application to assist with payment of transactional costs
- Veolia to undertake Peer Review of System
  - No commitment to Veolia for contract operations
  - GLWA may adopt ideas or recommendations and may engage Veolia selectively

System Management

- GLWA to adopt regional perspective in water and sewer system management
  - Revise Master Planning
- Best efforts to optimize use of system capacities
  - Objective to become provider of choice in southeast Michigan
  - Consider incentives to utilize system capacities

TERMINATION, CONDITIONS PRECEDENT & STATE COMMITMENT

- **Termination**
  - Incorporating Municipalities may terminate but remain liable for all contractual obligations to GLWA. Governor appoints replacement member. City foregoes lease payment if it terminates.
- **Conditions Precedent to Transfer**
  - Incorporating Municipalities adopt MOU / Articles of Incorporation
  - GLWA and City have negotiated (1) lease agreement, (2) agreements relating to operation of Detroit local system and (3) transitional services agreement
  - GLWA and City of Detroit have secured necessary permits for systems
  - City receives approvals under PA 436 and Plan of Adjustment confirmed
  - *City receives bondholder and credit enhancer consent*
- **State Commitment**
  - Facilitate transaction, transfer of permits, and grant / loan funding

SUMMARY OF REVENUES AND REVENUE REQUIREMENTS *($ MILLIONS)* *

	2015	2016	2017	2018	2019

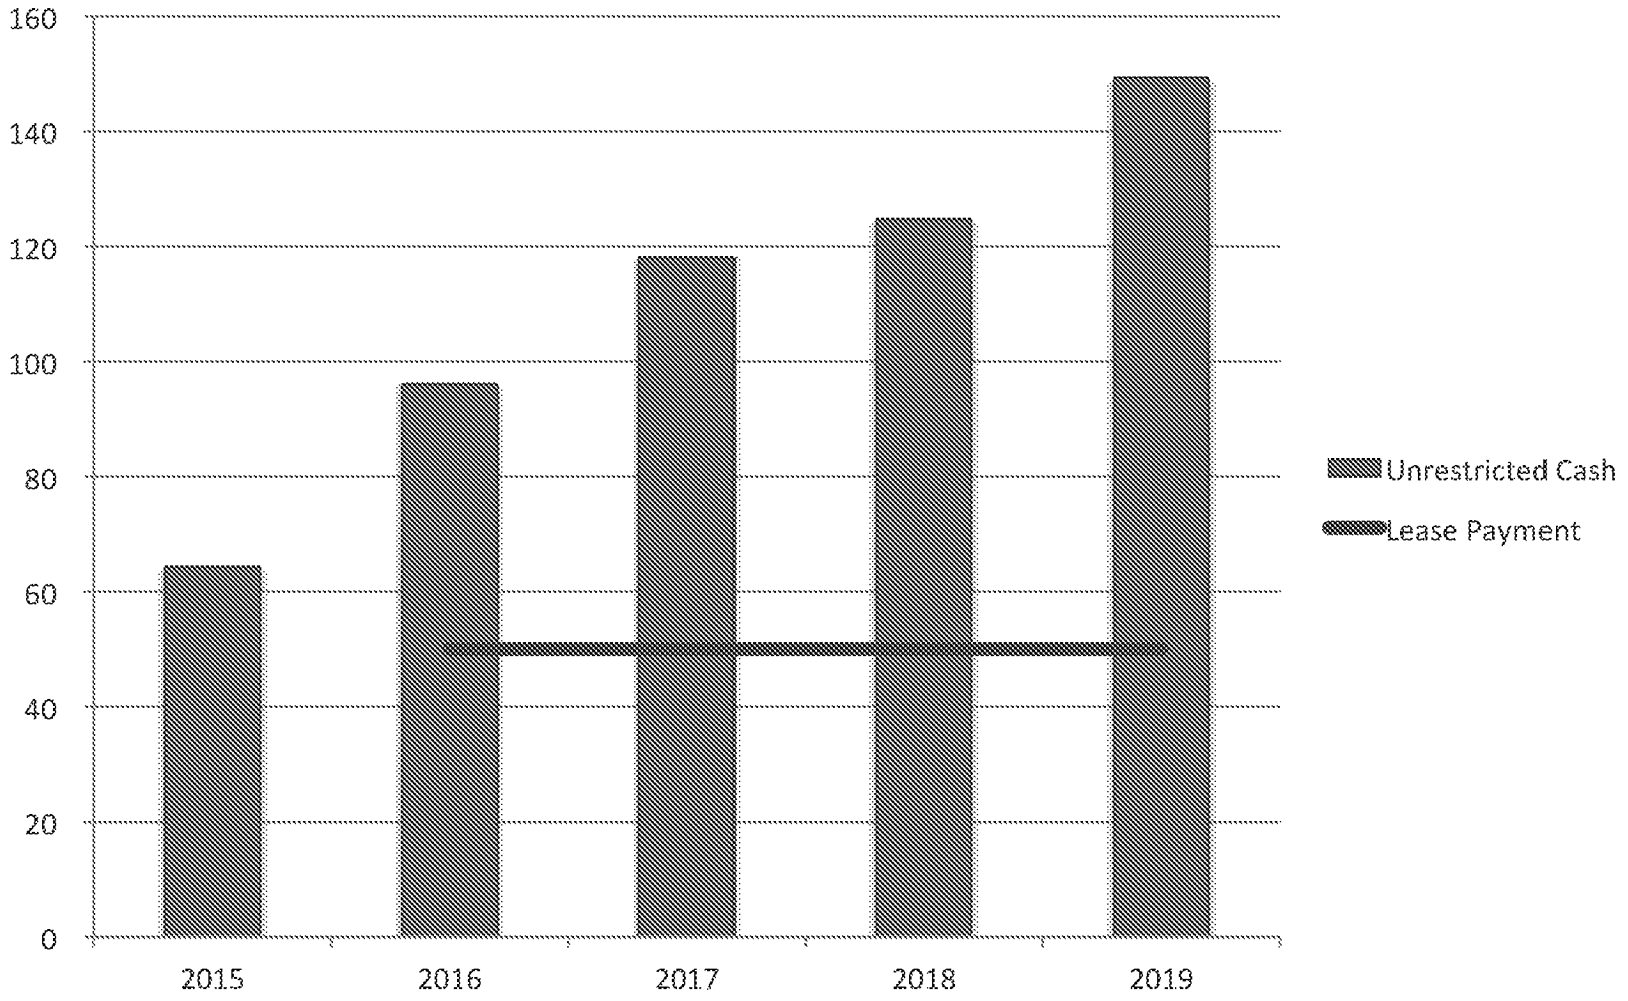
** All figures (prior to Lease Payment) reflect combined Water and Sewer figures as reflected in Series 2014 Bond Disclosure*

*** Note that the Lease Payment stays "within the System" and is used to fund capital improvements that would have been System revenue requirements in some form and at some point in time*

FORECASTED UNRESTRICTED CASH VS. LEASE PAYMENT *($ MILLIONS)* *



** Unrestricted Cash figures reflect combined Water and Sewer totals from Series 2014 Bond Disclosure*

SUMMARY & NEXT STEPS

UNITED STATES BANKRUPTCY COURT
EASTERN DISTRICT OF MICHIGAN
SOUTHERN DIVISION

In re	:	Chapter 9
CITY OF DETROIT, MICHIGAN,	:	Case No. 13-53846
Debtor.	:	Hon. Steven W. Rhodes

NOTICE OF EXECUTION OF FRAMEWORK FOR CREATING A WATER AND SEWER AUTHORITY

PLEASE TAKE NOTICE THAT:

1. On September 9, 2014, the City of Detroit (the "City");[1] the State of Michigan; the County of Oakland, Michigan; the County of Wayne, Michigan; and the County of Macomb, Michigan (collectively, the "Counties") entered into a Memorandum of Understanding Regarding the Formation of the Great Lakes Water Authority (the ("MOU"), which is attached hereto as Exhibit A. This is a framework for the creation of a regional water and sewer/stormwater authority to be called the Great Lakes Water Authority (the "GLWA"), pursuant to Act 233 of 1955 (Act 233), to operate, control and improve both the Water Supply

[1] Capitalized terms not otherwise defined herein have the meanings given to them in the Sixth Amended Plan for the Adjustment of Debts of the City of Detroit, dated August 20, 2014 [Docket No. 6908] (the "Plan").

and Sewage Disposal Systems owned by the City and presently operated by the Detroit Water and Sewerage Department ("DWSD").

2. The conditions precedent to the creation of the GLWA and the consummation of the transactions contemplated in the MOU include:

a. the negotiation and execution of definitive documentation;

b. the receipt of all governmental consents and approvals required for the transactions contemplated in the MOU;

c. the establishment of the GLWA and the adoption and approval or ratification of Articles of Incorporation for the GLWA;

d. the Board of the GLWA's adopting an ordinance or resolution addressing all matters for which an ordinance is required to permit the contemplated transaction and operation of the water and sewer systems by the GLWA;

e. the GLWA and the City's negotiating a lease, an agreement regarding the operation and management of the Detroit local system effective on the transfer date and an agreement relating to the provision of services on a transitional basis by the City to the GLWA;

f. the GLWA's securing all necessary permits and other approvals to operate the water and sewer systems;

g. the receipt by the City of all approvals required under PA 436 of 2012;

h. the City having a confirmed plan of adjustment that contemplates the creation of the Authority; and

i. the receipt by the City of the consent to the transfer of the water and sewer systems to the GLWA from the credit enhancers and a majority of the holders of DWSD bonds.

3. The contemplated GLWA transaction would constitute a Qualifying DWSD Transaction; however, if the GLWA is formed and the conditions set forth in paragraph 2 are satisfied, the City's General Fund will not receive any proceeds therefrom.

4. Upon execution of the MOU, the Counties have agreed that their objections to confirmation of the Plan are withdrawn with prejudice.

Dated: September 9, 2014

ATTORNEYS FOR THE CITY

EXHIBIT A

MEMORANDUM OF UNDERSTANDING
REGARDING THE FORMATION OF THE GREAT LAKES WATER AUTHORITY

The following memorandum of understanding (MOU) represents a framework for the establishment by the City of Detroit, Oakland County, Wayne County and Macomb County (each, an "Incorporating Municipality") of a regional water and sewer/stormwater authority to be called the Great Lakes Water Authority, pursuant to Act 233 of 1955 (Act 233), to operate, control, and improve both the Water Supply and Sewage Disposal Systems (Systems) owned by the City and presently operated by the Detroit Water and Sewerage Department (DWSD). This framework describes terms to be incorporated into articles of incorporation which shall be presented to the City and the legislative bodies of the Counties as soon as practicable, for approval or disapproval no later than October 10, 2014. The Authority shall be established upon adoption of the articles of incorporation by the City and the legislative body of at least one County, and the publication and filing of the articles of incorporation as provided in Act 233.

GOVERNANCE

The Board of the Authority shall be comprised of six voting members:

- Two members appointed by the Mayor of the City
- One member appointed by each County which adopts the articles of incorporation
- One member resident of a service area outside the territories of the three Counties appointed by the Governor

In the event that Wayne, Oakland or Macomb County does not adopt the articles of incorporation the Governor shall also appoint a Board member resident in the service area within that County. Board members shall have four year, staggered terms, with no more than two members' terms expiring in same year. Each Board member shall serve at the will of and may be removed by the appointing authority.

The Board shall act by simple majority vote, except that a supermajority (5/6) shall be required for:

- Appointment of the Authority's general manager/executive director
- Approval of rates, fees and charges and rate-setting protocols
- Issuance of debt, which shall be revenue-backed debt
- Approval of annual operating budget
- Annual approval of a rolling Five Year Capital Improvement Plan

- Adoption of a procurement policy, which will include the terms on which any aspect of the operations of either System may be privatized
- Approval of a Lease of the Systems from the City
- Removal of any Board member for cause.

All Board members shall possess minimum education and professional experience standards, to wit: at least seven years of experience in a regulated industry, a utility, engineering, finance, accounting or law.

Compensation of Board members shall be determined by a supermajority vote of the Authority Board, and shall be consistent with the practices for other large public utilities.

LEASE

The City shall lease the Systems (except the Detroit local system infrastructure) to the Authority for an initial term of 40 years, extendable to at least match the term of any outstanding bonds of the Authority. Consideration for the Lease shall be the $50 million common-to-all charge per year (not subject to further Board approval) to be held by the Authority in the funds described below and used at the City's direction and discretion to fund any or a combination of the following: Detroit local system infrastructure improvements, debt service associated with such improvements or the City's share of the cost of common-to-all improvements. The parties agree that no Lease shall be entered into if the payment in consideration for the Lease would cause the Systems to be unable to provide a reasonable level of service, satisfy its debt obligations and adhere to the rate structure set forth in the Plan of Adjustment. Initially, 45% of the charge shall be allocated to Water Supply System customers and 55% shall be allocated to Sewage Disposal System customers, such allocation to be subject to review and adjustment by the Board every three to five years consistent with the method of allocation of other common-to-all charges between the two Systems, provided, that no such adjustment shall reduce the availability of such revenues to pay debt service on bonds issued to finance Detroit local system improvements below the level in anticipation of which such bonds were issued.

KEY FINANCIAL TERMS

The Authority shall have no taxing power.

A financial obligation of the Authority shall be the financial obligation of the Authority only and not a financial obligation of an Incorporating Municipality or a constituent municipality except to the extent a municipality which is a wholesale customer may have liability in that capacity.

The State shall allow the Authority to use the Michigan Finance Authority to issue bonds on behalf of the Authority.

The Authority's common-to-all rate structure shall include:

- The $50 million annual charge to be deposited with the Authority and applied, at the City's direction and discretion, (i) in the case of funds to be used for pay-as-you-go Detroit local system improvements, in a separate subaccount within the Authority's Construction Fund or Extraordinary Repair and Replacement Reserve Fund, as appropriate, for the related System, to be dedicated to Detroit local system infrastructure improvements; and/or (ii) in the case of funds to be applied to the payment of debt service on Authority bonds (either debt service allocable to Detroit's share of the cost of common-to-all capital improvements or to bonds issued by the Authority to finance Detroit local system improvements) to the appropriate Debt Service Account.
- $4.5 million in 2014/15 and an amount equal to .5% of base budgeted operating revenues per year thereafter, for deposit to an independently-administered Water Residential Assistance Program fund to provide assistance to indigent residential customers throughout the Systems who agree to take appropriate actions to reduce consumption.

The existing recognitions of the City's ownership and system support in the water and sewer system rate structures (return on equity for water and per settlement for sewer) will be frozen and continue at $26.216 million per year [$20,700,000 as the rate of return for the water system and $5,516,000 pursuant to settlements for the sewer system] during the term of the Authority.

The transfer of the Systems to the Authority shall not cause impairment of tax treatment of outstanding DWSD bonds. New debt and refunding bonds shall be issued pursuant to the Revenue Bond Act (PA 94 of 1933) or other statutory authority.

The MOU is predicated in part upon the assumption that the Bankruptcy Court will approve the terms of the City's Sixth Amended Plan of Adjustment (as it may be modified, supplemented or amended) (the "Plan of Adjustment") allocating liability to DWSD for funding the City's frozen General Retirement System (GRS) pension plan (the Pension Liability) and the City's settlement of claims associated with the swaps for its Pension Obligation Certificates, and for payments relating to debt service on DWSD's allocated share of liability on the New B Notes attributable to the GRS VEBA and Pension Obligation Certificates. The financial analysis

undertaken by the parties assumes that the Authority will issue bonds to prepay its Pension Liability or identify other savings should such financing prove to be infeasible and the Pension Liability is paid over the schedule provided in the Plan. Within 90 days after the establishment of the Authority, the Authority, working with the City and the Investment Committee of the GRS (Investment Committee) shall develop a process to reach agreement on the dollar amount which the Authority would need to deposit with the GRS as a one-time payment in lieu of the Pension Liability payments payable at the rate of $42.9 million per year (not including $2.5 million in annual administrative expenses or the one-time restructuring cost payment of $20 million in 2014/15) over nine years pursuant to the Plan of Adjustment. Notwithstanding the foregoing, nothing in this MOU modifies, or purports to modify, the obligations of DWSD as set forth in the Plan of Adjustment, and the Authority shall assume and comply with such obligations.

The Investment Committee established for the GRS pursuant to Section 13g of the Public Employee Retirement System Investment Act (MCL 38.1133g) (PERSIA) is obligated to receive and approve summary annual report, a public document prepared pursuant to Section 13(3) of PERSIA. It is the expectation of the parties that the Investment Committee will provide the Authority with a copy of each summary annual report prior to the formal approval of such report. The parties understand that the summary annual report will continue to (a) track DWSD retirees, deferred retirees, and active vested members, pension benefits paid and actuarial accrued liabilities separately from other GRS members and (b) shall allocate to the DWSD/Authority an undivided interest in GRS administrative expenses and in each investment and class of investment in the GRS, to enable the Authority to verify the appropriateness of allocations to the Authority. For each fiscal year commencing from and after July 1, 2023, on its normal schedule for determining the current fiscal year's contributions to GRS, GRS shall determine whether DWSD's/Authority's unfunded accrued actuarial liability on a market value of assets basis for its component of the frozen GRS plan ("DWSD GRS Component II UAAL") is fully funded at 100%. If DWSD GRS Component II UAAL is funded at 100% or more, no contributions for the current fiscal year will be required from the Authority. If DWSD GRS Component II UAAL is less than 100% funded, then the Authority shall make such level annual contributions to GRS as necessary to amortize such shortfall over 5 years at an interest rate equal to the then current GRS investment return assumption.

Each System, as a whole, is assumed to experience revenue requirement increases of not more than 4% for each of the first ten years under Authority management. The rates and

percentage increases for different customers may vary in order to meet their specific revenue requirements.

The Authority shall commit to and adopt reporting practices which provide transparency in system operations and management. By Fiscal Year 2017 the Authority shall adopt a two year operating budget.

The City and each wholesale customer shall retain complete responsibility for all obligations associated with their individual revenue requirements.

The Authority shall make every effort to employ individuals and contract with vendors from throughout the service areas.

OPERATION AND MANAGEMENT OF DETROIT AND OTHER LOCAL SYSTEMS

The City shall have the right to continue to operate and retain employees to operate, maintain, repair and improve the local system in Detroit, including capital improvements and repairs, and billing and collection services and any other services or may contract with the Authority or another third party for all or a portion of those or other functions. The City shall continue to develop the capital improvement program for the Detroit local system infrastructure and may elect to administer the maintenance and improvements to that system, and in any event, will direct the expenditure of the funds dedicated for those purposes. Billing and collection shall be managed such that the statutory lien on net revenues created by the Revenue Bond Act applies to payments received by the Authority or its trustee from Detroit local system customers and the Authority will have the power to enforce the collection of such payments. The Authority will finance Detroit local system improvements through the issuance of Authority bonds under the Revenue Bond Act, with the debt service to be allocated solely to Detroit local system ratepayers. City local rates may fund the Rate Stabilization Fund, contemplated by prior rate settlement agreements but as yet unfunded, from a portion of improved local collections until the accumulated balance is sufficient to stabilize rates and reduce delinquencies. The City will adopt metering or other practical methods of measuring water loss in the Detroit local system.

The Authority may provide services and issue bonds to finance improvements for other local systems within its service areas on the same basis.

CAPITAL IMPROVEMENTS

The State agrees to identify ways to facilitate access and eligibility for the Authority to the Clean Water State Revolving Fund and Drinking Water State Revolving Fund (collectively, SRF), grants and other sources of State funding to mitigate the cost of improvements for the

Systems and local system improvements, particularly for the areas of greatest health and environmental need, and commits to using its best efforts to facilitate such funding for the Authority. The City will determine priorities for capital improvements to the Detroit local system.

TREATMENT OF EXISTING CONTRACTS

Unless otherwise agreed by the parties, the City will assign all customer contracts to the Authority, which shall assume the same.

The Authority shall be a successor employer to DWSD for those employees transferring to the Authority, and will assume and honor DWSD's collective bargaining agreements for those employees.

Existing DWSD vendor contracts shall be assigned to and assumed by the Authority.

EVALUATION AND TRANSITIONAL/TRANSACTIONAL COSTS

The State's Competitive Grant Assistance Program (CGAP) provides incentive-based grants to stimulate smaller, more efficient government and encourage mergers, consolidations, and cooperation between two or more qualified jurisdictions. The program is focused on stimulating projects between two or more qualified jurisdictions that are creating new mergers, consolidations, and/or cooperative efforts/collaborations of existing services.

The State agrees to give priority consideration to a grant from any of the parties to this MOU to assist with payment of transactional costs associated with establishing and transferring the Systems to the Authority.

The City shall retain Veolia to undertake an assessment of the Systems and make recommendations to assist the parties in evaluating operating models, capital requirements and savings opportunities, with no commitment by DWSD, the City or the Authority to enter into a contract with Veolia to operate, manage or maintain the Systems. The Authority will be free to adopt ideas generated by such assessment and recommendations without any further obligation to Veolia. In the event the Authority is formed and a CGAP grant is received, sufficient of such funds shall be used to reimburse the City for the cost of the Veolia assessment.

MANAGEMENT OF THE SYSTEMS FOR BENEFIT OF CUSTOMERS

It is the parties' expectation that the Authority will use its best efforts to manage the Systems for the benefit of all Authority customers. Upon commencement of operations the Authority will review and revise as necessary the DWSD water and wastewater Master Plans. In reviewing those plans the Authority will use its best efforts to optimize the capacity of the water supply system and optimize and maximize the capacity of the wastewater system to treat flow so that operational economies of scale may be realized. The Board will take into account

the needs of the region in planning and operating the water and wastewater systems and will strive to become the provider of choice for southeastern Michigan and consider incentives for customers to utilize the system for their water supply needs and wastewater flow.

TERMINATION OF AUTHORITY OR WITHDRAWAL FROM MEMBERSHIP

Any withdrawing Incorporating Municipality shall remain liable for any contractual obligations it has to the Authority. Upon withdrawal of an Incorporating Municipality, the Governor shall thereafter appoint the member of the Board previously appointed by the withdrawing Incorporating Municipality; such member shall be a resident of the service area previously represented by the withdrawing Incorporating Municipality.

The City will forego its consideration for the Lease if it withdraws from the Authority.

CONDITIONS PRECEDENT TO TRANSFER

This MOU is subject to the negotiation and execution of definitive documentation and the receipt of all required consents and approvals required for the transactions contemplated herein, including, but not limited to, the following:

The Incorporating Municipalities shall have established the Authority and the Board will have adopted an ordinance or resolution addressing all matters for which an ordinance is required to permit the contemplated transaction and operation of the Systems by the Authority.

The Authority and the City shall have negotiated a Lease, an agreement regarding the operation and management of the Detroit local system effective on the transfer date, and an agreement relating to the provision of services on a transitional basis by the City to the Authority.

The Authority shall have secured all necessary permits and other approvals to operate the Systems.

The City will have received approvals required under PA 436 of 2012 and will have a confirmed plan of adjustment that contemplates the creation of the Authority.

The City shall have secured the consent to the transfer of the Systems to a regional authority from the credit enhancers and a majority of the holders of DWSD bonds.

Tender Financing and Creditor Settlement Terms regarding Transfer

The Authority shall, in connection with its assumption of or substitution for outstanding DWSD bonds, covenant to:

- maintain compliance with DWSD's three-part combined coverage requirements of 1.20, 1.10 and 1.00 for senior lien, second lien, and SRF junior lien

indebtedness, respectively, for both additional bonds test and rate covenant purposes; and

- maintain, pursuant to such ordinances or indentures, a flow of funds consistent with Act 94, in the following order of priority required by Act 94: (x) operation and maintenance expenses of the related System, and (y) debt service on all bonds payable from net revenues of the related System before making deposits to other accounts in the flow of funds; and
- comply with the provisions of the Bankruptcy Court Order dated August 25, 2014 approving the DWSD tender and new money financing, including but not limited to paragraph 24 thereof [requiring the method of making the pension payments to the frozen defined GRS plan].

The Authority shall also have(I) received (a) an opinion of nationally recognized bond counsel to the effect that the transfer of the Systems to the Authority and assumption of the outstanding DWSD bonds, in and of themselves, will not materially impair the tax-exempt status of the interest on such bonds; and (b) confirmation from one or more nationally recognized rating agencies that the bonds, after assumption or substitution by the Authority are rated not less than the then-current rating on the bonds; (II) demonstrated the ability of each System, under the additional bonds test described above, to issue at least One Dollar of additional indebtedness at each level of priority; and (III) provide in the Lease or other relevant agreement that any lease or other payment by the Authority to the City's general fund or other fund at the City (other than payments for customary services historically provided by the City to DWSD that constitute operation and maintenance expenses under the related DWSD Ordinance and payments in respect of pension obligations to be paid as operation and maintenance expense consistent with the Bankruptcy Court Order referred to above) shall be subordinated to all payments on the DWSD bonds assumed by the Authority.

STATEMENT REGARDING STATE COMMITMENTS

In agreeing to the terms of this MOU, the Representatives understand that the State will undertake all efforts, subject to all legal requirements, to facilitate the transaction as relates to consideration of permit matters (including a transfer of the current NPDES permit and associated Administrative Consent Order without material change to existing requirements), and applications for grant or loan funding. The State agrees to make such efforts.

PLAN OBJECTIONS

Upon execution of the MOU the Counties represented by the signatories to this MOU which have filed objections to the Plan of Adjustment shall each immediately withdraw with prejudice their objections to the Confirmation of the Plan of Adjustment.

Hey Guys,

Attached are documents pertaining to the upcoming Advisory Board meeting on 1/12/11 at 9:30 AM. This meeting is a 2 part meeting. The morning will consist of a joint Board meeting with the WW and DW Boards. We'll break for lunch, and continue in the afternoon with the DW meeting which will cover course reviews for approval and the identified items. There may be some additions to the agenda between now and the 12th. The meeting is in Constitution Hall in the Art Iverson room on 3 south. We do have our re-appointment and new appointment letters in place and are good to go.

With Eric gone I've taken the initiative to lead the meeting where appropriate. Dan, Bob, and Laura will also be in attendance and have items to add as well. If you have any questions, or items you would like to add, feel free to contact me.

SUBJECT: Joint Advisory Board Meeting
9:30 AM, January 12, 2011
Constitution Hall
525 W. Allegan, Lansing

Below is the agenda for the joint meeting of these Boards to discuss several items we have in common. The joint meeting will start at 9:30 AM and run through lunch. After lunch, we will split up so that each Board will have time to review course approvals and discuss other items, as necessary. Please remember to bring your parking ticket so we can validate your parking. If you have additional agenda items, or will be unable to attend this meeting, please notify me at tomlinsonm@michigan.gov or at 517-241-8913

1. Overview of joint meeting; logistics and introductions
2. OTCU staff changes/retirements, DNRE split
3. Guidance on Continuing Education Training Course Approvals(attached)
4. Definitions for technical, managerial and other courses (attached)
5. First Aid/CPR courses not eligible for CECs, sunset date 12/31/11 for remaining courses not expiring 12/31/10 (Tomlinson)
6. Course category association DW vs. WW (Tomlinson)
7. 360Water appeal of course suspension (Tomlinson)
8. Time permitting, any other topics of joint interest (All)

Following lunch, we will conclude joint meeting and continue with the Drinking Water Board meeting.

Drinking Water Advisory Board Afternoon Agenda

1. Nomination (or re-nomination) of ABE Chair
2. Approval of minutes from the October 29, 2010 meeting (ABE Chair)
3. Status of Advisory Board re-appointments (Tomlinson)
4. Discussion on Technical, Managerial & Other course determinations (Tomlinson)
5. Draft document - Guidance on Continuing Education Training Course Approvals
6. Review of pending CEC applications (Tomlinson)
7. Revised CECs for "3-day" courses, agenda modification/ internal policy - update (Chuhran)
8. Exam supplemental document discussion (Chuhran
9. Future meeting dates – April 28, 2011 and October 21, 2011

DEQ BOARD(S) OF EXAMINERS/CERTIFICATION POLICY ON CONFLICTS OF INTEREST

The DEQ recognizes that members of a Board of Examiners/Certification (Board) are made up of individuals that may potentially have a Conflict of Interest with a particular issue or policy that comes before the Board. Such **potential conflicts** may include, but are not limited to the following:

1. When the Board Member or a Family Member has a direct financial interest in whether or not a training program is approved for continuing education credit.

2. When the Board Member or a Family Member would directly and uniquely benefit from the issue or policy being considered.

3. When the Board Member's employer, employee or co-worker would directly and uniquely benefit from the issue or policy being considered.

4. When the Board Member is representing a business, organization, association, etc. that would directly and uniquely benefit from the issue or policy being considered.

EXPECTATIONS

- Prior to Board action on a training program, issue or policy, a Board Member believing they may have a Conflict of Interest and who is in attendance at the meeting shall disclose all facts material to the potential Conflict of Interest. Such disclosure shall be reflected in the minutes of the meeting.

- A Board Member who has a Conflict of Interest shall not participate in the Board's discussion of the matter except to disclose material facts and to respond to questions. Such person shall not attempt to exert his or her personal influence with respect to the matter, either at or outside the meeting and will be treated as any non-board member present at the meeting.

- A Board Member who has a Conflict of Interest with respect to a training program, issue or policy that will be voted on at a meeting shall not be counted in determining the presence of a quorum for purposes of the vote. The person having a Conflict of Interest shall not vote on the training program, issue or policy and may choose to not be present in the meeting room when the vote is taken. Such person's ineligibility to vote shall be reflected in the minutes of the meeting.

DEFINITIONS

Conflict of Interest - is any circumstance described by or similar to examples 1-4 on this page.

Board Member - is any person serving as a member of the Drinking Water Advisory Board of Examiners, the Municipal Wastewater Board of Certification and/or the Industrial Wastewater Board of Examiners.

Family Member – includes, but is not limited to a spouse, domestic partner, parent, child or spouse of a child, brother, sister, or spouse of a brother or sister of a Board Member.

Approved: 12/10/08 - Industrial WW Board; 01/14/09 - Municipal WW Board; 04/24/09 – Drinking Water Board

GUIDANCE ON CONTINUING EDUCATION
TRAINING COURSE CATEGORIES

To be approved, an Education and Training Program must relate to the duties, responsibilities, operation, maintenance or supervision of a drinking water system, a sewerage system or both. The Advisory Board of Examiners (for Drinking Water) and the Board of Certification (for Wastewater) each evaluate and either approves or disapproves continuing education training and determines the continuing education training hour value. Some courses that have applicability across a broad range of industries may not be approved for continuing education credit. Each Board categorizes approved training as "Technical", "Managerial" or "Other". The following definitions and examples of training courses and program subjects provide guidance regarding these categories:

- **Technical**: Training that relates to skills and knowledge of the science, engineering or specific applications of operation and/or maintenance of a system. Technical training may include, but is not limited to applied math, applied hydraulics, chemistry; the installation, maintenance and repair of system components; process control, electricity and electrical maintenance; SCADA and control systems.
- **Managerial**: Training in the skills and knowledge relevant to the supervision or administration of a system. Managerial training may include, but is not limited to public relations, employee relations, organizational skills, budgeting and rate setting, asset management, risk assessment and management, written and verbal communications, regulation and reporting requirements.
- **Other**: Certain important and beneficial courses are not determined to be technical or managerial. Such training may include, but is not limited to computer applications, safety, exhibits and trade shows, organizational memberships, and training events with a changing agenda that are not specifically technical or managerial in nature.

Many employers/utilities offer on-the-job training so that employees will perform satisfactorily, as required by the job position. Training programs deemed to be on-the-job training will not be approved for continuing education credits.

Approved: 04/23/10 – Drinking Water Board; Approved: 04/30/10 – Municipal Wastewater Board

Importance: High

Liane,

The attached document is the collaborative effort of the Region 5 States to develop a single set of comments on the proposed revisions to the Total Coliform Rule. Richard Overmyer, Brock Howard and I participated in a number of conference calls and email dialogues to arrive at this final draft. Rich Overmyer had the most input, but Brock and I agree with the final comments.

The intent is to have all of the State Drinking Water Administrators sign the document. Currently, they listed my name because they didn't know who else to list, but I think it should be your signature block. If you agree, can we provide an electronic signature block and Michigan DNRE logo for this letter to EPA?

Once I have your answer, I will reply to Minnesota and answer the other questions. If you have questions or want to meet to discuss further, let me know.

Richard

Subject: FInal draft DW Administrators letter to EPA
Importance: High

Good morning all

Attached is the final draft (yeah and a toss of confetti). The letter still needs formatting and that task has been given to our support staff. The track change is still on in case there are still changes to be made. Can everyone please send me their signature block. If you have already done so can you please resend as a couple of my archive email files were lost and I have someone trying to recover them. It will be faster if you resend the signature block.

Do we want the letter to go out with out a letterhead? One option would be to paste the logo from each state at the top of the letter.

Do the directors want to route the letter for signature or use electronic signatures?

Are we okay to send an advance copy of the letter to Region 5?

Thanks

Jerry

Happy New everyone

I have changed the letter to incorporate Beth's comment in paragraph 3.

Regarding the Section 2 comment, I need to defer to Jill and Lee as this was language from their December 15 and 16 email attachments. I am good with dropping from the second bullet "What is needed is a compliance response path for total coliform positives that focuses on GWR responses for the initial confirmed total coliform positive and has an escalated response for additional confirmed total coliform positive results" Jill/Lee are you okay with dropping this sentence? If not can you please address Beth/Mike's questions.

I suggest keeping "state actions" in the first bullet under Section 2.

I had not thought about this until Jill sent me her electronic signature, I am wondering do all the drinking water administrators want to sign the letter electronically or route the letter and sign?

If there are no further comments I will send the final draft to everyone Wednesday for one last review and okay.

Thanks

Jerry

Subject: RE: Recap - MI Comments

Hey All,
Mike is out this week, but I got his input on this via email and I've combined our comments. The comments are tracked in the attached. The first comment in paragraph 3 is pretty straightforward.

The other comments are in Section #2. We weren't sure what it was trying to say. I think if you remove the sentences, it still gets the point across. Also in the first bullet under #2, we don't think it needs to refer to state actions again since it's in the above paragraph.

All,

Yes, thanks to everyone for their work on this especially Jerry & Beth. Pat's last draft to Mikes revision looks good. Just note we should be consistent in the "1000 or less" population cutoff (eliminate the "less than 1000"). Also the 3rd bullet under item 4 should be: Maintain baseline monitoring as quarterly for all *groundwater systems serving 1000 or less.* (Not all pws).

1. Is this a draft that we can now share with the Region? YES

2. Is this proposal all or nothing? What happens if US EPA is okay with the simplified monitoring process but does not consider dropping the monitoring and reporting from clean compliance history? NO, NOT ALL OR NOTHING BEING ABLE TO KEEP OUR FIND & FIX PROCESS IS VERY IMPORTANT. HOWEVER, MI ESTIMATES A 60-70% VIOLATION RATE IF MONTHLY MONITORING STAYS IN AS PROPOSED. I SUSPECT THAT WOULD MEAN MASS REFERRALS TO EPA FOR ENFORCEMENT OF MOST M&R VIOLATIONS.

3. By using "significant deficiency" as part of reduced monitoring are we saying it is not necessary to define "sanitary defect"? WE DON'T NEED ANOTHER DEFINITION.

4. Is it okay to drop the following in #2? "Failure to follow Ground Water Rule would trigger a RTCR Level 1 Assessment. A second Level 1 trigger within a rolling 12-month period would trigger Level 1 Assessment and a third Level1 trigger would require a Level 2 assessment" If not, I need clarification of what is meant by failure to follow GWR? MIKES VERSION WORKS.

5. Do we need to provide comments or proposed definition of season system, clean compliance history, sanitary defect? NO, NOT AT THIS STAGE. LET'S NOT MAKE THIS OVERLY DETAILED.

6. Is it possible to open up the reduced monitoring to NTNCWS as well as TNCWS? The reason I ask is based on my conversation last week with Miguel. In this case we may be able to get a little more. It is still possible that through the rule negotiations that we may need settle for only transient noncommunity systems. Miguel just needs to know our initial and fall back positions. MI HAS ALMOST 1500 NT'S BUT IT IS DIFFICULT FOR US TO ARGUE VERY CONVINCINGLY TO JUSTIFY ANNUAL COLIFORM MONITORING FOR THEM. WE UNDERSTAND IT'S A LITTLE DIFFERENT FOR MN'S PROGRAM THAT IS SET UP BASED ON ANNUAL SITE VISITS & MONITORING FOR THE SYSTEMS. OUR TAKE ON THIS IS MONTHLY MONITORING IS NOT AN EFFICIENT USE OF SCARCE PUBLIC HEALTH RESOURCES. IF WE NEED TO CONCEDE ANNUAL MONITORING FOR NT'S TO MAKE MONTHLY FOR EVERYONE GO AWAY, WE SHOULD. PUTTING IT ON THE TABLE NOW AND BEING FIRM ON IT WOULD BE MI'S VOTE.

Happy New Year!

To: Benzie, Richard (DEQ)
Subject: WWN
Attachments: 3 Benzie - 2011 Needs Survey.doc

I told Randy we could maybe get another page or so, but not 3 or 4. He said to send along what we could anyway and he will try to fill the rest. Here is your previous Needs Survey article. If you could modify and send it back, that would be great.

Michigan Systems Selected for 2011 Needs Survey

By Richard Benzie, MDNRE

EPA is required by the Safe Drinking Water Act (SDWA) to conduct a survey of drinking water infrastructure needs every four years. The purpose of this survey is to capture the 20-year capital investment needs of public water systems eligible to receive Drinking Water State Revolving Fund (DWSRF) assistance. Below is the list of 63 Michigan systems that have been selected to participate in the 2011 Needs Survey.

Algonac	Huron Regional WA	Richmond
Ann Arbor	Ionia	Riverview
Bad Axe	Kalamazoo	Romulus
Birch Run	Kinross Twp	Saginaw
Brownstown Twp	Lansing	Saginaw-Midland WS
Buena Vista Twp	Macomb Twp	Sault Ste Marie
Clinton Twp	Madison Twp	Shelby Twp
Dearborn	Marquette	South Haven
Detroit	Midland	SOCWA
ELMWSA	Monroe So County	St Clair Shores
Eaton Rapids	Mount Clemens	St Clair WSA
Escanaba	Mount Pleasant	St Joseph
Flat Rock	Muskegon	Sterling Heights
Flint	Muskegon Heights	Taylor
Fort Gratiot Twp	MI-American WC	Union Twp
Frankenmuth	Northville Twp	Warren
Genesee Co	Norton Shores	Waterford Twp
Grand Ledge	Oak Park	Williamston
Grand Rapids	Oxford Twp	Woodhaven
Grosse Pt Park	Plymouth Twp	Wyoming
Hampton Twp	Port Huron	Ypsilanti CUA

EPA will use Federal Express to deliver the survey questionnaires to these systems in early 2011. It is important they be completed so Michigan obtains its fair share of the DWSRF appropriation. MDNRE is planning to conduct one or more workshops for participating systems in March of 2011 to assist in completing these surveys. If you have any questions, contact your district representative or Richard Benzie at benzier@michigan.gov .

Subject: RE: FInal draft DW Administrators letter to EPA

Jerry,

Thanks again for pulling this final together. Indiana is OK with sending this version. I have one suggestion for the last paragraph: should we put in a contact in case EPA wants clarification of one or more of our points? Since I bought it up, I'll volunteer to be a contact and would work with all of you to answer any question EPA may have. I'm also open on this and will go along with what we all decide on a inserting a contact.

I'm OK either way on letterhead: blank or the collective logos. I'll send our logo if we decide to go that way.

I'd vote for some sort of electronic signature, but will go along with what the group decides.

As soon as we all approve of the final, we should give it to Region 5

My signature block is:

Patrick Carroll, Chief
Drinking Water Branch
Office of Water Quality

Subject: FInal draft DW Administrators letter to EPA
Importance: High

Good morning all

Attached is the final draft (yeah and a toss of confetti). The letter still needs formatting and that task has been given to our support staff. The track change is still on in case there are still changes to be made. Can everyone please send me their signature block. If you have already done so can you please resend as a couple of my archive email files were lost and I have someone trying to recover them. It will be faster if you resend the signature block.

Do we want the letter to go out with out a letterhead? One option would be to paste the logo from each state at the top of the letter.

Do the directors want to route the letter for signature or use electronic signatures?

Are we okay to send an advance copy of the letter to Region 5?

Thanks

Jerry

Happy New everyone

I have changed the letter to incorporate Beth's comment in paragraph 3.

Regarding the Section 2 comment, I need to defer to Jill and Lee as this was language from their December 15 and 16 email attachments. I am good with dropping from the second bullet "What is needed is a compliance response path for total coliform positives that focuses on GWR responses for the initial confirmed total coliform positive and has an escalated response for additional confirmed total coliform positive results" Jill/Lee are you okay with dropping this sentence? If not can you please address Beth/Mike's questions.

I suggest keeping "state actions" in the first bullet under Section 2.

I had not thought about this until Jill sent me her electronic signature, I am wondering do all the drinking water administrators want to sign the letter electronically or route the letter and sign?

If there are no further comments I will send the final draft to everyone Wednesday for one last review and okay.

Thanks

Jerry

Hello all

The document has been revised to address the consistency issues of the acronyms. We will go without the letterhead as there are states where the logo may be changing. In the final document we will try to have all of the signatures on a single page. Please review your signature block to make sure it is correct. (I just want to make sure something has not been lost in the cut and paste). The final paragraph has been edited to include a contact for the Region 5 states. There is general agreement that the letter can now be sent to Region 5 staff. If I hear no objections I will send a copy of the draft (minus signatures) to Miguel Wednesday.

When you send me your signature block I will use this as your stamp of approval the document is ready to sign. I have a signature block from Illinois.

Two additional questions

1 Do we want to request a meeting with Tom Grubbs to further discuss these issues? We did make that request when a common letter signed by all Region 5 State's was sent for the proposed GWR. This resulted US EPA holding a two day meeting in DC to discuss the States issues. Almost all states had representation at the meeting.

2. Do we brief ASDWA on our request? If so when? The March ASDWA meeting (general session and Board meeting) will be a good time to get everyone at the table.

Thanks

Jerry

Morning All,

I originally replied only to Jerry so thought I should share my thoughts. I suggested we clean up the acronym "stuff" so it was consistent throughout the document.

Other comments:

I support having a contact (and it being Pat----Thanks).

Electronic signature (pdf) is okay with me.

We also have a letterhead change going on---so I'm in the same boat as Mike on that one.

Once we finalize---okay to give it to the Region.

I agree having a contact is a good idea and thanks Pat for volunteering.

Clarification, are we using electronic signatures or are we circulating the letter. Electronic signatures (i.e. pdf) would clearly be quicker.

It is a little tough to provide the Ohio EPA letterhead right now as we are changing Governor and Director over the weekend.

Mike

All,

Yes, thanks to everyone for their work on this especially Jerry & Beth. Pat's last draft to Mikes revision looks good. Just note we should be consistent in the "1000 or less" population cutoff (eliminate the "less than 1000"). Also the 3rd bullet under item 4 should be: Maintain baseline monitoring as quarterly for all *groundwater systems serving 1000 or less.* (Not all pws).

1. Is this a draft that we can now share with the Region? YES
2. Is this proposal all or nothing? What happens if US EPA is okay with the simplified monitoring process but does not consider dropping the monitoring and reporting from clean compliance history? NO, NOT ALL OR NOTHING BEING ABLE TO KEEP OUR FIND & FIX PROCESS IS VERY IMPORTANT. HOWEVER, MI ESTIMATES A 60-70% VIOLATION RATE IF MONTHLY MONITORING STAYS IN AS PROPOSED. I SUSPECT THAT WOULD MEAN MASS REFERRALS TO EPA FOR ENFORCEMENT OF MOST M&R VIOLATIONS.
3. By using "significant deficiency" as part of reduced monitoring are we saying it is not necessary to define "sanitary defect"? WE DON'T NEED ANOTHER DEFINITION.
4. Is it okay to drop the following in #2? "Failure to follow Ground Water Rule would trigger a RTCR Level 1 Assessment. A second Level 1 trigger within a rolling 12-month period would trigger Level 1 Assessment and a third Level1 trigger would require a Level 2 assessment" If not, I need clarification of what is meant by failure to follow GWR? MIKES VERSION WORKS.
5. Do we need to provide comments or proposed definition of season system, clean compliance history, sanitary defect? NO, NOT AT THIS STAGE. LET'S NOT MAKE THIS OVERLY DETAILED.
6. Is it possible to open up the reduced monitoring to NTNCWS as well as TNCWS? The reason I ask is based on my conversation last week with Miguel. In this case we may be able to get a little more. It is still possible that through the rule negotiations that we may need settle for only transient noncommunity systems. Miguel just needs to know our initial and fall back positions. MI HAS ALMOST 1500 NT'S BUT IT IS DIFFICULT FOR US TO ARGUE VERY CONVINCINGLY TO JUSTIFY ANNUAL COLIFORM MONITORING FOR THEM. WE UNDERSTAND IT'S A LITTLE DIFFERENT FOR MN'S PROGRAM THAT IS SET UP BASED ON ANNUAL SITE VISITS & MONITORING FOR THE SYSTEMS. OUR TAKE ON THIS IS MONTHLY MONITORING IS NOT AN EFFICIENT USE OF SCARCE PUBLIC HEALTH RESOURCES. IF WE NEED TO CONCEDE ANNUAL MONITORING FOR NT'S TO MAKE MONTHLY FOR EVERYONE GO AWAY, WE SHOULD. PUTTING IT ON THE TABLE NOW AND BEING FIRM ON IT WOULD BE MI'S VOTE.

Happy New Year!

Rich

Ohio Environmental Protection Agency Unless otherwise provided by law,

Ohio Environmental Protection Agency Unless otherwise provided by law, this communication and any response to it constitutes a public record.

Date January 12, 2011

Mr. Tom Grubbs

USEPA Headquarters
Ariel Rios Building
1200 Pennsylvania Avenue, N. W.
Mail Code: 4607M
Washington, DC 20460

Dear Mr. Grubbs:

The States located within the United States Environmental Protection Agency (US EPA) Region 5 submit the following comments and recommendations for consideration in finalizing revisions to the Total Coliform Rule (TCR). The Region 5 State's are very concerned about the impacts this rule will have on the Public Water Supply Supervision Programs. Those concerns are magnified by the large number of public water systems located in the Region.

Nationally it is estimated that there are 153,530 public water supplies. Region 5 State's have responsibility for 45,425 public water supplies (29% of the national number). Of these public water supplies 38,010 are noncommunity public water supplies, representing about 40 % of the noncommunity public water supplies (TNC PWS) in the Nation. The majority of noncommunity transient systems in Region 5 are on an annual total coliform monitoring frequency (67% or 22,286 systems). Comparing the existing monitoring frequency of noncommunity systems in Region 5 to a quarterly monitoring or monthly monitoring frequency under the RTCR represents an 86% and 458% increase in sample collection respectively (with Minnesota expecting a 825% increase). Two States within Region 5, Michigan and Wisconsin have the largest number of public water supplies in the country (23,036 systems). All Region 5 states fall within the top 12 states nationally for the number of public water supplies.

The Region 5 States cannot support the Revised Total Coliform Rule (RTCR) as written. As proposed, the RTCR creates unnecessary resource burdens without accompanying public health gains. The RTCR also fails to recognize the significant public health protection achieved through the Ground Water Rule's (GWR) focus on microbial contamination of source waters, particularly for those public water systems with limited distribution systems (LDS). On balance, the RTCR is not as protective of public health for these systems as the existing rule (See individual state comments). While each of the Region 5 States submitted comments during the formal comment period, we are sending this joint letter to emphasize those changes we believe are essential for successful implementation of the rule.

The Region 5 States can support changes to the RTCR that builds on the existing TCR and GWR through a "find and fix" regulatory framework. The Region 5 States agree the key to improved public health protection is the 'find and fix" approach and validation of the fix working. States must be provided the flexibility to retain their state requirements of "find and fix" responses and authorities to address total coliform positives that focus on approaches that have proven to work through years of implementing the current TCR. The Region 5 States' proposed changes listed below: 1) satisfy the principals of the AIP, 2) are as stringent as the proposed RTCR, 3) create better rule structure for more effective implementation, 4)provide improved linkage to existing

1

Formatted: Right: 0.25"

regulations, and 5) improve public health protection through more effective use of state and system resources.

1. Revisions to the TCR need a better connection to the (GWR) for public water supplies (population less than 1000) with a limited distribution system (LDS). Region 5 States proposes defining these water supplies as follows:
    - Systems with limited distribution systems are those groundwater public water supplies serving a population of 1000 or fewer that consist solely of well discharge piping, service connections and/or building plumbing for the purpose of conveying potable water to points of use located only on property owned or controlled by the supplier of water. Public water supplies that have piping in the public road right of way, hydrants other than on the well discharge piping, gravity storage tanks, or piping that crosses property lines shall not be considered limited distribution systems.
2. For public water supplies with limited distribution systems the best opportunity to increase public health protection is to focus on potential source water issues. US EPA needs to use and build upon the existing "find and fix" approach of the GWR. The GWR already has a framework for triggering investigations and requiring corrective actions. US EPA needs to recognize that existing regulatory framework by revising 40 CFR 141. 859 as described below.

    - Specify that the "find and fix" approach required under the GWR, as well as any state specific actions as provided under the next bullet, is the first triggered assessment under 141.859(b) for LDS. An escalated response is required based on additional triggers exceeded and any state specific action requirements.

    - Eliminate the specific details on assessments and corrective actions required in response to total coliform positives and instead require a description of state response actions. US EPA needs to allow states to specify in their primacy application what escalating assessments, corrective action requirements and adequacy determinations are appropriate based on the specifics of any public water system. US EPA should continue to finalize the Assessments and Corrective Actions Guidance Manual to assist states.

    - 40 CFR 142.16, should be amended to provide for states to specify that state maximum contaminant (MCL) response actions, used to implement the federal TCR in place prior to [the date of final RTRC adoption], are part of their assessment and corrective actions.

3. Eliminate the increased monitoring based solely on the failure to monitor as defined in "clean compliance history".

Formatted: Right: 0.25"

4. Simplify the process of increasing and decreasing monitoring under the RTCR by:
    - Allow existing enforcement mechanisms to address to failure to monitor;
    - Eliminate "and one" requirement to return to a reduced monitoring schedule.
    - Maintain baseline monitoring as quarterly for all public water systems
    - Maintain transition using current monitoring
    - New systems will be required to follow baseline monitoring (quarterly) for at least one year.
    - Reduced monitoring to annual is permitted for groundwater TNC PWS with a population less than 1, 000 persons which meet the following criteria:
        a. Have an annual site visit
        b. No significant deficiencies
        c. Have at least one total coliform sample in the last 12 months
        d. No E. coli positive samples in the last 12 months
        e. No more than one total coliform positive sample in the last 12 months.
    - Monthly monitoring is only triggered when:
        a. E. Coli_ Acute MCL
        b. Two Level 1 triggers in 12 months
    - Monthly monitoring continues until 6 months of total coliform negative samples are collected

5. Revise the grant formula. A revision to the grant formula is necessary even with the recommended changes of Region 5 States, but is essential if no changes are made. Non-community water systems are not part of EPA's evaluation of achieving strategic plan objectives. The RTCR will create new resource requirements and/or redirect existing resources to NCWS negatively impacting the ability of states, with high numbers of NCWS, to meet EPA's strategic objectives. In order to allow states sufficient financial resources to meet the strategic objectives the grant allocation formula should be restructured. We recommend increasing the multiplier for TNC in the PWS grant allotment formula to 0.20 while decreasing the allotment formula for community and NTNC to 0.50.

6. Region 5 State's firmly hope that these recommended revisions can be made. If not US EPA will need to provide states the ability to request extensions to the timeline of implementing the RTCR.

Region 5 States have Safe Drinking Water Act responsibility for 45,425 public water supplies, approximately 29% of all public water supplies in the nation. Because of the large number of public water supplies, especially those water supplies serving 1,000 persons or less, the proposed RTCR will impact Region 5 states disproportionately than any other Region in the nation. We thank US EPA in advance for consideration to our recommendations. All of the Region 5 State's drinking water administrators are available to answer questions to state specific comments submitted during the public comment period. We have chosen Pat Carroll as the contact for the Region 5 State's if clarification or additional information is needed to the comments and recommendations of this letter. Pat Carroll can be reached at (317) 308-3281.

Hello all

The document has been revised to address the consistency issues of the acronyms. We will go without the letterhead as there are states where the logo may be changing. In the final document we will try to have all of the signatures on a single page. Please review your signature block to make sure it is correct. (I just want to make sure something has not been lost in the cut and paste). The final paragraph has been edited to include a contact for the Region 5 states. There is general agreement that the letter can now be sent to Region 5 staff. If I hear no objections I will send a copy of the draft (minus signatures) to Miguel Wednesday.

When you send me your signature block I will use this as your stamp of approval the document is ready to sign. I have a signature block from Illinois.

Two additional questions

1 Do we want to request a meeting with Tom Grubbs to further discuss these issues? We did make that request when a common letter signed by all Region 5 State's was sent for the proposed GWR. This resulted US EPA holding a two day meeting in DC to discuss the States issues. Almost all states had representation at the meeting.

2. Do we brief ASDWA on our request? If so when? The March ASDWA meeting (general session and Board meeting) will be a good time to get everyone at the table.

Thanks

Jerry

Morning All,

I originally replied only to Jerry so thought I should share my thoughts. I suggested we clean up the acronym "stuff" so it was consistent throughout the document.

Other comments:

I support having a contact (and it being Pat----Thanks).

Electronic signature (pdf) is okay with me.

We also have a letterhead change going on---so I'm in the same boat as Mike on that one.

Once we finalize---okay to give it to the Region.

I agree having a contact is a good idea and thanks Pat for volunteering.

Clarification, are we using electronic signatures or are we circulating the letter. Electronic signatures (i.e. pdf) would clearly be quicker.

It is a little tough to provide the Ohio EPA letterhead right now as we are changing Governor and Director over the weekend.

Mike

>>> "CARROLL, PAT" <PCARROLL@idem.IN.gov> 1/7/2011 7:48 AM >>>

Jerry,

Thanks again for pulling this final together. Indiana is OK with sending this version. I have one suggestion for the last paragraph: should we put in a contact in case EPA wants clarification of one or more of our points? Since I bought it up, I'll volunteer to be a contact and would work with all of you to answer any question EPA may have. I'm also open on this and will go along with what we all decide on a inserting a contact.

I'm OK either way on letterhead: blank or the collective logos. I'll send our logo if we decide to go that way.

I'd vote for some sort of electronic signature, but will go along with what the group decides.

As soon as we all approve of the final, we should give it to Region 5

Good morning all

Attached is the final draft (yeah and a toss of confetti). The letter still needs formatting and that task has been given to our support staff. The track change is still on in case there are still changes to be made. Can everyone please send me their signature block. If you have already done so can you please resend as a couple of my archive email files were lost and I have someone trying to recover them. It will be faster if you resend the signature block.

Do we want the letter to go out with out a letterhead? One option would be to paste the logo from each state at the top of the letter.

Do the directors want to route the letter for signature or use electronic signatures?

Are we okay to send an advance copy of the letter to Region 5?

Thanks

Jerry

Happy New everyone

I have changed the letter to incorporate Beth's comment in paragraph 3.

Regarding the Section 2 comment, I need to defer to Jill and Lee as this was language from their December 15 and 16 email attachments. I am good with dropping from the second bullet "What is needed is a compliance response path for total coliform positives that focuses on GWR responses for the initial confirmed total coliform positive and has an escalated response for additional confirmed total coliform positive results" Jill/Lee are you okay with dropping this sentence? If not can you please address Beth/Mike's questions.

I suggest keeping "state actions" in the first bullet under Section 2.

I had not thought about this until Jill sent me her electronic signature, I am wondering do all the drinking water administrators want to sign the letter electronically or route the letter and sign?

If there are no further comments I will send the final draft to everyone Wednesday for one last review and okay.

Thanks

Jerry

Subject: RE: Recap - MI Comments

Hey All,
Mike is out this week, but I got his input on this via email and I've combined our comments. The comments are tracked in the attached. The first comment in paragraph 3 is pretty straightforward.

The other comments are in Section #2. We weren't sure what it was trying to say. I think if you remove the sentences, it still gets the point across. Also in the first bullet under #2, we don't think it needs to refer to state actions again since it's in the above paragraph.

Mike would like to see the final version before sign off.

Thanks,
Beth

>>> "Overmyer, Rich (DNRE)" <OVERMYERR@michigan.gov> 12/27/2010 3:26 PM >>>

All,

Yes, thanks to everyone for their work on this especially Jerry & Beth. Pat's last draft to Mikes revision looks good. Just note we should be consistent in the "1000 or less" population cutoff (eliminate the "less than 1000"). Also the 3rd bullet under item 4 should be: Maintain baseline monitoring as quarterly for all *groundwater systems serving 1000 or less.* (Not all pws).

1. Is this a draft that we can now share with the Region? YES

2. Is this proposal all or nothing? What happens if US EPA is okay with the simplified monitoring process but does not consider dropping the monitoring and reporting from clean compliance history? NO, NOT ALL OR NOTHING BEING ABLE TO KEEP OUR FIND & FIX PROCESS IS VERY IMPORTANT. HOWEVER, MI ESTIMATES A 60-70% VIOLATION RATE IF MONTHLY MONITORING STAYS IN AS PROPOSED. I SUSPECT THAT WOULD MEAN MASS REFERRALS TO EPA FOR ENFORCEMENT OF MOST M&R VIOLATIONS.

3. By using "significant deficiency" as part of reduced monitoring are we saying it is not necessary to define "sanitary defect"? WE DON'T NEED ANOTHER DEFINITION.

4. Is it okay to drop the following in #2? "Failure to follow Ground Water Rule would trigger a RTCR Level 1 Assessment. A second Level 1 trigger within a rolling 12-month period would trigger Level 1 Assessment and a third Level1 trigger would require a Level 2 assessment" If not, I need clarification of what is meant by failure to follow GWR? MIKES VERSION WORKS.

5. Do we need to provide comments or proposed definition of season system, clean compliance history, sanitary defect? NO, NOT AT THIS STAGE. LET'S NOT MAKE THIS OVERLY DETAILED.

6. Is it possible to open up the reduced monitoring to NTNCWS as well as TNCWS? The reason I ask is based on my conversation last week with Miguel. In this case we may be able to get a little more. It is still possible that through the rule negotiations that we may need settle for only transient noncommunity systems. Miguel just needs to know our initial and fall back positions. MI HAS ALMOST 1500 NT'S BUT IT IS DIFFICULT FOR US TO ARGUE VERY CONVINCINGLY TO JUSTIFY ANNUAL COLIFORM MONITORING FOR THEM. WE UNDERSTAND IT'S A LITTLE DIFFERENT FOR MN'S PROGRAM THAT IS SET UP BASED ON ANNUAL SITE VISITS & MONITORING FOR THE SYSTEMS. OUR TAKE ON THIS IS MONTHLY MONITORING IS NOT AN EFFICIENT USE OF SCARCE PUBLIC HEALTH RESOURCES. IF WE NEED TO CONCEDE ANNUAL MONITORING FOR NT'S TO MAKE MONTHLY FOR EVERYONE GO AWAY, WE SHOULD. PUTTING IT ON THE TABLE NOW AND BEING FIRM ON IT WOULD BE MI'S VOTE.

Happy New Year!

Rich

Hey All,
Mike is out this week, but I got his input on this via email and I've combined our comments. The comments are tracked in the attached. The first comment in paragraph 3 is pretty straightforward.

The other comments are in Section #2. We weren't sure what it was trying to say. I think if you remove the sentences, it still gets the point across. Also in the first bullet under #2, we don't think it needs to refer to state actions again since it's in the above paragraph.

Mike would like to see the final version before sign off.

Thanks,
Beth

>>> "Overmyer, Rich (DNRE)" <OVERMYERR@michigan.gov> 12/27/2010 3:26 PM >>>

All,

Yes, thanks to everyone for their work on this especially Jerry & Beth. Pat's last draft to Mikes revision looks good. Just note we should be consistent in the "1000 or less" population cutoff (eliminate the "less than 1000"). Also the 3rd bullet under item 4 should be: Maintain baseline monitoring as quarterly for all *groundwater systems serving 1000 or less.* (Not all pws).

1. Is this a draft that we can now share with the Region? YES
2. Is this proposal all or nothing? What happens if US EPA is okay with the simplified monitoring process but does not consider dropping the monitoring and reporting from clean compliance history? NO, NOT ALL OR NOTHING BEING ABLE TO KEEP OUR FIND & FIX PROCESS IS VERY IMPORTANT. HOWEVER, MI ESTIMATES A 60-70% VIOLATION RATE IF MONTHLY

MONITORING STAYS IN AS PROPOSED. I SUSPECT THAT WOULD MEAN MASS REFERRALS TO EPA FOR ENFORCEMENT OF MOST M&R VIOLATIONS.

3. By using "significant deficiency" as part of reduced monitoring are we saying it is not necessary to define "sanitary defect"? WE DON'T NEED ANOTHER DEFINITION.
4. Is it okay to drop the following in #2? "Failure to follow Ground Water Rule would trigger a RTCR Level 1 Assessment. A second Level 1 trigger within a rolling 12-month period would trigger Level 1 Assessment and a third Level1 trigger would require a Level 2 assessment" If not, I need clarification of what is meant by failure to follow GWR? MIKES VERSION WORKS.
5. Do we need to provide comments or proposed definition of season system, clean compliance history, sanitary defect? NO, NOT AT THIS STAGE. LET'S NOT MAKE THIS OVERLY DETAILED.
6. Is it possible to open up the reduced monitoring to NTNCWS as well as TNCWS? The reason I ask is based on my conversation last week with Miguel. In this case we may be able to get a little more. It is still possible that through the rule negotiations that we may need settle for only transient noncommunity systems. Miguel just needs to know our initial and fall back positions. MI HAS ALMOST 1500 NT'S BUT IT IS DIFFICULT FOR US TO ARGUE VERY CONVINCINGLY TO JUSTIFY ANNUAL COLIFORM MONITORING FOR THEM. WE UNDERSTAND IT'S A LITTLE DIFFERENT FOR MN'S PROGRAM THAT IS SET UP BASED ON ANNUAL SITE VISITS & MONITORING FOR THE SYSTEMS. OUR TAKE ON THIS IS MONTHLY MONITORING IS NOT AN EFFICIENT USE OF SCARCE PUBLIC HEALTH RESOURCES. IF WE NEED TO CONCEDE ANNUAL MONITORING FOR NT'S TO MAKE MONTHLY FOR EVERYONE GO AWAY, WE SHOULD. PUTTING IT ON THE TABLE NOW AND BEING FIRM ON IT WOULD BE MI'S VOTE.

Happy New Year!

Rich

Date January 12, 2011

Mr. Tom Grubbs

USEPA Headquarters
Ariel Rios Building
1200 Pennsylvania Avenue, N. W.
Mail Code: 4607M
Washington, DC 20460

Dear Mr. Grubbs:

The States located within the United States Environmental Protection Agency (US EPA) Region 5 submit the following comments and recommendations for consideration in finalizing revisions to the Total Coliform Rule (TCR). The Region 5 State's are very concerned about the impacts this rule will have on the Public Water Supply Supervision Programs. Those concerns are magnified by the large number of public water systems located in the Region.

Nationally it is estimated that there are 153,530 public water supplies. Region 5 State's have responsibility for 45,425 public water supplies (29% of the national number). Of these public water supplies 38,010 are noncommunity public water supplies, representing about 40 % of the noncommunity public water supplies (TNC PWS) in the Nation. The majority of noncommunity transient systems in Region 5 are on an annual total coliform monitoring frequency (67% or 22,286 systems). Comparing the existing monitoring frequency of noncommunity systems in Region 5 to a quarterly monitoring or monthly monitoring frequency under the RTCR represents an 86% and 458% increase in sample collection respectively (with Minnesota expecting a 825% increase). Two States within Region 5, Michigan and Wisconsin have the largest number of public water supplies in the country (23,036 systems). All Region 5 states fall within the top 12 states nationally for the number of public water supplies.

The Region 5 States cannot support the Revised Total Coliform Rule (RTCR) as written. As proposed, the RTCR creates unnecessary resource burdens without accompanying public health gains. The RTCR also fails to recognize the significant public health protection achieved through the Ground Water Rule's (GWR) focus on microbial contamination of source waters, particularly for those public water systems with limited distribution systems (LDS). On balance, the RTCR is not as protective of public health for these systems as the existing rule (See individual state comments). While each of the Region 5 States submitted comments during the formal comment period, we are sending this joint letter to emphasize those changes we believe are essential for successful implementation of the rule.

The Region 5 States can support changes to the RTCR that builds on the existing TCR and GWR through a "find and fix" regulatory framework. The Region 5 States agree the key to improved public health protection is the 'find and fix" approach and validation of the fix working. States must be provided the flexibility to retain their state requirements of "find and fix" responses and authorities to address total coliform positives that focus on approaches that have proven to work through years of implementing the current TCR. The Region 5 States' proposed changes listed below: 1) satisfy the principals of the AIP, 2) are as stringent as the proposed RTCR, 3) create better rule structure for more effective implementation, 4)provide improved linkage to existing

1

Formatted: Right: 0.25"

regulations, and 5) improve public health protection through more effective use of state and system resources.

1. Revisions to the TCR need a better connection to the (GWR) for public water supplies (population less than 1000) with a limited distribution system (LDS). Region 5 States proposes defining these water supplies as follows:
    - Systems with limited distribution systems are those groundwater public water supplies serving a population of 1000 or fewer that consist solely of well discharge piping, service connections and/or building plumbing for the purpose of conveying potable water to points of use located only on property owned or controlled by the supplier of water. Public water supplies that have piping in the public road right of way, hydrants other than on the well discharge piping, gravity storage tanks, or piping that crosses property lines shall not be considered limited distribution systems.
2. For public water supplies with limited distribution systems the best opportunity to increase public health protection is to focus on potential source water issues. US EPA needs to use and build upon the existing "find and fix" approach of the GWR. The GWR already has a framework for triggering investigations and requiring corrective actions. US EPA needs to recognize that existing regulatory framework by revising 40 CFR 141. 859 as described below.

    - Specify that the "find and fix" approach required under the GWR, as well as any state specific actions as provided under the next bullet, is the first triggered assessment under 141.859(b) for LDS. An escalated response is required based on additional triggers exceeded and any state specific action requirements.

    - Eliminate the specific details on assessments and corrective actions required in response to total coliform positives and instead require a description of state response actions. US EPA needs to allow states to specify in their primacy application what escalating assessments, corrective action requirements and adequacy determinations are appropriate based on the specifics of any public water system. US EPA should continue to finalize the Assessments and Corrective Actions Guidance Manual to assist states.

    - 40 CFR 142.16, should be amended to provide for states to specify that state maximum contaminant (MCL) response actions, used to implement the federal TCR in place prior to [the date of final RTRC adoption], are part of their assessment and corrective actions.

3. Eliminate the increased monitoring based solely on the failure to monitor as defined in "clean compliance history".

Comment [MB1]: Can we delete this highlight?

Formatted: Right: 0.25"

4. Simplify the process of increasing and decreasing monitoring under the RTCR by:
    - Allow existing enforcement mechanisms to address to failure to monitor;
    - Eliminate "and one" requirement to return to a reduced monitoring schedule.
    - Maintain baseline monitoring as quarterly for all non-community public water systems
    - Maintain transition using current monitoring
    - New systems will be required to follow baseline monitoring (quarterly) for at least one year.
    - Reduced monitoring to annual is permitted for groundwater TNC PWS with a population less than 1, 000 persons which meet the following criteria:
        a. Have an annual site visit
        b. No significant deficiencies
        c. Have at least one total coliform sample in the last 12 months
        d. No E. coli positive samples in the last 12 months
        e. No more than one total coliform positive sample in the last 12 months.
    - Monthly monitoring is only triggered when:
        a. E. Coli_ Acute MCL
        b. Two Level 1 triggers in 12 months
    - Monthly monitoring continues until 6 months of total coliform negative samples are collected

5. Revise the grant formula. A revision to the grant formula is necessary even with the recommended changes of Region 5 States, but is essential if no changes are made. Non-community water systems are not part of EPA's evaluation of achieving strategic plan objectives. The RTCR will create new resource requirements and/or redirect existing resources to NCWS negatively impacting the ability of states, with high numbers of NCWS, to meet EPA's strategic objectives. In order to allow states sufficient financial resources to meet the strategic objectives the grant allocation formula should be restructured. We recommend increasing the multiplier for TNC in the PWS grant allotment formula to 0.20 while decreasing the allotment formula for community and NTNC to 0.50.

6. Region 5 State's firmly hope that these recommended revisions can be made. If not US EPA will need to provide states the ability to request extensions to the timeline of implementing the RTCR.

Region 5 States have Safe Drinking Water Act responsibility for 45,425 public water supplies, approximately 29% of all public water supplies in the nation. Because of the large number of public water supplies, especially those water supplies serving 1,000 persons or less, the proposed RTCR will impact Region 5 states disproportionately than any other Region in the nation. We thank US EPA in advance for consideration to our recommendations. All of the Region 5 State's drinking water administrators are available to answer questions to state specific comments submitted during the public comment period. We have chosen Pat Carroll as the

Comment [EM2]: Quarterly for all pws? not just NCWS?

Formatted: Right: 0.25"

contact for the Region 5 State's if clarification or additional information is needed to the comments and recommendations of this letter. Pat Carroll can be reached at (317) 308-3281.

Thank you Jerry,

I've included a handful of "clean-up" suggestions in "tracked" changes. Additionally, I'm confused with the 2nd sentence of our second paragraph. I'm not sure when we mean NCWS and TNCWS. Jerry, could you take a look at it?

To answer Jerry's questions:

1. I lean toward a conference call; or perhaps someone wants to come to our spring Chicago Region V meeting and talk with us???
2. I suggest we send a copy to ASDWA once signed. I'm sure it will come up during the Board meeting, however I'm willing to request the discussion if people prefer.

Jill

Hello all

The document has been revised to address the consistency issues of the acronyms. We will go without the letterhead as there are states where the logo may be changing. In the final document we will try to have all of the signatures on a single page. Please review your signature block to make sure it is correct. (I just want to make sure something has not been lost in the cut and paste). The final paragraph has been edited to include a contact for the Region 5 states. There is general agreement that the letter can now be sent to Region 5 staff. If I hear no objections I will send a copy of the draft (minus signatures) to Miguel Wednesday.

When you send me your signature block I will use this as your stamp of approval the document is ready to sign. I have a signature block from Illinois.

Two additional questions

1 Do we want to request a meeting with Tom Grubbs to further discuss these issues? We did make that request when a common letter signed by all Region 5 State's was sent for the proposed GWR. This resulted US EPA holding a two day meeting in DC to discuss the States issues. Almost all states had representation at the meeting.

2. Do we brief ASDWA on our request? If so when? The March ASDWA meeting (general session and Board meeting) will be a good time to get everyone at the table.

Thanks

Jerry

Morning All,

I originally replied only to Jerry so thought I should share my thoughts. I suggested we clean up the acronym "stuff" so it was consistent throughout the document.

Other comments:

I support having a contact (and it being Pat----Thanks).

Electronic signature (pdf) is okay with me.

We also have a letterhead change going on---so I'm in the same boat as Mike on that one.

Once we finalize---okay to give it to the Region.

I agree having a contact is a good idea and thanks Pat for volunteering.

Clarification, are we using electronic signatures or are we circulating the letter. Electronic signatures (i.e. pdf) would clearly be quicker.

It is a little tough to provide the Ohio EPA letterhead right now as we are changing Governor and Director over the weekend.

Mike

>>> "CARROLL, PAT" <PCARROLL@idem.IN.gov> 1/7/2011 7:48 AM >>>

Jerry,

Thanks again for pulling this final together. Indiana is OK with sending this version. I have one suggestion for the last paragraph: should we put in a contact in case EPA wants clarification of one or more of our points? Since I bought it up, I'll volunteer to be a contact and would work with all of you to answer any question EPA may have. I'm also open on this and will go along with what we all decide on a inserting a contact.

I'm OK either way on letterhead: blank or the collective logos. I'll send our logo if we decide to go that way.

I'd vote for some sort of electronic signature, but will go along with what the group decides.

As soon as we all approve of the final, we should give it to Region 5

My signature block is:

Subject: FInal draft DW Administrators letter to EPA
Importance: High

Good morning all

Attached is the final draft (yeah and a toss of confetti). The letter still needs formatting and that task has been given to our support staff. The track change is still on in case there are still changes to be made. Can everyone please send me their signature block. If you have already done so can you please resend as a couple of my archive email files were lost and I have someone trying to recover them. It will be faster if you resend the signature block.

Do we want the letter to go out with out a letterhead? One option would be to paste the logo from each state at the top of the letter.

Do the directors want to route the letter for signature or use electronic signatures?

Are we okay to send an advance copy of the letter to Region 5?

Thanks

Jerry

Happy New everyone

I have changed the letter to incorporate Beth's comment in paragraph 3.

Regarding the Section 2 comment, I need to defer to Jill and Lee as this was language from their December 15 and 16 email attachments. I am good with dropping from the second bullet "What is needed is a compliance response path for total coliform positives that focuses on GWR responses for the initial confirmed total coliform positive and has an escalated response for additional confirmed total coliform positive results" Jill/Lee are you okay with dropping this sentence? If not can you please address Beth/Mike's questions.

I suggest keeping "state actions" in the first bullet under Section 2.

I had not thought about this until Jill sent me her electronic signature, I am wondering do all the drinking water administrators want to sign the letter electronically or route the letter and sign?

If there are no further comments I will send the final draft to everyone Wednesday for one last review and okay.

Thanks

Jerry

Date January 12, 2011

Mr. Tom Grubbs

USEPA Headquarters
Ariel Rios Building
1200 Pennsylvania Avenue, N. W.
Mail Code: 4607M
Washington, DC 20460

Dear Mr. Grubbs:

The States located within the United States Environmental Protection Agency (US-EPA) Region 5 submit the following comments and recommendations for consideration in finalizing revisions to the Total Coliform Rule (TCR). The Region 5 State's are very concerned about the impacts this rule will have on the Public Water Supply Supervision Programs. Those concerns are magnified by the large number of public water systems located in the Region.

Nationally it is estimated that there are 153,530 public water supplies. Region 5 State's have responsibility for 45,425 public water supplies (29% of the national number). Of these public water supplies 38,010 are noncommunity public water supplies (NCWS), representing about 40 % of the noncommunity public water supplies (TNC PWS) in the Nation. The majority of noncommunity transient systems in Region 5 are on an annual total coliform monitoring frequency (67% or 22,286 systems). Comparing the existing monitoring frequency of noncommunity systems in Region 5 to a quarterly monitoring or monthly monitoring frequency under the RTCR represents an 86% and 458% increase in sample collection respectively (with Minnesota expecting a 825% increase). Two States within Region 5, Michigan and Wisconsin have the largest number of public water supplies in the country (23,036 systems). All Region 5 Sstates fall within the top 12 states nationally for the number of public water supplies.

Comment [JJ1]: This doesn't make sense to me.

The Region 5 States cannot support the Revised Total Coliform Rule (RTCR) as written. As proposed, the RTCR creates unnecessary resource burdens without accompanying public health gains. The RTCR also fails to recognize the significant public health protection achieved through the Ground Water Rule's (GWR) focus on microbial contamination of source waters, particularly for those public water systems with limited distribution systems (LDS). On balance, the RTCR is not as protective of public health for these systems as the existing rule (See individual state comments). While each of the Region 5 States submitted comments during the formal comment period, we are sending this joint letter to emphasize those changes we believe are essential for successful implementation of the rule.

The Region 5 States can support changes to the RTCR that builds on the existing TCR and GWR through a "find and fix" regulatory framework. The Region 5 States agree the key to improved public health protection is the 'find and fix" approach and validation of the fix working. States must be provided the flexibility to retain their state requirements of "find and fix" responses and authorities to address total coliform positives that focus on approaches that have proven to work through years of implementing the current TCR. The Region 5 States' proposed changes listed below: 1) satisfy the principals of the Agreement In Principle (AIP), 2) are as stringent as the proposed RTCR, 3) create better rule structure for more effective implementation, 4) provide

Formatted: Right: 0.25"

improved linkage to existing regulations, and 5) improve public health protection through more effective use of state and system resources.

1. Revisions to the TCR need a better connection to the ~~(~~GWR~~)~~ for public water supplies (population less than 1000) with ~~a limited distribution system (~~LDS~~)~~. Region 5 States proposes defining these water supplies as follows:
    - Systems with limited distribution systems are those groundwater public water supplies serving a population of 1000 or fewer that consist solely of well discharge piping, service connections and/or building plumbing for the purpose of conveying potable water to points of use located only on property owned or controlled by the supplier of water. Public water supplies that have piping in the public road right of way, hydrants other than on the well discharge piping, gravity storage tanks, or piping that crosses property lines shall not be considered limited distribution systems.
2. For public water supplies with LDS,~~limited distribution systems~~ the best opportunity to increase public health protection is to focus on potential source water issues. US EPA needs to use and build upon the existing "find and fix" approach of the GWR. The GWR already has a framework for triggering investigations and requiring corrective actions. US EPA needs to recognize that existing regulatory framework by revising 40 CFR 141. 859 as described below.

    - Specify that the "find and fix" approach required under the GWR, as well as any state specific actions as provided under the next bullet, is the first triggered assessment under 141.859(b) for LDS. An escalated response is required based on additional triggers exceeded and any state specific action requirements.

    - Eliminate the specific details on assessments and corrective actions required in response to total coliform positives and instead require a description of state response actions. US EPA needs to allow states to specify in their primacy application what escalating assessments, corrective action requirements and adequacy determinations are appropriate based on the specifics of any public water system. US EPA should continue to finalize the Assessments and Corrective Actions Guidance Manual to assist states.

    -

    - 40 CFR 142.16, should be amended to provide for states to specify that state maximum contaminant level (MCL) response actions, used to implement the federal TCR in place prior to [the date of final RTRC adoption], are part of their assessment and corrective actions.

3. Eliminate the increased monitoring based solely on the failure to monitor as defined in "clean compliance history".

Formatted: Right: 0.25"

4. Simplify the process of increasing and decreasing monitoring under the RTCR the following ways ~~by~~:
    - Allow existing enforcement mechanisms to address to failure to monitor;
    - Eliminate "and one" requirement to return to a reduced monitoring schedule;~~,~~
    - Maintain baseline monitoring as quarterly for all public water systems;
    - Maintain transition using current monitoring;
    - New systems will be required to follow baseline monitoring (quarterly) for at least one year;~~,~~
    - Reduced monitoring to annual is permitted for groundwater TNC PWS with a population less than 1, 000 persons which meet the following criteria:
        a. Have an annual site visit,
        b. No significant deficiencies,
        c. Have at least one total coliform sample in the last 12 months,
        d. No E. coli positive samples in the last 12 months,
        e. No more than one total coliform positive sample in the last 12 months;~~,~~
    - Monthly monitoring is only triggered when:
        a. E. Coli_ Acute MCL,
        b. Two Level 1 triggers in 12 months;
    - Monthly monitoring continues until 6 months of total coliform negative samples are collected.

5. Revise the grant formula. A revision to the grant formula is necessary even with the recommended changes of Region 5 States, and remains~~but is~~ essential if no changes are made. ~~Non-community water systems~~ NCWS are not part of EPA's evaluation of achieving strategic plan objectives. The RTCR will create new resource requirements and/or redirect existing resources to NCWS negatively impacting the ability of states, with high numbers of NCWS, to meet EPA's strategic objectives. In order to allow states sufficient financial resources to meet the strategic objectives, the grant allocation formula should be restructured. We recommend increasing the multiplier for TNC in the PWS grant allotment formula to 0.20 while decreasing the allotment formula for community and NTNC to 0.50.

6. Region 5 State's firmly hope that these recommended revisions can be made. If not US-EPA will need to provide states the ability to request extensions to the timeline of implementing the RTCR.

Region 5 States have Safe Drinking Water Act responsibility for 45,425 public water supplies, approximately 29% of all public water supplies in the nation. Because of the large number of public water supplies, especially those water supplies serving 1,000 persons or less, the proposed RTCR will impact Region 5 states disproportionately than any other Region in the nation. We thank US-EPA in advance for consideration to our recommendations. All of the Region 5 State's drinking water administrators are available to answer questions to state specific comments submitted during the public comment period. We have chosen Pat Carroll as the
